

## System ASIC TC190 Series CMOS ASICs

### 0.6μ 3.0/3.3V ASIC Family

The 0.6μm, 5V TC190 ASIC series provides higher system performance and device integration with lower power than previous generation 5V families. Highly accurate delay models, area efficient memory cells and a very fine pitch TAB bonding capability for high I/O requirements are some of the features of the family which consists of Gate Array (TC190G), Embedded Array (TC190E) and Standard Cell (TC190C) ASIC products. The TC190E is a gate array based product that incorporates the ability to embed large diffused cell based hardmacrocells and compilable cells (RAM, ROM, DAC, multipliers, PLLs, etc) rather than building metalized functions. This enables denser, faster, higher performance ASICs to be designed while still exhibiting quick “gate array” type turn around times.

### Benefits

- Advanced 0.6μm micron CMOS process with fast 240 gate delays.
- Reduction of gate power by as much as 20 percent over 0.8μm ASICs.
- 707,000 usable gates provide high levels of integration for improved performance and board area savings.
- Extensive libraries with a wide range of macrocells, compilable cells and megacells available.
- Library compatible with existing TC160G/170G gate arrays for ease of design migration to 0.6μm technology
- Design Kit support for a wide range of EDA environments.
- VERILOG-XL sign off capability.
- 62μ TAB pad pitch allows higher number of I/O per gate than previous product generations.
- A wide range of packages are available, including heat spreader plastic QFP, TABFP, BGA, tape BGA and others.
- New accurate delay modeling
- Verilog sign-off

### System Performance

The high density, high performance TC190 series ASIC family is manufactured using Toshiba’s 0.6μm double and triple layer complimentary metal-oxide silicon process. This family provides sub-micron ASIC density for pure 5V applications, and applications that are developed to transition over time to 3V. Typical applications are PC chipsets, graphics, telecommunications, networks, set top boxes and systems designed to migrate from 5V to 3V.

The 707K usable gates allow previously unobtainable levels of integration to be achieved on a 5V ASIC. The TC190 series supports many complex functions such as multipliers, DACs, ADCs, RAM, ROM and FIFOs.

The TC190 series offers Toshiba’s high quality and high capacity manufacturing expertise. A partnership with Toshiba

brings you not only the high quality and reliability ASICs, but fast prototype turnaround (3 day for gate array), steep production ramp-up and proven high volume manufacturing capacity.

### Packaging

The TC190 series wide range of packaging options provide a packaging solution for any requirement. New packages are continuously being developed. Contact your Toshiba sales representative for the Toshiba Packaging Book for specific package/pin count information.

### Features

TC190G	TC190E/C
- 22K – 707K usable gates	up to 730K
- 14 standard master sizes	21 standard master sizes
- up to 512 wire bonds	Same
- up to 776 TAB bond pads	
- 62μ Inner lead bond pads	Same
- Typical core power – 2.63μW/gate/Mhz	
- 180+ primitive cells (scan, standard, high drive cells)	Same
- 450+ I/O cells including (high drive {24mA} slew rate control high speed output buffers)	Same
Compiled cells – sync/async single, dual, triple port RAM, ROM	Same
- Hard macrocells including those for PCI bus interface are available. Some fast multipliers, adders, ALUs, UARTS timers and special I/O cells are in development.	
- Ability to embed large Compilable, fully diffused memory blocks provide higher performance and increased density.	Same

### TC190G Two Input NAND Gate Delay Performance

ND2 Gate Delay <sup>1</sup>	Fanout = 2	Fanout = 4	Fanout = 6
Typical <sup>2</sup>	240ps	336ps	432ps
Worst Case <sup>3</sup>	406ps	568ps	731ps

### Power Dissipation

<b>at 5V</b>	<b>Power = 2.63μW/gate/MHz</b>
--------------	--------------------------------

**NOTE 1:** These typical numbers are for estimation purposes only. Power dissipation is dependent on wire loading and gate switching rates.

## TC190G Gate Array Product Summary

Reference	Usable Gates		I/O Pads		
	DLM	TLM	Wirebond Pads	TAB 62μm	TAB 83μm
TC190G02/ 52	12,000	22,000	80	160	120

## Clock Distribution Network

Toshiba implements clock distribution networks in ASIC designs using a variety of different topologies including loop, grid, tree or trunk. The actual topology used depends on the desired clock skew specification and other design criteria such as power consumption limits and available gates. Typical on-chip skew delays

will be less than 0.5ns. Toshiba plans to offer tighter links between logical and physical; design processes, i.e. synthesis, floor planning and layout, which will further enable designers to optimize their designs.

