TFT MODULE

## **DEM 800480J TMH-PW-N (C-TOUCH)**

7,0“ TFT +  
Projective Capacitive TP

Product Specification

Ver.: 2.1.2

27.11.2013

**REVISION RECORD**

| REV NO. | REV DATE   | CONTENTS                     | REMARKS |

## ■ GENERAL INFORMATION

| Item of General Information | Contents                                               | Unit |
|-----------------------------|--------------------------------------------------------|------|
| LCD Size                    | 7.0 Inch (Digital) + Projective Capacitive Touch-Panel | -    |
| LCD Type                    | TFT TRANSMISSIVE Normal White                          | -    |
| View Direction              | 12 o'clock                                             | -    |
| Resolution                  | 800 x RGB x 480                                        | Dots |
| Module Size (W × H×T)       | 164.90 x 100.00 x 5.00                                 | mm   |
| Active Area (W×H)           | 154.08 x 85.92                                         | mm   |
| Pixel Pitch (W × H)         | 0.1926 x 0.179                                         | mm   |
| Interface Type              | RGB Interface                                          | -    |
| Input Voltage               | 3.3 Volt (typ.)                                        | V    |
| Module Power Consumption    | TBD                                                    | mW   |
| Backlight Type              | 24 x LEDs                                              | -    |
| Touch-Panel Driver IC       | GT-911 (Goodix, Integrated Driver IC)                  | -    |
| Touch-Panel Interface       | I2C                                                    | -    |
| Touch-Panel Type            | Glass Lens, Glass Sensor, Multitouch                   | -    |

## ■ ABSOLUTE MAXIMUM RATINGS

| Parameter                | Symbol           | Min  | Max                   | Unit |
|--------------------------|------------------|------|-----------------------|------|
| Power Supply Voltage     | DV <sub>DD</sub> | -0.3 | 3.6                   | V    |
| Logic Signal Input Level | V <sub>i</sub>   | -0.3 | DV <sub>DD</sub> +0.3 | V    |
| Operating Temperature    | T <sub>op</sub>  | -20  | 70                    | °C   |
| Storage Temperature      | T <sub>ST</sub>  | -30  | 80                    | °C   |
| Humidity                 | RH               | -    | 90% (Max 60 °C)       | RH   |

## ■ ELECTRICAL CHARACTERISTICS

## DC CHARACTERISTICS

| Parameter               | Symbol            | Min                 | Typ | Max                | Unit |
|-------------------------|-------------------|---------------------|-----|--------------------|------|
| Supply Voltage          | V <sub>DD</sub>   | 3.0                 | 3.3 | 3.6                | V    |
|                         | V <sub>COM</sub>  | -                   | 3.0 | -                  | V    |
|                         | V <sub>GH</sub>   | -                   | 18  | -                  | V    |
|                         | V <sub>GL</sub>   | -                   | -8  | -                  | V    |
|                         | AV <sub>DD</sub>  | -                   | 10  | -                  | V    |
| Current of Power Supply | IV <sub>DD</sub>  | -                   | 10  | -                  | mA   |
|                         | IAV <sub>DD</sub> | -                   | 18  | -                  | mA   |
|                         | IV <sub>GH</sub>  | -                   | 100 | -                  | uA   |
|                         | IV <sub>GL</sub>  | -                   | 100 | -                  | uA   |
| Input Voltage 'H' Level | V <sub>IH</sub>   | 0.7DV <sub>DD</sub> | -   | V <sub>DD</sub>    | V    |
| Input Voltage 'L' Level | V <sub>IL</sub>   | 0                   | -   | 0.3V <sub>DD</sub> | V    |

Note: Be sure to apply DV<sub>DD</sub> and V<sub>GL</sub> to the LCD first, then apply V<sub>GH</sub>.

**■ BACKLIGHT CHARACTERISTICS**

| Item of Backlight Characteristics | Symbol | Min.   | Typ. | Max. | Unit | Condition |
|-----------------------------------|--------|--------|------|------|------|-----------|
| Forward Voltage                   | Vf     | -      | 9.6  | 9.9  | V    | Note 1    |
| Current for LED Backlight         | IL     | -      | 160  | 176  | mA   | Note 1    |
| LED Lifetime                      |        | 50,000 | -    | -    | Hour | Note 2    |

Note 1: The LED Supply Voltage is defined by the number of LED at Ta=25°C and IL =20mA for each LED.

Note 2: The “LED life time” is defined as the module brightness decrease to 50% original brightness at Ta=25°C and IL =160mA. The LED lifetime could be decreased if operating IL is larger than 160 mA.

