

High-Density, +5.5V Capable DPDT Analog Switches

Features

- **– Negative Audio and Video Signal Capable**
- **– -0.3V to +5.5V Analog Signal Range Independent from VCC**
- **– On-Resistance 0.2W (typ)**
- **– +2.9V to +5.5V Single-Supply Range**
- **– Click-and-Pop Suppression**
- **Smooth Switch Transition**
- **– Break-Before-Make Operation**
- **Low Supply Current 30mA (typ) at 2.9V**
- **– Can be Powered by a GPIO**
- **– High-Impedance Mode When VCC Not Applied**
- **ESD Protection on NC_ and NO_**
- **– ±15kV Human Body Model**
- **WLCSP1.2x1.2-9 (1.2mm x 1.2mm) Package**
- **40°C to +85°C Operating Temperature Range**

General Description

The APL3157 is a high-density, double-pole/ double-throw (DPDT) analog switch which allows signals from -0.3V to +5.5V to pass without distortion even when the power supply is below the signal range. The low RON resistance (0.2Ω) makes the devices ideal for low-distortion switching, such as audio.

The APL3157 has internal shunt switches that discharge the audio amplifier AC-coupling capacitance at the normally open (NO1 and NO2) terminals. This feature reduces click-and-pop sounds that occur when switching audio signals between precharged points.

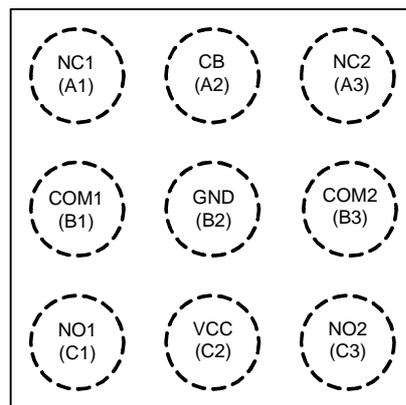

The switches are fully specified to operate from a single +2.9V to +5.5V power supply. Because of the low supply current requirement, V_{cc} can be provided by a GPIO. When the power is not applied, switches go to a high-impedance mode and all analog signal ports can withstand signals from -0.3V to +5.5V. The devices control the switches with a control bit, CB.

The APL3157 is available in a 1.2mm x 1.2mm, 0.4mm pitch, 9-bump wafer-level package (WLCSP), and operate over the -4°C to +85°C extended temperature range.

Applications

- **Smartphones**
- **Tablets**
- **Portable Audio/Video Equipment**
- **Portable Navigation Devices**

Note : ANPEC lead-free products contain molding compounds/die attach materials and 100% matte tin plate termination finish; which are fully compliant with RoHS. ANPEC lead-free products meet or exceed the lead-free requirements of IPC/JEDEC J-STD-020D for MSL classification at lead-free peak reflow temperature. ANPEC defines "Green" to mean lead-free (RoHS compliant) and halogen free (Br or Cl does not exceed 900ppm by weight in homogeneous material and total of Br and Cl does not exceed 1500ppm by weight).

Note1: Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note2: All specifications are 100% production tested at $T_A = +25^\circ C$, unless otherwise noted. Specifications are over $-40^\circ C$ to $+85^\circ C$ and are guaranteed by design.

Note3: The same limits apply for $V_{COM_L} = -5.5V$ to $+5.5V$ and are guaranteed by design.

Note4: $DR_{ON(MAX)} = |R_{ON(CH1)} - R_{ON(CH2)}|$.

