

## DESCRIPTION

The Accutek AK5368192W high density memory module is a CMOS dynamic RAM organized in 8192K x 36 bit words. The module consists of sixteen standard 4 Meg x 4 DRAMs and eight 4 Meg x 1 DRAMs, each in plastic SOJ packages. The assembly has 14 drams mounted on the front side and 10 drams mounted on the back side of a printed circuit board in a 72 pad leadless SIM configuration.

This configuration allows socket-mounting of large quantities of memory in applications where high density and ease of inserting additional memory are important.

The operation of the AK5368192W is identical to sixteen 4M x 4 plus eight 4M x 1 Drams. There are four  $\overline{\text{CAS}}$  lines and four  $\overline{\text{RAS}}$  lines. On each bank of 4M x 36, independent byte control is accomplished by four  $\overline{\text{CAS}}$  lines. Each separate  $\overline{\text{CAS}}$  line controls two 4M x 4 Drams along with a 4M x 1 Dram with data in tied to data out to form a 9 bit byte. Two banks of 36 bits are controlled by the two pairs of  $\overline{\text{RAS}}$  lines. An eighteen bit data path can be produced by connecting DQ<sub>0</sub> to DQ<sub>18</sub>, DQ<sub>1</sub> to DQ<sub>19</sub>, etc. and alternately strobing RAS<sub>0</sub> with RAS<sub>1</sub> and RAS<sub>2</sub> with RAS<sub>3</sub>.