EXTERNAL DIMENSIONS

## ■ ELECTRO-OPTICAL CHARACTERISTICS

| Item of Electro-Optical characteristics | Symbol  | Condition               | Min   | Typ   | Max   | Unit              | Remark | Note |
|-----------------------------------------|---------|-------------------------|-------|-------|-------|-------------------|--------|------|
| Response Time                           | Tr+ Tf  |                         | —     | 25    | 50    | ms                | FIG 1. | 4    |
| Contrast Ratio                          | Cr      |                         | 400   | 500   | —     | ---               | FIG 2. | 1    |
| Luminance Uniformity                    | δ WHITE |                         | 60    | 75    | —     | %                 | FIG 2. | 3    |
| Surface Luminance                       | Lv      |                         | 320   | 350   | —     | cd/m <sup>2</sup> | FIG 2. | 2    |
| Viewing Angle Range                     | θ       | ∅ = 90°                 | 60    | 70    | —     | deg               | FIG 3. | 6    |
|                                         |         | ∅ = 270°                | 55    | 65    | —     | deg               | FIG 3. |      |
|                                         |         | ∅ = 0°                  | 60    | 70    | —     | deg               | FIG 3. |      |
|                                         |         | ∅ = 180°                | 60    | 70    | —     | deg               | FIG 3. |      |
| CIE (x, y) Chromaticity                 | Red x   | θ=0°<br>∅=0°<br>Ta=25°C | 0.586 | 0.601 | 0.616 | -                 | FIG 2. | 5    |
|                                         | Red y   |                         | 0.309 | 0.324 | 0.339 | -                 |        |      |
|                                         | Green x |                         | 0.291 | 0.301 | 0.311 | -                 |        |      |
|                                         | Green y |                         | 0.552 | 0.567 | 0.582 | -                 |        |      |
|                                         | Blue x  |                         | 0.133 | 0.143 | 0.153 | -                 |        |      |
|                                         | Blue y  |                         | 0.159 | 0.174 | 0.189 | -                 |        |      |
|                                         | White x |                         | 0.294 | 0.304 | 0.314 | -                 |        |      |
|                                         | White y |                         | 0.329 | 0.339 | 0.349 | -                 |        |      |

Note1. Contrast Ratio(CR) is defined mathematically by the following formula. For more information see FIG 2.:

$$\text{Contrast Ratio} = \frac{\text{Average Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}{\text{Average Surface Luminance with all black pixels (P1, P2, P3, P4, P5)}}$$

Note2. Surface luminance is the LCD surface from the surface with all pixels displaying white. For more information see FIG 2.

$$Lv = \text{Average Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}$$

Note3. The uniformity in surface luminance (δ WHITE) is determined by measuring luminance at each test position 1 through 5, and then dividing the maximum luminance of 5 points luminance by minimum luminance of 5 points luminance. For more information see FIG 2.

$$\delta \text{ WHITE} = \frac{\text{Minimum Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}{\text{Maximum Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}$$

Note4. Response time is the time required for the display to transition from White to black(Rise Time, Tr) and from black to white(Decay Time, Tf). For additional information see FIG 1..

Note5. CIE (x, y) chromaticity, The x,y value is determined by screen active area position NO.5 For more information see FIG 2.

Note6. Viewing angle is the angle at which the contrast ratio is greater than 2. For TFT module the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 3.

Note7. For Viewing angle and response time testing, the testing data is base on Autronic-Melchers's ConoScope. Series Instruments. For contrast ratio, Surface Luminance, Luminance uniformity and CIE, the testing data is base on TOPCON's BM-5 photo detector or compatible.

Note8. For TFT module, Gray scale reverse occurs in the direction of panel viewing angle

FIG.1. The definition of Response Time

FIG.2. Measuring method for Contrast ratio, surface luminance, Luminance uniformity, CIE (x, y) chromaticity

A : 5 mm

B : 5 mm

H, V : Active Area

Light spot size  $\varnothing=5\text{mm}$ , 500mm distance from the LCD surface to detector lens  
 measurement instrument is TOPCON's luminance meter BM-5

FIG.3. The definition of viewing angle

## ■ INTERFACE DESCRIPTION

### LCM Interface Description

| Interface NO. | NAME  | I/O or connect to | DESCRIPTION                                                                                                                  |
|---------------|-------|-------------------|------------------------------------------------------------------------------------------------------------------------------|
| 1-2           | VLED+ | P                 | Power for LED backlight(Anode)                                                                                               |
| 3-4           | VLED- | P                 | Power for LED backlight(Cathode)                                                                                             |
| 5             | GND   | P                 | Power Ground                                                                                                                 |
| 6             | VCOM  | I                 | For external VCOM DC input                                                                                                   |
| 7             | DVDD  | P                 | Digital Power,                                                                                                               |
| 8             | MODE  | I                 | DE/SYNC mode select .normally pull high<br>MODE="1"----DE mode<br>MODE="0"----SYNC mode                                      |

**Remark:**

- 1.The test samples should be applied to only one test item.
- 2.Sample size for each test item is 5~10pcs.
- 3.For Damp Proof Test, Pure water(Resistance $>10\text{M}\Omega$ ) should be used.
- 4.In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judged as a good part.
- 5.EL evaluation should be excepted from reliability test with humidity and temperature: Some defects such as black spot/blemish can happen by natural chemical reaction with humidity and Fluorescence EL has.
- 6.Failure Judgment Criterion: Basic Specification, Electrical Characteristic, Mechanical Characteristic, Optical Characteristic.

