GENERAL DESCRIPTION

Aeroflex's ACT8512 is a radiation tolerant, 48 channel multiplexer MCM (multi-chip module) with electrostatic discharge (ESD) protection on all channel inputs.

The ACT8512 has been specifically designed to meet exposure to radiation environments. The multiplexer is available in a 96 lead High Temperature Co-Fired Ceramic (HTCC) Quad Flatpack (CQFP). It is guaranteed operational from -55°C to +125°C. Available screened in accordance with MIL-PRF-38534, the ACT8512 is ideal for demanding military and space applications.

ORGANIZATION AND APPLICATION

The ACT8512 consists of six 16 channel multiplexers arranged as shown in the Block Diagram. The ACT8512 design is inherently radiation tolerant.

The ACT8512 consists of forty-eight (48) channels addressable by bus A_0~A_3 in three 16 channel blocks, each block enabled separately. Each block connects the addressed channel to two outputs, "Output" and "Current". This technique enables selecting and reading a remote resistive sensor without the MUX resistance being part of the measurement. For grounded sensors, this is done by passing current to the sensor by means of the "Current" pin and reading the resultant voltage (proportional to the sensor resistance) at the "Output" pin.
