

21-27.5GHz Power Amplifier

GaAs Monolithic Microwave IC in SMD leadless package

Description

The CHA6652-QXG is a three stage monolithic GaAs high power circuit producing 2 Watt output power. It is highly linear, with possible gain control and integrates a power detector. ESD protections are included. It is designed for Point To Point Radio. The circuit is manufactured with a pHEMT process, 0.15µm gate length. It is supplied in RoHS compliant SMD package.

36 lead 6x5 mm QFN package

Main Features

- Broadband performances: 21- 27.5GHz
- 33dBm saturated power
- 41dBm OIP3
- 20dB gain
- DC bias: Vd = 6.0Volt @ Id = 1.3A
- QFN 6x5
- MSL3

Device thermal performances

All the figures given in this section are obtained assuming that the QFN device is only cooled down by conduction through the package thermal pad (no convection mode considered).

The temperature is monitored at the package back-side interface (Tcase).

The system maximum temperature must be adjusted in order to guarantee that Tjunction remains below the maximum value specified in the Absolute Maximum Ratings table.

So, the system PCB must be designed to comply with this requirement.

⁽¹⁾ The package outline drawing included to this data-sheet is given for indication. Refer to the application note AN0017 (<https://www.ums-rf.com>) for exact package dimensions.

⁽²⁾ It is strongly recommended to ground all pins marked “Gnd” through the PCB board. Ensure that the PCB board is designed to provide the best possible ground to the package.

Definition of the Sij reference planes

The reference planes used for Sij measurements given above are symmetrical from the symmetrical axis of the package (see drawing beside). The input and output reference planes are located at 3.66mm offset (input wise and output wise respectively) from this axis. Then, the given Sij parameters incorporate the land pattern of the evaluation motherboard recommended in paragraph "Evaluation mother board".

Lead finish	100% matte tin (Sn)
MSL Rating	MSL3

Evaluation mother board

- Compatible with the proposed footprint.
- Based on typically Ro4350 / 10mils or equivalent.
- Using a micro-strip to coplanar transition to access the package.
- Recommended for the implementation of this product on a module board.
- Decoupling capacitors of 22pF $\pm 5\%$, 10nF $\pm 10\%$ and 1 μ F $\pm 10\%$ are recommended for the gate accesses.
- Decoupling capacitors of 100pF $\pm 5\%$, 10nF $\pm 10\%$ and 1 μ F $\pm 10\%$ are recommended for the drain accesses.
- A 10K Ω resistor is recommended on VREF & VDET accesses for the detector
- See application note AN0017 for details.

Notes

Due to ESD protection circuits on RF input and output, an external capacitance might be requested to isolate the product from external voltage that could be present on the RF accesses.

The DC connections do not include any decoupling capacitor in package, therefore it is mandatory to provide a good external DC decoupling (See paragraph "Evaluation mother board") on the PC board, as close as possible to the package.

A 10K Ω resistor is recommended in parallel to VDET, and VREF accesses.

The circuit includes ESD protections on all RF and DC leads

DC Schematic

Recommended UMS Power chain

The CHA6652-QXG is recommended with the CHA3395-QDG as driver.

Total Gain: 44dB

Gain control: 30dB with the both amplifiers.

For more information about the CHA3395-QDG, see our web site www.ums-gaas.com

Recommended package footprint

Refer to the application note AN0017 available at <https://www.ums-rf.com> for package footprint recommendations.

SMD mounting procedure

For the mounting process standard techniques involving solder paste and a suitable reflow process can be used. For further details, see application note AN0017.

Recommended environmental management

UMS products are compliant with the regulation in particular with the directives RoHS N°2011/65 and REACH N°1907/2006. More environmental data are available in the application note AN0019 also available at <https://www.ums-rf.com>.

Recommended ESD management

Refer to the application note AN0020 available at <https://www.ums-rf.com> for ESD sensitivity and handling recommendations for the UMS package products.
