CMOS

Standard Cell

CS101 Series

■ DESCRIPTION

CS101 series, a 90 nm standard cell product, is a CMOS ASIC that satisfies user's demands for lower power consumption and higher speed. The leakage current of the transistors is the minimum level in the industry. Three types of core transistors with a different threshold voltage can be mixed according to user application.

The design rules match industry standards, and a wide range of IP macros are available for use.

As well as providing a maximum of 100 million gates, approximately twice the level of integration achieved in previous products, the power consumption per gate is also reduced by about half to 2.7 nW. Also, using the high-speed library increases the speed by a factor of approximately 1.3, with a gate delay time of 12 ps.

■ FEATURES

- Technology : 90 nm Si gate CMOS
  7- to 10-metal layers.
  Low-K (low permittivity) material is used for all dielectric inter-layers.
  Three different types of core transistors (low leak, standard, and high speed) can be used on the same chip.
  The design rules comply with industry standard processes.
- Power supply voltage : +1.2 V ± 0.1 V (standard)
- Operation junction temperature : – 40 °C to + 125 °C (standard)
- Gate delay time : tpd = 12 ps (1.2 V, Inverter, F/O = 1)
- Gate power consumption : Pd = 2.7 nW/MHz/BC (1.2 V, 2 NAND, F/O = 1)
- High level of integration : Up to 91 million gates
- Reduced chip sized realized by I/O with pad.
- Support for a wide range of cell sets (from low power versions to ultra high speed versions).
- Compliance with industry standard design rules enables non-Fujitsu commercial macros to be easily incorporated.
- Compiled cell (RAM, ROM, others)
- Support for ultra high speed (up to 10 Gbps) interface macros.
- Special interfaces (LVDS, SSTL2, etc.)
- Supports use of industry standard libraries (.LIB).
- Uses industry standard tools and supports the optimum tools for the application.

(Continued)

FUJITSU

(Continued)

- Short-term development using a physical prototyping tool
- One pass design using a physical synthesis tool
- Hierarchical design environment for supporting large-scale circuits
- Support for Signal Integrity, EMI noise reduction
- Support for static timing sign-off
- Optimum package range : FBGA, FC-BGA, PBGA,TEBGA

■ MACRO LIBRARIES (including those in preparation)

1. Logic cells (about 400 types)

Library sets having three different types of core transistors with a different threshold value are provided.

- Adder
- AND
- AND-OR
- AND-OR Inverter
- Buffer
- Clock Buffer
- Decoder
- Delay Buffer
- ENOR
- EOR
- Inverter
- Latch
- NAND
- NOR
- OR
- OR-AND
- OR-AND Inverter
- SCAN Flip flop
- Non-SCAN Flip Flop
- Selector
- Others

2. IP macros

Compliance with the design rules recommended by the industry standard STARC (Semiconductor Technology Academic Research Center) recommendations which means a wide range of commercially available IP macros can be used.

Fujitsu plans to offer the following macros.

CPU/DSP	ARM9 DSPs for communications, AV, and similar applications, others
Multi-media processing macro	JPEG, MPEG, others
Mixed signal macro	ADC, DAC, OPAMP, others
Compiled macro	RAM (1-port, 2-port), ROM, product sum calculator, others
PLL	Analog PLL

3. Special I/O interface macro

Interface macro	LVDS, SSTL2, HSTL, GTL, others
Fast I/F macro	6 Gbps I/F, 10 Gbps I/F, others

■ COMPILED CELL

Compiled cells are macro cells which are automatically generated with the bit/word configuration specified. The CS101 series has the following types of compiled cells. (Note that each macro is different in word/bit range depending on the column type.)

1. Clock synchronous single-port RAM (1 address : 1 read/write)

Column type	Memory capacity (bit)	Word range (word)	Bit range (bit)
4	16 to 144 K	16 to 1 K	1 to 144
8	32 to 576 K	32 to 8 K	1 to 72
16	64 to 576 K	64 to 16 K	1 to 36

2. Clock synchronous dual port RAM (2 address : 2 read/write)

Column type (bit)	Memory capacity (bit)	Word range (word)	Bit range (bit)
4	16 to 144 K	8 to 1 K	2 to 144
16	64 to 144 K	32 to 4 K	2 to 36

3. Clock synchronous ROM

Column type	Memory capacity (bit)	Word range (word)	Bit range (bit)
16	256 to 4 M	128 to 16 K	2 to 256
64	1 K to 4 M	512 to 64 K	2 to 64

