**Description**

CD4093BMS consists of four Schmitt trigger circuits. Each circuit functions as a two input NAND gate with Schmitt trigger action on both inputs. The gate switches at different points for positive and negative going signals. The difference between the positive voltage (VP) and the negative voltage (VN) is defined as hysteresis voltage (VH) (see Figure 1).

The CD4093BMS is supplied in these 14 lead outline packages:

Braze Seal DIP	H4H
Frit Seal DIP	H1B
Ceramic Flatpack	H3W