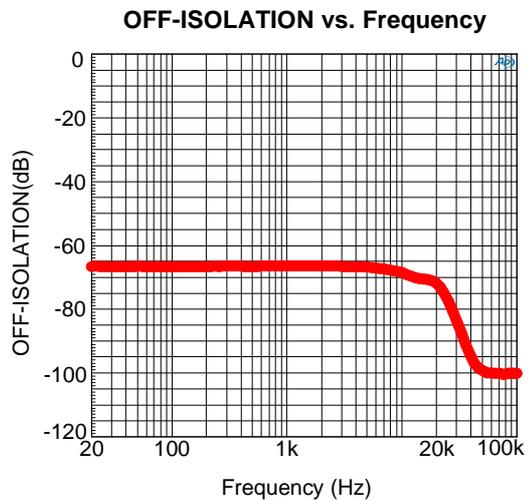

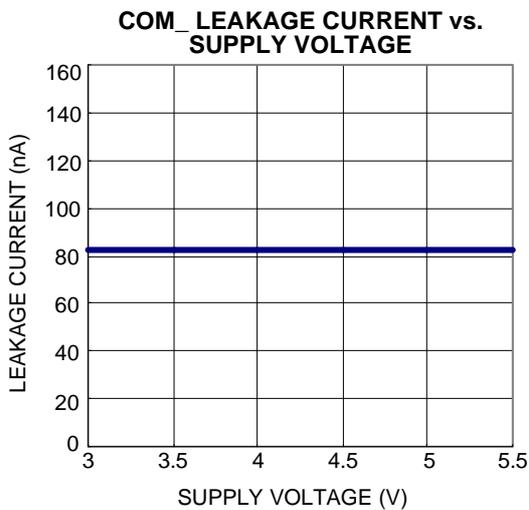

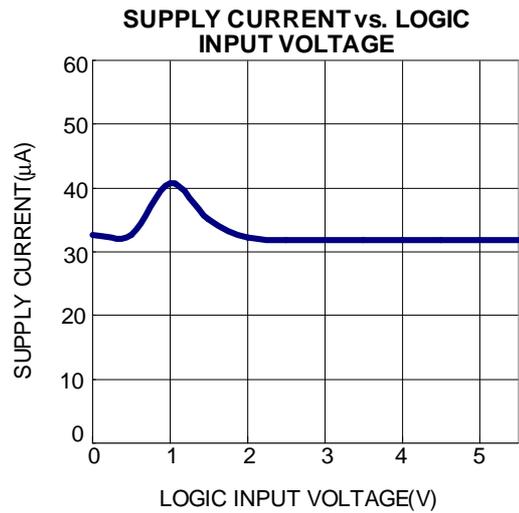

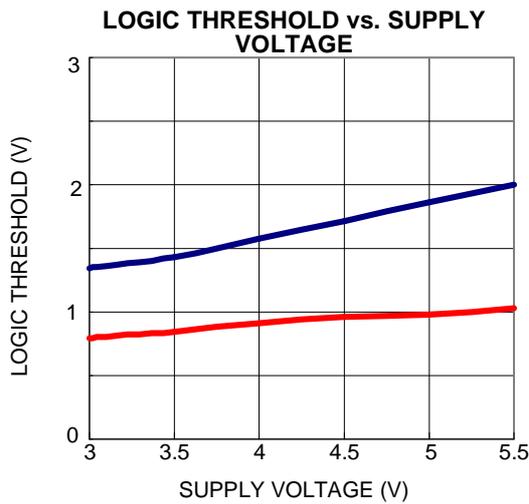

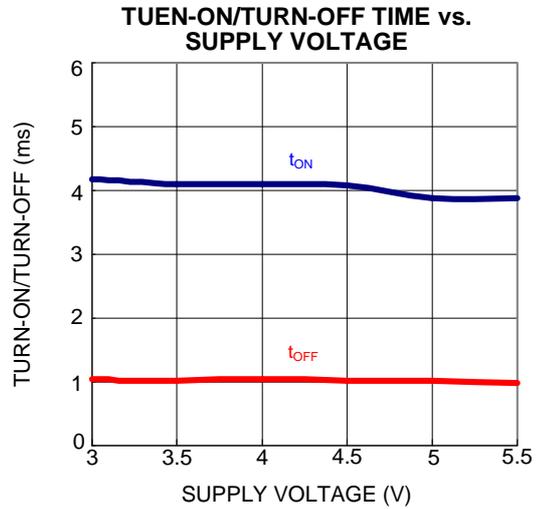

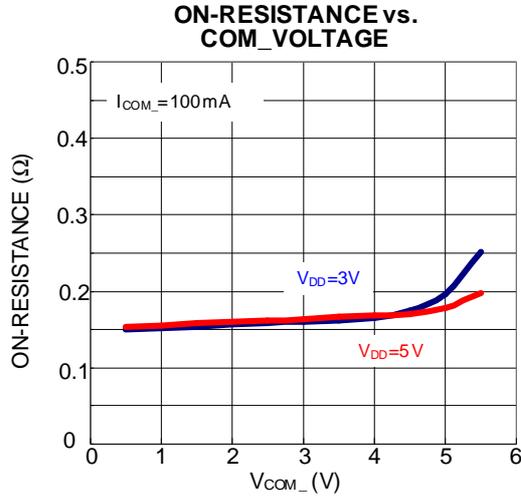

Note5: Guaranteed by design; not production tested.

Note6: Flatness is defined as the difference between the maximum and minimum value of on-resistance, as measured over specified analog signal ranges.

Note7: Between two switches.
