Hex D flip-flop with enable 74F378

FEATURES

- 6-bit high-speed parallel register
- Positive edge-triggered D-type inputs
- Fully buffered common Clock and Enable inputs
- Input clamp diodes limit high speed termination effects
- Fully TTL and CMOS compatible

TYPE	TYPICAL f_{max}	TYPICAL SUPPLY CURRENT (TOTAL)
74F378	100MHz	35mA

DESCRIPTION

The 74F378 has six edge-triggered D-type flip-flops with individual D inputs and Q outputs. The common buffered Clock (CP) input loads all flip-flops simultaneously when the Enable ($\overline{E}$) input is Low.

The register is fully edge-triggered. The state of each D input, one setup time before the Low-to-High clock transition is transformed to the corresponding flop-flop's Q output. The $\overline{E}$ input must be stable one setup time prior to the Low-to-High clock transition for predictable operation.

I_{CC}	Supply current (total)	I_{CCH}	V_{CC} = MAX			32	45	mA
		I_{CCL}				35	45	mA

Notes:

1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
2. All typical values are at V_{CC} = 5V, T_{amb} = 25°C.
3. Not more than one output should be shorted at a time. For testing I_{OS}, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, I_{OS} tests should be performed last.

Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.
