

SAW Components

Data Sheet B3562

Data Sheet

An abstract graphic featuring the word "EPCOS" in large, glowing, 3D letters. The letters are white with a bright, circular highlight in the center of each, giving them a three-dimensional appearance. They are set against a dark, textured background that includes a faint, glowing globe and circuitry patterns, suggesting a high-tech or electronic theme.

SAW Components

B3562

Low-loss Filter

424,825 MHz

Data Sheet

Ceramic package **QCC8C**

Features

- RF low-loss filter for remote control receivers
- Package for **Surface Mounted Technology (SMT)**
- Balanced and unbalanced operation possible

Terminals

- Ni, gold plated

typ. dimensions in mm, approx. weight 0,1 g

Pin configuration

- 1 Input Ground
- 2 Input
- 5 Output
- 6 Output Ground
- 7 External coupling coil
- 4,8 Case-Ground
- 3 to be grounded

Type	Ordering code	Marking and package according to	Packing according to
B3562	B39421-B3562-U310	C61157-A7-A56	F61074-V8070-Z000

Electrostatic Sensitive Device (ESD)

Maximum ratings

Operable temperature range	T_A	-30/+85	°C
Storage temperature range	T_{stg}	-45/+90	°C
DC voltage	V_{DC}	0	V
Source power	P_S	0	dBm

SAW Components

B3562

Low-loss Filter

424,825 MHz

Data Sheet

Characteristics

Reference temperature:

$$T_A = 25\text{ °C}$$

Terminating source impedance:

$$Z_S = 50\ \Omega \text{ and matching network}$$

Terminating load impedance:

$$Z_L = 50\ \Omega \text{ and matching network}$$

		min.	typ.	max.	
Center frequency	f_C	—	424,825	—	MHz
(center frequency between 3 dB points)					
Minimum insertion attenuation	$\alpha_{\min}$	—	3,5	5,0	dB
424,68 ... 425,05 MHz					
(including loss in matching coils)					
Pass band (relative to $\alpha_{\min}$)		—	1,3	3,0	dB
424,68 ... 425,05 MHz					
Relative attenuation (relative to $\alpha_{\min}$)	α_{rel}				
10,00 ... 421,00 MHz					
421,00 ... 424,08 MHz					
424,08 ... 424,36 MHz					
426,00 ... 432,00 MHz					
432,00 ... 445,00 MHz					
445,00 ... 1000,00 MHz					
Impedance for pass band matching ²⁾					
Input: $Z_{\text{IN}} = R_{\text{IN}} \parallel C_{\text{IN}}$					
Output: $Z_{\text{OUT}} = R_{\text{OUT}} \parallel C_{\text{OUT}}$					
Temperature coefficient of frequency ¹⁾	TC_f	—	−0,03	—	ppm/K ²
Frequency inversion point	T_0	10	—	40	°C

¹⁾Temperature dependence of f_C : $f_C(T_A) = f_C(T_0) (1 + TC_f(T_A - T_0)^2)$

²⁾ Impedance for passband matching bases on an ideal, perfect matching of the SAW filter to source- and to load impedance (here 50 Ohm). After the SAW filter is removed and input impedance into the input matching / output matching network is calculated.

The conjugate complex value of these characteristic impedances are the input and output impedances for flat passband. For more details, we refer to EPCOS application note #4.

Data Sheet

Matching network to 50 Ω (element values depend on pcb layout and equivalent circuit)

Minimising the crosstalk

For a good ultimate rejection a low crosstalk is necessary. Low crosstalk can be realised with a good RF layout. The major crosstalk mechanism is caused by the "ground-loop" problem.

Grounding loops are created if input- and output transducer GND are connected on the top-side of the PCB and fed to the system grounding plane by a common via hole. To avoid the common ground path, the ground pin of the input- and output transducer are fed to the system ground plane (bottom PCB plane) by their own via hole. The transducers' grounding pins should be isolated from the upper grounding plane.

A common GND inductivity of 0.5nH degrades the ultimate rejection (crosstalk) by 20dB.

The optimised PCB layout, including matching network for transformation to 50 Ohm, is shown here. In this PCB layout the grounding loops are minimised to realise good ultimate rejection.

Optimised PCB layout for SAW filters in QCC8C package, pinning 2,5 (top side, scale 1:1)

The bottom side is a copper plane (system ground area). The input and output grounding pins are isolated and connected to the common ground by separated via holes.

For good contact of the upper grounding area with the lower side it is necessary to place enough via holes.
