

## DESCRIPTION

BL8078Q is a group of positive voltage output, low power consumption, low dropout voltage regulator. It can provide output value of 3.3V, 5.0V. It can provide up to 150mA output current when input / output voltage differential drops to 240mV ( $V_{OUT}=5V$ ), and it also provides foldback short-circuit protection, thermal protection and output current limit function. The maximum output current (150mA) must be used in the safe operation area. The very low power consumption of BL8078Q ( $I_Q=2.5\mu A$ ) can greatly improve natural life of batteries.

BL8078Q includes high accuracy voltage reference, error amplifier, current limit circuit and output driver module.

BL8078Q has well load transient response and good temperature characteristic, And it uses trimming technique to guarantee output voltage accuracy within  $\pm 2\%$ .

## EXPLANATION

BL8078Q is a series of low dropout voltage and low power consumption regulator. Its application circuit is very simple, which only needs two outside capacitors. It is composed of these modules: high accuracy voltage reference, current limit circuit, error amplifier, output driver and power transistor.

Current Limit module can keep chip and power system away from danger when load current is more than 180mA.

BL8078Q uses trimming technique to assure the accuracy of output value within  $\pm 2\%$ , at the same time, temperature compensation is elaborately considered in this chip, which makes BL8078Q's temperature coefficient within  $\pm 100\text{ppm}/^\circ\text{C}$ .