**■ INSPECTION CRITERION**

This specification is made to be used as the standard acceptance/rejection criteria for Normal LCM Product.

**1 Sample plan**

Sampling plan according to GB/T2828.1-2003/ISO 2859-1: 1999 and ANSI/ASQC Z1.4-1993, normal level 2 and based on:

Major defect: AQL 0.65

Minor defect: AQL 1.5

**2. Inspection condition**

- Viewing distance for cosmetic inspection is about 30cm with bare eyes, and under an environment of 20~40W light intensity, all directions for inspecting the sample should be within 45° against perpendicular line. (Normal temperature 20~25°C and normal humidity 60±15%RH).

- Driving voltage

The Vop value from which the most optimal contrast can be obtained near the specified Vop in the specification (Within ±0.5V of the typical value at 25°C.).

**3. Definition of inspection zone in LCD.**

Zone A: character/Digit area

Zone B: viewing area except Zone A (ZoneA+ZoneB=minimum Viewing area)

Zone C: Outside viewing area (invisible area after assembly in customer's product)

Fig.1 Inspection zones in an LCD.

Note: As a general rule, visual defects in Zone C are permissible, when it is no trouble for quality and assembly of customer's product.

## 4. Inspection Standard

### 4.1 Major Defect

| Item No | Items to be inspected  | Inspection Standard                                                                                                                                                   | Classification of defects |
|---------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| 4.1.1   | All functional defects | 1) No display<br>2) Display abnormally<br>3) Missing vertical, horizontal segment<br>4) Short circuit<br>5) Back-light no lighting, flickering and abnormal lighting. | Major                     |
| 4.1.2   | Missing                | Missing component                                                                                                                                                     |                           |
| 4.1.3   | Outline dimension      | Overall outline dimension beyond the drawing is not allowed.                                                                                                          |                           |

### 4.2 Cosmetic Defect

#### 4.2.1 Module Cosmetic Criteria

| No. | Item                                  | Judgement Criterion                                                                                                                     | Partition               |
|-----|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| 1   | Difference in Spec.                   | None allowed                                                                                                                            | Major                   |
| 2   | Pattern peeling                       | No substrate pattern peeling and floating                                                                                               | Major                   |
| 3   | Soldering defects                     | No soldering missing<br>No soldering bridge<br>No cold soldering                                                                        | Major<br>Major<br>Minor |
| 4   | Resist flaw on Printed Circuit Boards | visible copper foil ( $\varnothing 0.5\text{mm}$ or more) on substrate pattern                                                          | Minor                   |
| 5   | Accretion of metallic Foreign matter  | No accretion of metallic foreign matters (Not exceed $\varnothing 0.2\text{mm}$ )                                                       | Minor<br>Minor          |
| 6   | Stain                                 | No stain to spoil cosmetic badly                                                                                                        | Minor                   |
| 7   | Plate discoloring                     | No plate fading, rusting and discoloring                                                                                                | Minor                   |
| 8   | Solder amount                         | a. Soldering side of PCB<br>Solder to form a 'Filet' all around the lead.<br>Solder should not hide the lead form perfectly. (too much) | Minor                   |
|     | 1. Lead parts                         | b. Components side<br>(In case of 'Through Hole PCB')                                                                                   |                         |
|     |                                       | Solder to reach the Components side of PCB.                                                                                             |                         |

| 6 | Dot size                                         | To be 95% ~ 105% of the dot size (Typ.) in drawing.<br>Partial defects of each dot (ex. pin-hole) should be treated as 'Spot'.<br>(see <i>Screen Cosmetic Criteria (Operating) No.1</i> )                                                                                                                                                                                                                                                                                   | Minor |
| 7 | Uneven brightness<br>(only back-lit type module) | <p>Uneven brightness must be <math>B_{MAX} / B_{MIN} \leq 2</math></p> <p>- <math>B_{MAX}</math> : Max. value by measure in 5 points</p> <p>- <math>B_{MIN}</math> : Min. value by measure in 5 points</p> <p>Divide active area into 4 vertically and horizontally.</p> <p>Measure 5 points shown in the following figure.</p>  <p style="text-align: center;">○ : Measuring points</p> | Minor |

Note :

- (1) Size :  $d = (\text{long length} + \text{short length}) / 2$
- (2) The limit samples for each item have priority.
- (3) Complex defects are defined item by item, but if the numbers of defects are defined in above table, the total number should not exceed 10.
- (4) In case of 'concentration', even the spots or the lines of 'disregarded' size should not allowed. Following three situations should be treated as 'concentration'.
  - 7 or over defects in circle of  $\varnothing 5\text{mm}$ .
  - 10 or over defects in circle of  $\varnothing 10\text{mm}$ .
  - 20 or over defects in circle of  $\varnothing 20\text{mm}$ .

