

General Description

The 932SQL456 is a low power version of the CK420BQ synthesizer for Intel-based server platforms. It has 85 ohm Low-Power (LP) HCSL outputs that save 48 resistors and reduce power consumption by 50% compared to the standard CK420BQ. The 932SQL456 is driven with a 25MHz crystal for maximum performance. It generates CPU outputs of 100MHz. This device meets Separate- Reference-no-Spread (SRnS) PCIe requirements making it ideal for use in systems that need to communicate “outside the box”.

Recommended Application

Low-Power CK420BQ for SRnS PCIe Applications

Key Specifications

- CPU, SRC, NS_SRC and NS_SAS cycle-cycle jitter <50ps
- Output to output skew <50ps
- Phase jitter: PCIe Gen2 SRnS <2.2ps rms
- Phase jitter: PCIe Gen3 SRnS <0.7ps rms
- Phase jitter: QPI <0.3ps rms
- Phase jitter: NS-SAS <1.3ps rms using long period phase jitter method

Pin Configurations

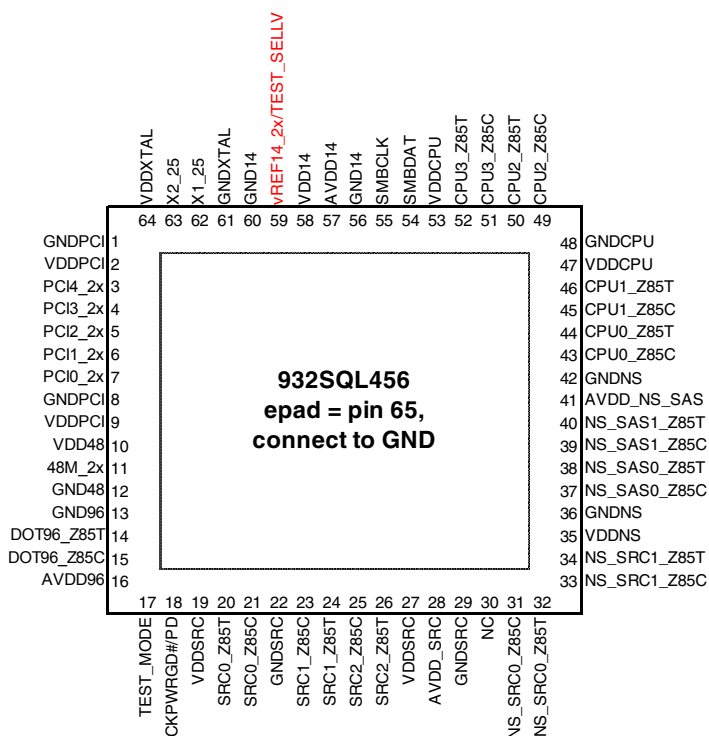

Features/Benefits

- Integrated 85-ohm differential terminations; saves 48 resistors compared to CK420BQ
- LP-HCSL outputs; up to 50% power savings compared to standard CK420BQ
- 64-pin TSSOP and VFQFPN packages; smallest board footprint
- Available in -40° to +85°C industrial temperature range version; supports demanding operating environments

Output Features

- Differential outputs are LP-HCSL with integrated 85Ω terminations
- 11 – *non-spreading* interchangeable 100MHz differential outputs
 - 4 – “CPU” outputs
 - 2 – “NS_SAS” outputs
 - 2 – “NS_SRC” outputs
 - 3 – “SRC” outputs
- 1 – DOT96 96MHz output
- 1 – 3.3V 48M output
- 5 – 3.3V PCI outputs
- 1 – 3.3V 14.318M output

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the 932SQL456. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

¹Guaranteed by design and characterization, not 100% tested in production. Z_O=85 Ω (differential impedance).

² Measured from differential waveform

³ Slew rate is measured through the Vswing voltage range centered around differential 0V. This results in a +/-150mV window around differential 0V.

⁴ Matching applies to rising edge rate for Clock and falling edge rate for Clock#. It is measured using a +/-75mV window centered on the average cross point where Clock rising meets Clock# falling. The median cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations.

⁵ Vcross is defined as voltage where Clock = Clock# measured on a component test board and only applies to the differential rising edge (i.e. Clock rising and Clock# falling).

⁶ The total variation of all Vcross measurements in any particular system. Note that this is a subset of V_cross_min/max (V_cross absolute) allowed. The intent is to limit Vcross induced modulation by setting V_cross_delta to be smaller than

⁷ Includes overshoot and undershoot.

⁸ Measured from single-ended waveform

⁹ Measured with scope averaging off, using statistics function. Variation is difference between min and max.

Revision History

Rev.	Issue Date	Who	Description	Page #
A	8/5/2015	RDW	1. Updated front page text and data sheet title. 2. Updated REF14 pin name to reflect 2x drive. 3. Update pin description for REF14 pin. 4. Moved block diagram to page 1 and pinouts to page 2. 5. Updated block diagram to incorporate crystal recommendations. 6. Updated Clock AC tolerance to reflected tightened c2c jitter specs on single ended outputs. 7. Updated Clock periods table accordingly. 8. Updated AC/DC Electrical tables with char data. 9. Updated package drawing to latest format for NLG64. 10. Move to final and release.	1-14,20
B	9/29/2015	RDW	1. Added I-temp device to data sheet 2. Changed max power down current from 6mA to 8mA 3. Slight updates to PCIe Gen2 Hi-band and SAS12G for -40C 4. Corrected typo in bit name of Byte 1, bit 7. 5. Updated marking diagrams to include I-temp devices 6. Updated ordering information to include I-temp devices.	1,9,12, 15,17, 22
