# 74LVX32 Low Voltage Quad 2-Input OR Gate

#### **Features**

#### ■ Input voltage level translation from 5V to 3V

- Ideal for low power/low noise 3.3V applications
- Guaranteed simultaneous switching noise level and dynamic threshold performance

## **General Description**

The LVX32 contains four 2-input OR gates. The inputs tolerate voltages up to 7V allowing the interface of 5V systems to 3V systems.

## **Ordering Information**

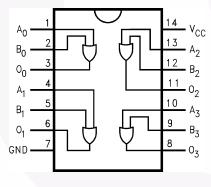

| Order<br>Number | Package<br>Number | Package Description  |
|-----------------|-------------------|--|
| 74LVX32M        | M14A              | 14-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow |
| 74LVX32SJ       | M14D              | 14-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide                |
| 74LVX32MTC      | MTC14             | 14-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide  |

Device also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering number.

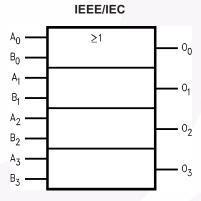

All packages are lead free per JEDEC: J-STD-020B standard.

## **Connection Diagram**

## **Logic Symbol**

## **Pin Description**

| Pin                             | Names | Description |
|---------------------------------|-------|-------------|
| A <sub>n</sub> , B <sub>n</sub> |       | Inputs      |
| O <sub>n</sub>                  |       | Outputs     |

## **Absolute Maximum Ratings**

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

| Symbol                              | Parameter                                      | Rating                          |
|-------------------------------------|--|---------------------------------|
| V <sub>CC</sub>                     | Supply Voltage                                 | -0.5V to +7.0V                  |
| I <sub>IK</sub>                     | DC Input Diode Current, V <sub>I</sub> = -0.5V | –20mA                           |
| V <sub>I</sub>                      | DC Input Voltage                               | -0.5V to 7V                     |
| I <sub>OK</sub>                     | DC Output Diode Current                        |                                 |
|                                     | $V_{O} = -0.5V$                                | –20mA                           |
|                                     | $V_{O} = V_{CC} + 0.5V$                        | +20mA                           |
| V <sub>O</sub>                      | DC Output Voltage                              | -0.5V to V <sub>CC</sub> + 0.5V |
| I <sub>O</sub>                      | DC Output Source or Sink Current               | ±25mA                           |
| I <sub>CC</sub> or I <sub>GND</sub> | DC V <sub>CC</sub> or Ground Current           | ±50mA                           |
| T <sub>STG</sub>                    | Storage Temperature                            | −65°C to +150°C                 |
| Р                                   | Power Dissipation                              | 180mW                           |

# Recommended Operating Conditions<sup>(1)</sup>

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

| Symbol          | Parameter                | Rating                |
|-----------------|--------------------------|-----------------------|
| V <sub>CC</sub> | Supply Voltage           | 2.0V to 3.6V          |
| V <sub>I</sub>  | Input Voltage            | 0V to 5.5V            |
| Vo              | Output Voltage           | 0V to V <sub>CC</sub> |
| T <sub>A</sub>  | Operating Temperature    | –40°C to +85°C        |
| Δt / ΔV         | Input Rise and Fall Time | 0ns/V to 100ns/V      |

### Note:

1. Unused inputs must be held HIGH or LOW. They may not float.

## **DC Electrical Characteristics**

|                 |                              |                 |  | T <sub>A</sub> = +25°C |      |      | 40°C to<br>5°C |      |       |
|-----------------|------------------------------|-----------------|--|------------------------|------|------|----------------|------|-------|