4. Clock synchronous register file (2 address : 1 read, 1 write)

Column type	Memory capacity (bit)	Word range (word)	Bit range (bit)
1	8 to 18 K	4 to 128	2 to 144

5. Clock synchronous register file (4 address : 2 read, 2 write)

Column type	Memory capacity (bit)	Word range (word)	Bit range (bit)
1	8 to 18 K	4 to 128	2 to 144

■ LARGE CAPACITY MEMORY

Clock synchronous single-port RAM (1 address : 1 read/write)

Column type	Memory capacity (bit)	Word range (word)	Bit range (bit)
16	64 K to 9 M	8 K to 64 K	8 to 144

■ ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Application	Rating		Unit
			Min	Max	
Power supply voltage	VDD	VDDI (Internal)	− 0.5	+ 1.8	V
		VDDE (External 2.5 V)	− 0.5	+ 3.6	V
		VDDE (External 3.3 V)	− 0.5	+ 4.6	V
Input voltage *1	VI	1.2 V	− 0.5	VDDI + 0.5 (≤ 1.8)	V
		2.5 V	− 0.5	VDDE + 0.5 (≤ 3.6)	V
		3.3 V	− 0.5	VDDE + 0.5 (≤ 4.6)	V
Output voltage	VO	1.2 V	− 0.5	VDDI + 0.5 (≤ 1.8)	V
		2.5 V	− 0.5	VDDE + 0.5 (≤ 3.6)	V
		3.3 V	− 0.5	VDDE + 0.5 (≤ 4.6)	V
Storage temperature	Tstg	Plastic package	− 55	+ 125	°C
Operation junction temperature	Tj	—	− 40	+ 125	°C
Power supply pin current *2	ID	per VDD, VDDI, VDDE VSS pin	—	*4	mA
Output current *3	IO	—	—	*4	mA

*1 : The values vary depending on the type of macros.

*2 : Maximum power supply current that can steadily flow.

*3 : Maximum output current that can steadily flow.

*4 : Contact your Fujitsu representative for details.

Note : VSS = 0 V

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

■ RECOMMENDED OPERATING CONDITIONS

• **Single power supply (VDD = 1.2 V ± 0.1 V)**

(VSS = 0 V)

Parameter	Symbol	Value			Unit
		Min	Typ	Max	
Power supply voltage	VDD	1.1	1.2	1.3	V
H level input voltage	VIH	VDD × 0.7	—	VDD + 0.3	V
L level input voltage	VIL	− 0.3	—	VDD × 0.3	V
Operation junction temperature	Tj	− 40	—	+ 125	°C

• **Dual power supply (VDDE = 2.5 V ± 0.2 V, VDDI = 1.2 V ± 0.1 V)**

(VSS = 0 V)

Parameter		Symbol	Value			Unit
			Min	Typ	Max	
Power supply voltage	2.5 V	VDDE	2.3	2.5	2.7	V
	1.2 V	VDDI	1.1	1.2	1.3	V
H level input voltage	2.5 V CMOS level	VIH	1.7	—	VDDE + 0.3	V
	1.2 V CMOS level		VDDI × 0.7	—	VDDI + 0.3	V
L level input voltage	2.5 V CMOS level	VIL	− 0.3	—	+ 0.7	V
	1.2 V CMOS level		− 0.3	—	VDDI × 0.3	V
Operation junction temperature		Tj	− 40	—	+ 125	°C

• **Dual power supply (VDDE = 3.3 V ± 0.3 V, VDDI = 1.2 V ± 0.1 V)**

(VSS = 0 V)

Parameter		Symbol	Value			Unit
			Min	Typ	Max	
Power supply voltage	3.3 V	VDDE	3.0	3.3	3.6	V
	1.2 V	VDDI	1.1	1.2	1.3	V
H level input voltage	3.3 V CMOS level	VIH	2.0	—	VDDE + 0.3	V
	1.2 V CMOS level		VDDI × 0.7	—	VDDI + 0.3	V
L level input voltage	3.3 V CMOS level	VIL	− 0.3	—	+ 0.8	V
	1.2 V CMOS level		− 0.3	—	VDDI × 0.3	V
Operation junction temperature		Tj	− 40	—	+ 125	°C

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

■ ELECTRICAL CHARACTERISTICS

• **Single power supply : VDD = 1.2 V**

(VDD = 1.2 V ± 0.1 V, VSS = 0 V, Tj = – 40 °C to +125 °C)