## ■ TOUCH-PANEL SPECIFICATION

## 1. General

| Item                | Description                                                                                                              | Remark           |
|---------------------|--------------------------------------------------------------------------------------------------------------------------|------------------|
| Product Model       | Projective Capacitive Touch Panel                                                                                        | -                |

## 2. Characteristics

## 2.1 Temperature Characteristics

| Item                  | Description    | Remark |
|-----------------------|----------------|--------|
| Operating Temperature | -20°C to +70°C | -      |
| Storage Temperature   | -30°C to +80°C | -      |

## 2.2 Optical and Mechanical Characteristics

| Item              | Description                     | Remark |
|-------------------|---------------------------------|--------|
| Transparency      | ≥80% (550nm wave length)        | -      |
| Surface Hardness  | ≥6H (Loading 500g , 45 deg °)   | -      |
| Ball-falling Test | ≤ 50cm (Steel ball weight: 64g) | -      |
| FPC bending test  | ≤10 times bending (by R≥1 mm),  | -      |

## 2.3 Electrical Characteristics

| FPC Design                                  | Item                      | Description     | Remark |
|---------------------------------------------|---------------------------|-----------------|--------|
| [ <input checked="" type="checkbox"/> ] COF | IC solution on TP Model   | GT911           | -      |
|                                             | Touch Count Max           | 5 point         | -      |
|                                             | Display Resolution*       | 800*480         | -      |
|                                             | Interface Type *          | I2C             | -      |
|                                             | I2C Slave Address*        | 0x5D            | -      |
|                                             | Interface Signal Voltage* | 3.3 V           | -      |
|                                             | Power Voltage*            | 3.3 V           | -      |
|                                             | Origin of Coordinate*     | Top left corner | -      |

Note1: The detail refer to the Specification for IC

Note2: ‘\*’ means that the item is optional according to the product requirement

## 2.4 Structure Characteristics

| Item                            | Dimension/        | Tolerance | Unit |
|---------------------------------|-------------------|-----------|------|
| View Area Size                  | 155.08 x 86.92    | ±0.2      | mm   |
| Cover Lens Size                 | 164.90 x 100.00   | ±0.1      | mm   |
| Cover Lens R Angle              | -                 |           | mm   |
| Cover lens Thickness            | 0.7               | ±0.1      | mm   |
| Sensor Size                     | 164.40 x 98.00    | ±0.1      | mm   |
| Sensor Thickness                | 0.55              | ±0.05     | mm   |
| Lens+Sensor Thickness           | 1.4               | ±0.1      | mm   |
| Tolerance for Lens/Sensor       | -----             | ±0.20     | mm   |
| FPC Thickness (with Component ) | 1.5               | Max       | mm   |
| FPC Connect Pitch               | 8 Pins, Pitch=0.5 | ±0.05     | mm   |

## 3. Reliability

| Item                         | Description                                                                                                                                                                                                                                   | Remark                                                                                                              |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| Storage High Temperature     | 80±5 □ *96Hrs; (except for dew gathering)                                                                                                                                                                                                     | No visual damage and function defect, which inspected after testing at normal temperature and humidity for 24 hours |
| Storage Low Temperature      | -30±5 □ *96Hrs; (except for dew gathering)                                                                                                                                                                                                    |                                                                                                                     |
| Storage Temperature-Humidity | 60±5 □ *90±5%RH*96Hrs; (except for dew gathering)                                                                                                                                                                                             |                                                                                                                     |
| Storage Temperature Cycling  | (-20±5℃*30min→25±5℃*10min→80±5℃*30min→25±5℃*10min)*10Cycles; (except for dew gathering)                                                                                                                                                       |                                                                                                                     |
| ESD Test                     | ±8KV (Air)                                                                                                                                                                                                                                    | Testing condition: TP is operated on terminal machine                                                               |
|                              | ±4KV (Contact)                                                                                                                                                                                                                                |                                                                                                                     |
| Vibration for Packaging      | Frequency 250/min, Swing 1inch, 45min                                                                                                                                                                                                         | No Visual damage and function defect to the product after testing                                                   |
| Drop for Packaging           | Six free-fall drops made up of every faces, three free-fall drops made up of random edges and one free-fall drop made up of random corner. Drop height as following: 1) weight<10Kg, 0.8m; 2) weight 11~20 Kg, 0.6m; 3) weight 21~30 Kg, 0.5m |                                                                                                                     |