#### Note:

3. Parameter guaranteed by design  $t_{OSLH} = |t_{PLHm} - t_{PLHn}|$ ,  $t_{OSHL} = |t_{PHLm} - t_{PHLn}|$ 

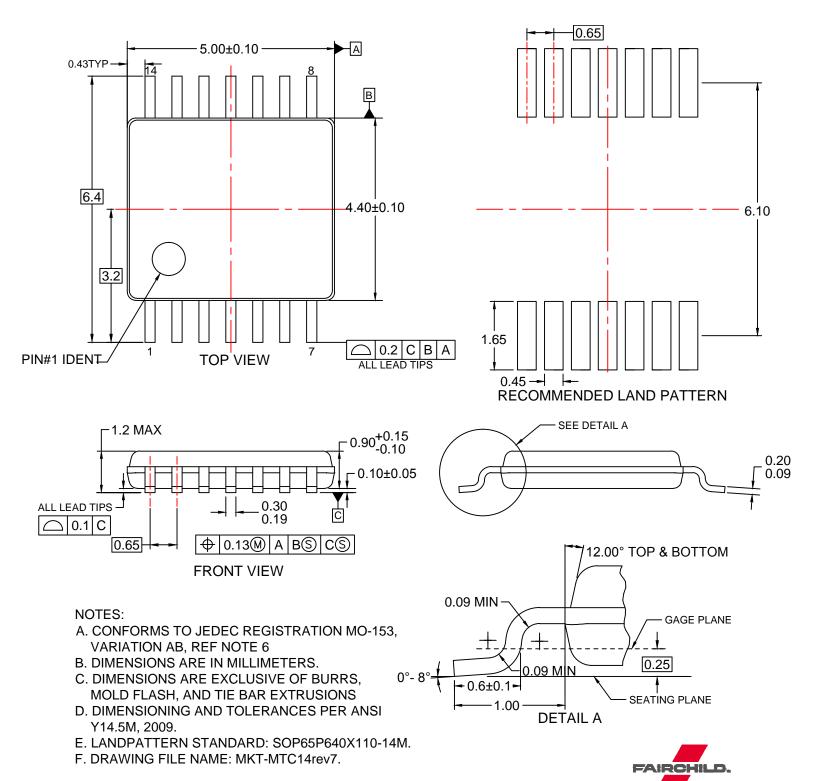

## Capacitance

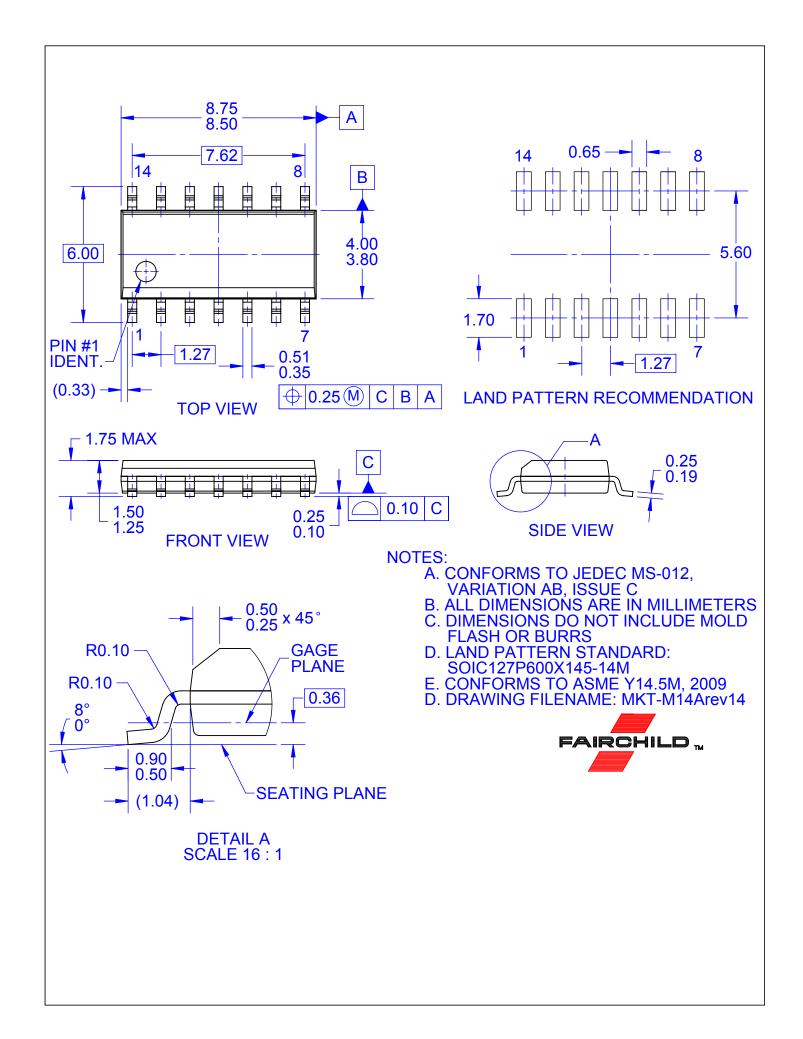

|                 |  | T <sub>A</sub> = +25°C |      | T <sub>A</sub> = -40°C to<br>+85°C |      |      |       |
|-----------------|--|------------------------|------|------------------------------------|------|------|-------|
| Symbol          | Parameter                                    | Min.                   | Тур. | Max.                               | Min. | Max. | Units |
| C <sub>IN</sub> | Input Capacitance                            |                        | 4    | 10                                 |      | 10   | pF    |
| C <sub>PD</sub> | Power Dissipation Capacitance <sup>(4)</sup> |                        | 14   |                                    |      |      | pF    |

#### Note:

4. C<sub>PD</sub> is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation:  $I_{CC(opr.)} = \frac{C_{PD} \times V_{CC} \times f_{IN} \times I_{CC}}{4 \text{ (per Gate)}}$