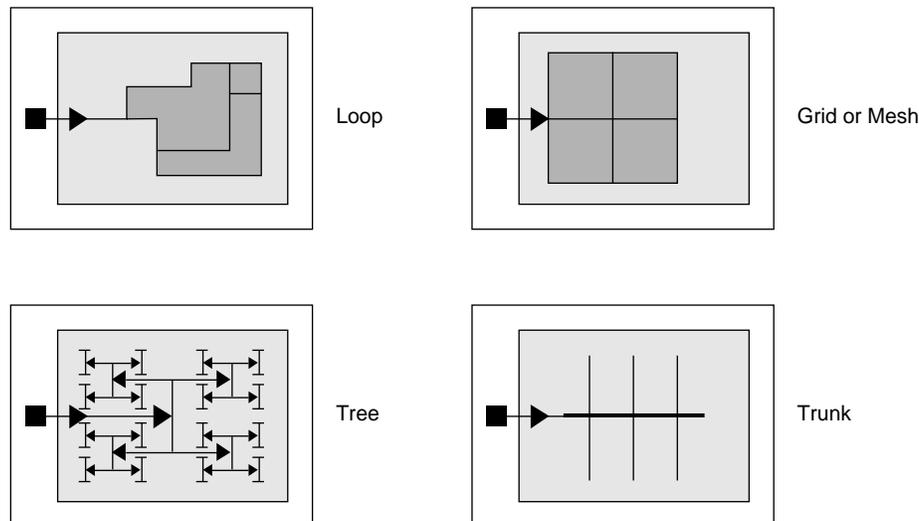

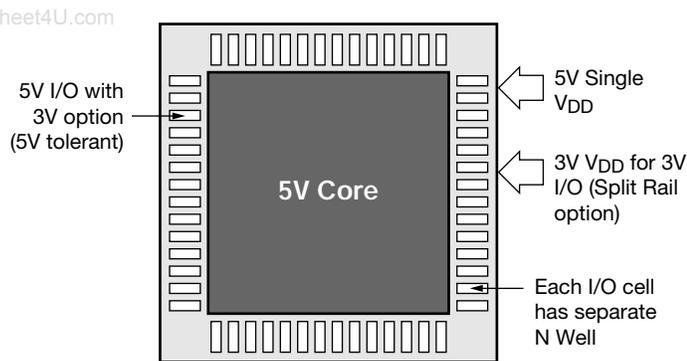

Figure 1. Clock Delay and Skew Control Layout Topologies

## TC190 Series Architecture

### Advantages

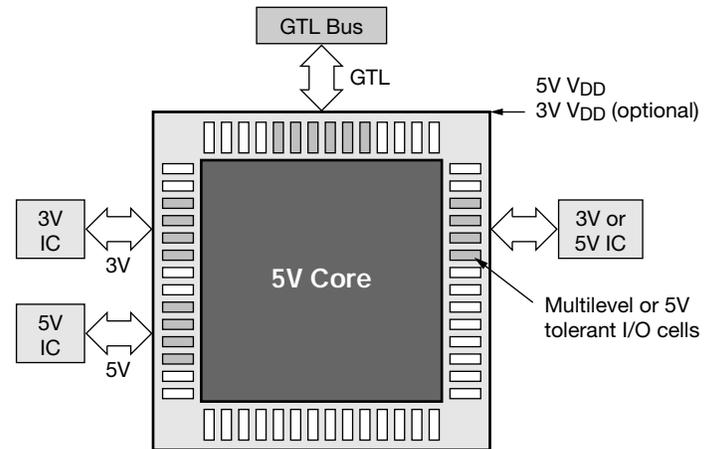

- 3V I/O available with 3Volt  $V_{DD}$  option
- 3V/5V I/O buffer  $V_{DD}$  can be switched if required
- No restrictions on 3/5V I/O placement

## TC190 Series Mixed Voltage Interface Option

### Applications

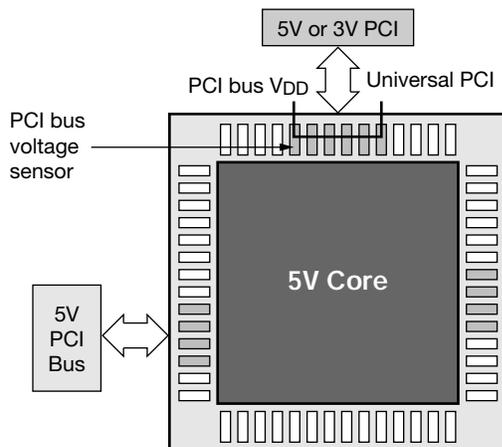

- PC chipsets
- Graphics
- Telecommunications
- Networks
- Set Top boxes
- Systems designed to migrate from 5V to 3V memory

