BDS/GPS/GNSS INTEGRATED FRONT-END MODULE WITH LOW NOISE AMPLIFIER AND FILTER

FEATURES

- Low Noise Figure: 1.7dB;
- High power gain: 17dB typical @ 1.575 GHz
- Low current consumption: 6.9mA
- RF input/output impedance 50ohm
- Supply voltage: 1.5V-3.6V
- Operation frequency range: 1550MHz-1615MHz
- Small DFN (6-pin, 1.5mm x 1.0 mm) package
- 3kV HBM ESD protection (including RFIN and RFOUT pin)
- High Out-Of-Band jammer rejection at Cellular/PCS/WLAN bands
- Fully-integrated module without any component at input/output side

APPLICATIONS

- Small phones, Feature Phones;
- Tablet PCs;
- Personal Navigation Devices;
- Complete GPS/BDS chipset modules;
- Theft protection(laptop, ATM)
- Smart watch and other mobile devices

GENERAL DESCRIPTION

The AW5105 is a Front-End Module (FEM) with a fully integrated Low-Noise Amplifier and Pre-Filter for BDS/GPS/GNSS. The AW5105 requires no external capacitor/inductor, reduces assembly complexity and the PCB area, enabling a cost-effective solution.

The AW5105 achieves low noise figure, high gain, excellent linearity and high Out-Of-Band rejection. All these feature make AW5105 an excellent choice for GNSS LNA as it improves sensitivity with low noise figure and high gain, provides better immunity against out-of-band jammer signals with high linearity, and reduces filtering requirement of preceding stage and hence reduces the overall cost of the GNSS receiver.

The AW5105 is provided in a compact 1.5mm x 1.0mm, 6-pin DFN package.

NOTE1: Conditions out of those ranges listed in "absolute maximum ratings" may cause permanent damages to the device. In spite of the limits above, functional operation conditions of the device should within the ranges listed in "recommended operating conditions". Exposure to absolute-maximum-rated conditions for prolonged periods may affect device reliability.

NOTE2: The human body model is a 100pF capacitor discharged through a $1.5k\Omega$ resistor into each pin. Test method: MIL-STD-883G Method 3015.7

APPLICATION INFORMATIONS

Choice of components

Take Figure 1 for example:

The AW5105 includes an internal switch to turn off the entire chip: apply logic high to EN to turn on, and a logic low to shut down.

The output of AW5105 is internally matched to 50 ohm and a DC blocking capacitor is integrated on-chip, thus no external component is required at the output.

The AW5105 should be placed close to the GPS antenna. Use 50- ohm microstrip lines to connect RF INPUT and RF OUTPUT. Bypass capacitor should be located close to the device. For long Vcc lines, it may be necessary to add more decoupling capacitors. Proper grounding of the GND pins is very important.
