

54ACTQ841

Quiet Series 10-Bit Transparent Latch with TRI-STATE® Outputs

General Description

The 'ACTQ841 bus interface latch is designed to eliminate the extra packages required to buffer existing latches and provide extra data width for wider address/data paths or buses carrying parity. The '841 is a 10-bit transparent latch, a 10-bit version of the '373. The 'ACTQ841 utilizes NSC Quiet Series technology to guarantee quiet output switching and improved dynamic threshold performance, FACT Quiet Series™ features GTO™ output control and undershoot corrector in addition to a split ground bus for superior performance.

Features

- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Inputs and outputs on opposite sides of package allow easy interface with microprocessors
- Improved latch-up immunity
- Outputs source/sink 24 mA

Connection Diagrams

Functional Description

The 'ACTQ841 consists of ten D-type latches with TRI-STATE outputs. The flip-flops appear transparent to the data when Latch Enable (LE) is HIGH. This allows asynchronous operation, as the output transition follows the data in transition.

On the LE HIGH-to-LOW transition, the data that meets the setup and hold time is latched. Data appears on the bus when the Output Enable ($\overline{OE}$) is LOW. When $\overline{OE}$ is HIGH the bus output is in the high impedance state.

H = HIGH Voltage Level
 L = LOW Voltage Level
 X = Immaterial
 Z = High Impedance
