

# AN3664NFB

Single chip audio signal processing IC for HiFi VCR

## ■ Overview

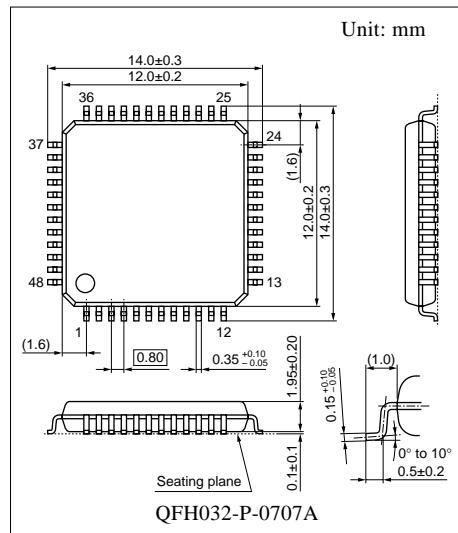

The AN3664NFB is a single chip IC which performs HiFi VCR stereo audio signal processing. It incorporates the PROM to maintain an adjusting value, enabling a complete adjustment-free use.

## ■ Features

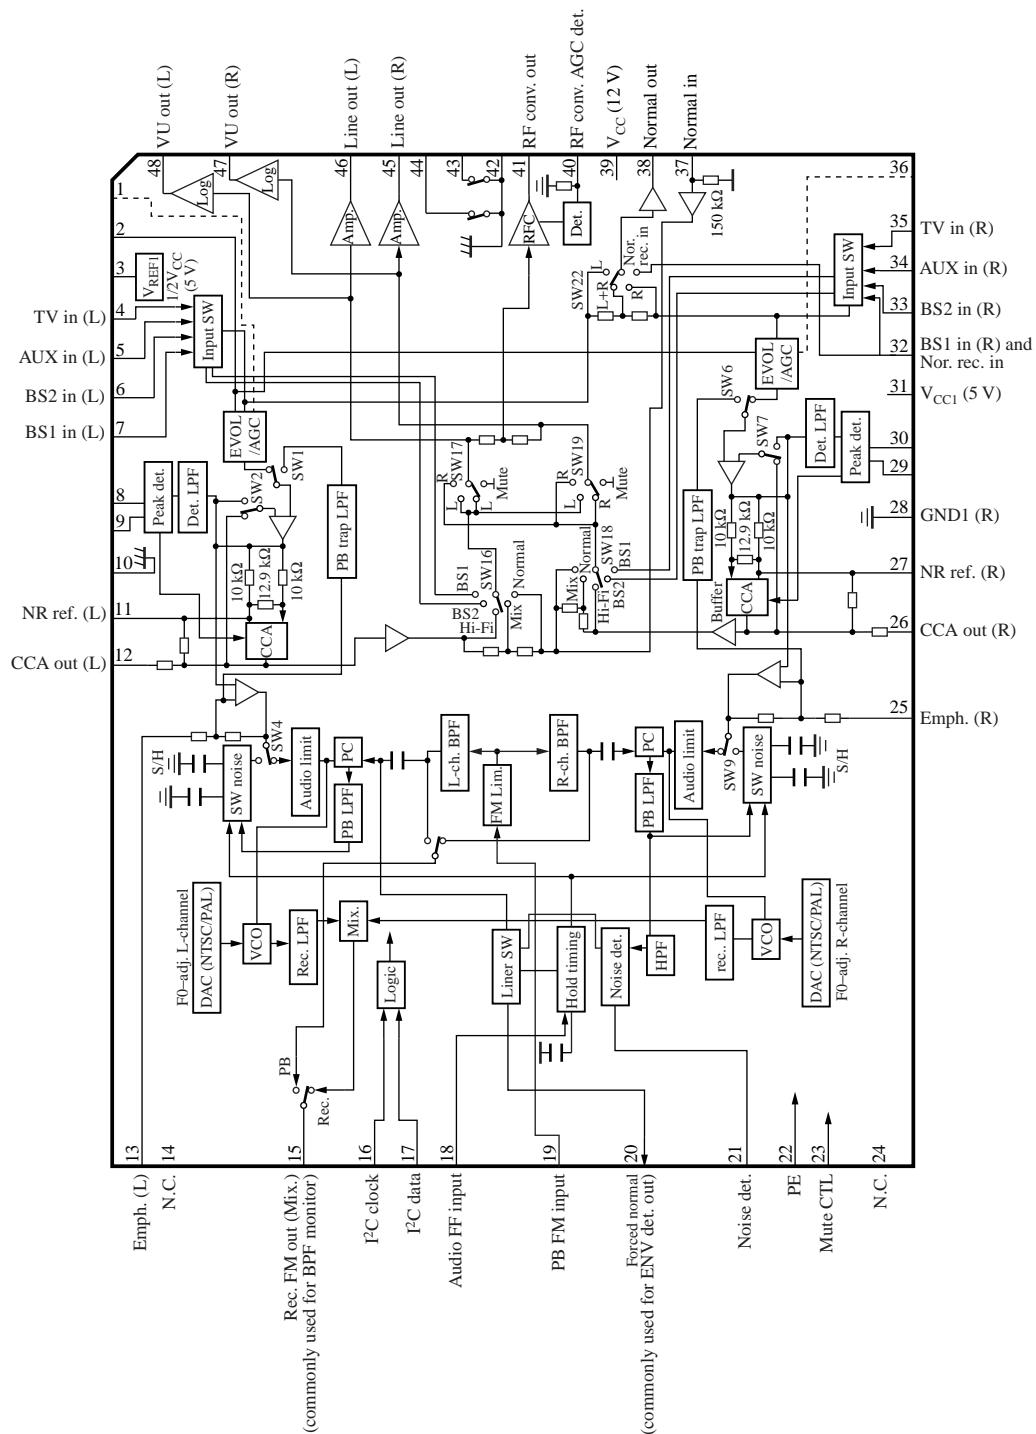

- High precision and adjustment-free  $f_O$ , recording/play-back level and playback BPF by adoption of built-in Zener zap PROM
- Enhanced cost performance due to incorporating external parts.

## ■ Applications

- HiFi VCR

## ■ Absolute Maximum Ratings

| Parameter                        | Symbol    | Rating      | Unit |
|----------------------------------|-----------|-------------|------|
| Supply voltage                   | $V_{CC1}$ | 5.5         | V    |
|                                  | $V_{CC2}$ | 13.0        |      |
| Power dissipation *1, 2          | $P_D$     | 639         | mW   |
| Operating ambient temperature *1 | $T_{opr}$ | -20 to +75  | °C   |
| Storage temperature *1           | $T_{stg}$ | -55 to +150 | °C   |

Note) 1. The reverse insertion of this IC will cause its breakdown.

2. \*1: Except for the power dissipation, operating ambient temperature and storage temperature, all ratings are for  $T_a = 25^\circ\text{C}$ .

\*2: The power dissipation shown is the value for  $T_a = 75^\circ\text{C}$ .

Note) \*1: Described as 21-pin DC voltage.

\*2: Used for the inspection.

## 5. Usage notes

## Serial data transmission

You need to send the start and stop conditions every time you send one line of data.

To change a serial mode setting, you have only to send one line of data on the part to be changed.

<Example: in case of sending all data of four lines>

## ■ Application Circuit Example