## TC190 Series PCI Interface Option

### Universal PCI Buffers

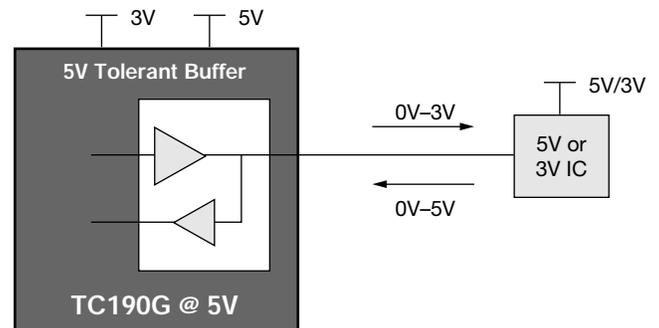

- Will interface to 5V or 3V PCI bus
- Change levels dependent on bus  $V_{DD}$
- No restrictions on I/O placement

## 5V Tolerant I/Os

### 5V Tolerant Interface

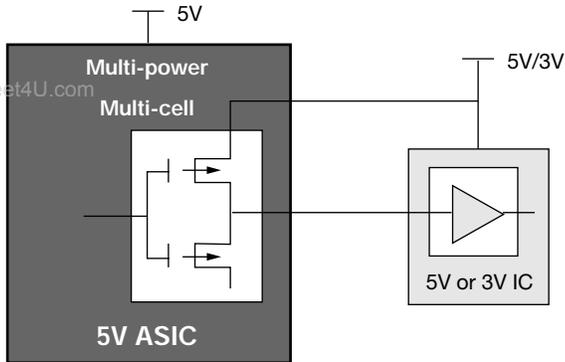

- 5V tolerant:  
OUTPUT: 0V–3V output level could be connected to 5V bus  
INPUT: 0V–5V input level could be connected to 5V bus
- No placement restrictions

## Mixed 3V/5V Support

### Multilevel Interface Cell Technology – TC160G/TC170G (TC190G)

- 5V/3V full level interface with multi-power
- High speed operation:  
Driver:  $T_{pd}$ : 6ns max (high speed type) @ 50pF load  
Receiver:  $T_{pd}$ : 4ns max @ F0=5
- No placement restrictions
- Power sequence requirement: 5V, then 3V

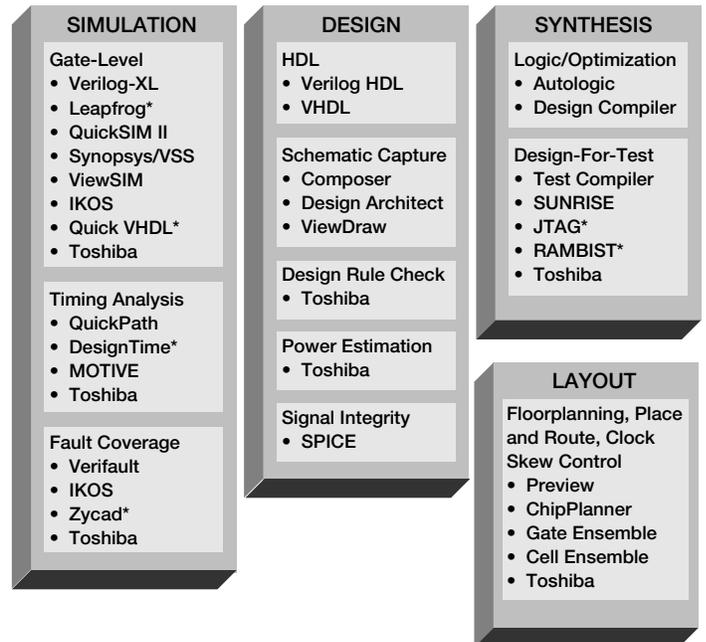

## EDA Libraries and Design Kits

The TC190 series is supported by two design environments:

- The Toshiba traditional EDA system based on distributed delay models
- The Toshiba Non-Linear Delay Model (NDM), which uses pin to pin timing and table lookup while taking into account the input slew rate as well as output load capacities.

Designers can use the traditional EDA option or the Verilog NDM sign-off system for the TC190 series. The libraries are upward compatible with the Toshiba 0.8 $\mu$ m ASIC family, thus reducing the effort needed when transferring a design from 0.8 $\mu$ m to 0.6 $\mu$ m technologies.

## Toshiba Design Environment II

The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of TOSHIBA or others. 021023\_C

TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc. 021023\_A

The Toshiba products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These Toshiba products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc. Unintended Usage of Toshiba products listed in this document shall be made at the customer's own risk. 021023\_B

The products described in this document may include products subject to the foreign exchange and foreign trade laws. 021023\_F

The products described in this document may contain components made in the United States and subject to export control of the U.S. authorities. Diversion contrary to the U.S. law is prohibited. 021023\_H

TOSHIBA products should not be embedded to the downstream products which are prohibited to be produced and sold, under any law and regulations. 030519\_Q