Parameter	Symbol	Conditions	Value			Unit
			Min	Typ	Max	
H level output voltage	VOH	IOH = – 100 µA	VDD – 0.1	—	VDD	V
L level output voltage	VOL	IOL = 100 µA	0	—	0.1	V
Input leakage current	IL	—	—	—	—	µA
Pull-up/Pull-down resistor	RP	VIL = 0 at pull-up VIH = VDD at pull-down	—	12 (Target value)	—	kΩ

• **Dual power supply : VDDE = 2.5 V, VDDI = 1.2 V**

(VDDE = 2.5 V ± 0.2 V, VDDI = 1.2 V ± 0.1 V, VSS = 0 V, Tj = – 40 °C to + 125 °C)

Parameter	Symbol	Conditions	Value			Unit
			Min	Typ	Max	
H level output voltage	VOH3	2.5 V output, IOH = – 100 µA	VDDE – 0.2	—	VDDE	V
	VOH2	1.2 V output, IOH = – 100 µA	VDDI – 0.1	—	VDDI	V
L level output voltage	VOL3	2.5 V output, IOL = 100 µA	0	—	0.2	V
	VOL2	1.2 V output, IOL = 100 µA	0	—	0.1	V
Input leakage current	IL	—	—	—	—	µA
pull-up/Pull-down resistor	RP	2.5 V, VIL = 0 at pull-up/ VIH = VDDE at pull-down	—	25	—	kΩ
		1.2 V, VIL = 0 at pull-up/ VIH = VDDI at pull-down	—	12	—	kΩ

• **Dual power supply : VDDE = 3.3 V, VDDI = 1.2 V**

(VDDE = 3.3 V ± 0.3 V, VDDI = 1.2 V ± 0.1 V, VSS = 0 V, Tj = – 40 °C to + 125 °C)

Parameter	Symbol	Conditions	Value			Unit
			Min	Typ	Max	
H level output voltage	VOH3	3.3 V, IOH = – 100 µA	VDDE – 0.2	—	VDDE	V
	VOH2	1.2 V, IOH = – 100 µA	VDDI – 0.1	—	VDDI	V
L level output voltage	VOL3	3.3 V, IOL = 100 µA	0	—	0.2	V
	VOL2	1.2 V, IOL = 100 µA	0	—	0.1	V
Input leakage current*	IL	—	—	—	± 4	µA
pull-up/Pull-down resistor	RP	3.3 V, VIL = 0 at pull-up/ VIH = VDDE at pull-down	15	33	70	kΩ
		1.2 V, VIL = 0 at pull-up/ VIH = VDDE at pull-down	—	12	—	kΩ

* : The input leakage current may exceed the above value when an input buffer with pull-up or pull-down resistor is used.

■ AC Characteristics (with low power consumption, high density CS101SL library used)

Parameter	Symbol	Value			Unit
		Min	Typ	Max	
Delay time	tpd *1	typ *2 × tmin *3	typ *2 × ttyp *3	typ *2 × tmax *3	ns

*1 : Delay time = propagation delay time, enable time, disable time

*2 : “typ” is calculated based on the cell specifications.

*3 : Measurement condition

Measurement condition	tmin	ttyp	tmax
VDD = 1.2 V ± 0.1 V, VSS = 0 V, Tj = – 40 °C to +125 °C	0.62	1.00	1.57

■ I/O Pin Capacitance

Parameter	Symbol	Value	Unit
Input pin	CIN	Max16	pF
Output pin	COUT	Max16	pF
I/O pin	CI/O	Max16	pF

Note : The capacitance values vary depending on the package and pin positions.

■ DESIGN METHODS

Fujitsu’s Reference Design Flow provides the following functions that help shorten the development time of large scale and high quality LSIs.

- High reliability design estimation in the early stage of physical design realized by physical prototyping.
- Layout synthesis with optimized timing realized by physical synthesis tools.
- High accuracy design environment considering drop in power supply voltage, signal noise, delay penalty, and crosstalk.
- I/O design environment (power line design, assignment and selection of I/Os, package selection) considering noise.

■ PACKAGES

Packages available for existing series can be used for CS101 series. This allows smooth replacement with previously developed products.

Please contact your Fujitsu agent for details of delivery times.

FBGA package : Max 424 pins

FC-BGA package : Max 2116 pins

PBGA package : Max 420 pins

TEBGA package : Max 900 pins

(Packages under planning are included.)

FUJITSU LIMITED

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.
The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.
Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.
The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).
Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.
Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.
If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
