

CPW2-0600-S008B

Gen 2 Silicon Carbide Schottky Diode

Description

This is the 2nd generation of high voltage, high performance Z-Rec[®] silicon carbide Schottky diode in a packageless bare die format to be implemented into any custom module design. The lower forward voltage, smaller reverse leakage current, zero reverse recovery, and high thermal conductivity make this Schottky diode ideal for high frequency switching applications including high density DC to DC converters. This Schottky diode can be used in conjunction with either IGBT or MOSFET as an anti-parallel diode, or as a rectifier.
