

AME78XX

1A Positive Linear Regulator

■ General Description

The AME78XX is a fixed output positive regulator. The regulator can provide local on card regulation, eliminating the distribution problems associated with single point regulation. The AME78XX can be used in logic systems, instrumentation, HiFi, and other solid state electronic equipments. When used as a Zener diode/resistor combination replacement, the AME78XX usually results in an effective output impedance improvement of two orders of magnitude, and lower quiescent current.

With adequate heat sinking the AME78XX can deliver 1A output current. Current limiting is included to limit the peak output current to a safe value.

The AME78XX is available in the plastic TO-220 and TO-252 packages.

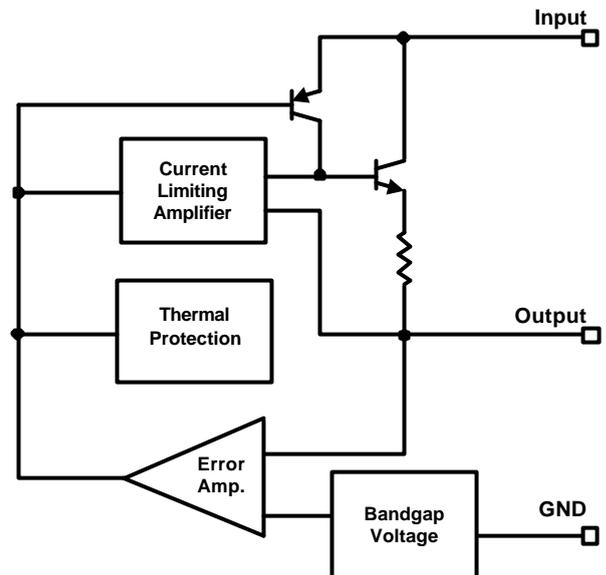

■ Features

- Guaranteed 1A Output
- Fixed Output Voltage
- Typical Line Regulation $\leq 20\text{mV}$
- Accurate to Within $\pm 5\%$
- Internal Short Circuit Current-Limiting
- TO-220 and TO-252 Packages

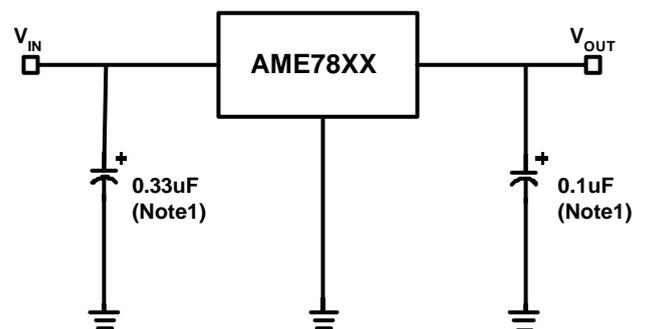

■ Applications

- Post Regulation for Switching Supply
- Microprocessor Power Supply
- Mother Board I/O Power Supply
- Battery Power Circuit
- Instrument

■ Functional Block Diagram

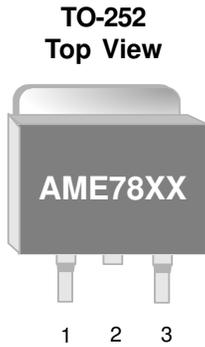

■ Typical Application

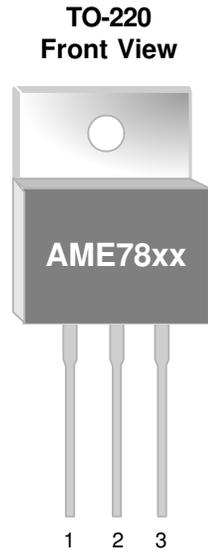

Note1: Bypass Capacitors are recommended for optimum stability and transient response and should be located as close as possible to the regulator
