GENERAL DESCRIPTION

Display mode : 240 X 64 dots, graphic COG LCD module
 Interface : Serial
 Driving method : 1/65 duty, 1/7 bias
 Controller IC : SUNPLUS SPLC502A x 2
 For the detailed information, please refer to the IC specifications.

DISPLAY DATA RAM

The display data RAM is a RAM that stores the dot data for the display. It has a 65 (8 page x 8 bit +1) x 132-bit structure. It is possible to access the desired bit by specifying the page address and the column address. Because, as is shown in below, the DB7 - 0 display data from the MPU corresponds to the liquid crystal display common direction, there are few constraints at the time of display data transfer when multiple SPLC502A chips are used. Therefore, display structures can be created easily and with a high degree of freedom.

THE RESET CIRCUIT

When the RESET input comes to the 'L' level, these LSIs return to the default state. Their default states are as follows:

- 1). Display OFF
- 2). Normal display
- 3). ADC select: Normal (ADC command DB0 = 'L')
- 4). Power control register: (DB2, DB1, DB0) = (0, 0, 0)
- 5). Serial interface internal register data clear
- 6). LCD power supply bias rate: SPLC502A.....1/9 bias
- 7). All-indicator lamps-on OFF (All-indicator lamps ON/OFF command DB0 = 'L')
- 8). Power saving clear
- 9). V0 voltage regulator internal resistors, Ra and Rb, are connected.
- 10). Output conditions of SEG and COM terminals SEG: VSS, COM: VSS
- 11). Read modify write OFF
- 12). Static indicator OFF Static indicator register: (DB1, DB2) = (0, 0)
- 13). Display start line set to first line
- 14). Column address set to Address 0
- 15). Page address set to Page 0
- 16). Common output status normal

- 19). Test mode clear

INITIALIZATION FLOWCHART(With built-in power supply circuit)

Note1: The target time of 5ms varied depending on the panel characteristics and the capacitance of the smoothing capacitor. Therefore, we suggest users to conduct an operation check using the actual equipment.

HANDLING PRECAUTIONS

(1) CAUTION OF LCD HANDLING & CLEANING

The polarizing plate on the surface of the panel is made from organic substances. Be very careful for chemicals not to touch the plate or it leads the polarizing plate to deteriorate.

If the use of a chemical is unavoidable, wipe the panel lightly with soft materials, such as gauze and absorbent cotton, soaked in a solvent.

*Usable solvent: Alcohol (ethanol, IPA and the like)

*Appropriate solvent: Ketones, ethyl alcohol

Avoid wiping with a dry cloth, since it could damage the surface of the polarizing plate and others.

Do not expose to direct sunlight or fluorescent light for a long time.

(2) CAUTION AGAINST STATIC CHARGE

The LCD modules use CMOS LSI drivers, so customers are recommended that any unused input terminal would be connected to V_{DD} or V_{SS} , do not input any signals before power is turned on, and ground your body, work/assembly areas, assembly equipment to protect against static electricity.

(3) ESD PRECAUTION

Inputs and outputs are protected against electrostatic discharge in normal handling. However, to be totally safe, it is recommended to take normal precautions appropriate to handling LCM module. For example: product surface grounding.

Always take ESD precaution when handling the *LCD Module*. Components are exposed for direct finger touches and can be damaged unless ESD precaution is taken.

(4) PACKAGING

Avoid intense shock and falls from a height and do not operate or store them exposed to direct sunshine or high temperature/humidity for long periods.

(5) CAUTION FOR OPERATION

The viewing angle can be adjusted by varying the LCD driving voltage V_O .

Driving voltage should be kept within specified range, excess voltage shortens display life.

Response time increases with decrease in temperature.

Display may turn black or dark Blue at temperature above its operational range; this is however not destructive and the display will return to normal once the temperature falls back to range.

Mechanical disturbance during operation (such as pressing on the viewing area) may cause the segments to appear "fractured". They will recover once the display is turned off.

Condensation at terminals will cause malfunction and possible electrochemical reaction. Relative humidity of the environment should therefore be kept below 60%.

(6) SAFETY

Liquid crystal may leak out of a damaged LCD, it is recommended to wash off the liquid crystal by using solvents such as acetone or ethanol and should be burned up later.

If any liquid leak out of a damaged glass cell comes in contact with your hands, wash it off with soap and water immediately.

WARRANTY

CLOVER will replace or repair any of her LCD module in accordance with her LCD specification for a period of one year from date of shipment. The warranty liability of Clover is limited to repair and/or replacement. Clover will not be responsible for any subsequent or consequential event.
