

54283/DM74283

4-Bit Binary Full Adder (with Fast Carry)

General Description

The '283 high speed 4-bit binary full adders with internal carry lookahead accept two 4-bit binary words (A0–A3, B0–B3) and a Carry input (C0). They generate the binary Sum outputs (S0–S3) and the Carry output (C4) from the most significant bit. They operate with either active HIGH or active LOW operands (positive or negative logic).

Connection Diagram

TL/F/9786–1

Order Number 54283DMQB, 54283FMQB or DM74283N
See NS Package Number J16A, N16E or W16A

Pin Names	Description
A0–A3	A Operand Inputs
B0–B3	B Operand Inputs
C0	Carry Input
S0–S3	Sum Outputs
C4	Carry Output

54283/DM74283 4-Bit Binary Full Adder (with Fast Carry)

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	
54	−55°C to +125°C
DM74	0°C to +70°C
Storage Temperature Range	−65°C to +150°C

Note: The “Absolute Maximum Ratings” are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the “Electrical Characteristics” table are not guaranteed at the absolute maximum ratings. The “Recommended Operating Conditions” table will define the conditions for actual device operation.

Recommended Operating Conditions

Symbol	Parameter	54283			DM74283			Units
		Min	Nom	Max	Min	Nom	Max	
V _{CC}	Supply Voltage	4.5	5	5.5	4.75	5	5.25	V
V _{IH}	High Level Input Voltage	2			2			V
V _{IL}	Low Level Input Voltage			0.8			0.8	V
I _{OH}	High Level Output Current			−0.4			−0.4	mA
I _{OL}	Low Level Output Current			16			16	mA
T _A	Free Air Operating Temperature	−55		125	0		70	°C

Electrical Characteristics

Over recommended operating free air temperature range (unless otherwise noted)

Symbol	Parameter	Conditions	Min	Typ (Note 1)	Max	Units
V _I	Input Clamp Voltage	V _{CC} = Min, I _I = −12 mA			−1.5	V
V _{OH}	High Level Output Voltage	V _{CC} = Min, I _{OH} = Max V _{IL} = Max	2.4	3.4		V
V _{OL}	Low Level Output Voltage	V _{CC} = Min, I _{OL} = Max V _{IH} = Min		0.2	0.4	V
I _I	Input Current @ Max Input Voltage	V _{CC} = Max, V _I = 5.5V			1	mA
I _{IH}	High Level Input Current	V _{CC} = Max, V _I = 2.4V			40	μA
I _{IL}	Low Level Input Current	V _{CC} = Max, V _I = 0.4V			−1.6	mA
I _{OS}	Short Circuit Output Current at S _n	V _{CC} = Max (Note 2)	54	−20	−55	mA
			DM74	−20	−55	
I _{OS}	Short Circuit Output Current at C4	V _{CC} = Max (Note 2)	54	−20	−70	mA
			DM74	−18	−70	
I _{CCH}	Supply Current with Outputs High	V _{CC} = Max	54		99	mA
			DM74		110	

Note 1: All typicals are at V_{CC} = 5V, T_A = 25°C.

Note 2: Not more than one output should be shorted at a time.

Switching Characteristics

$V_{CC} = +5.0V$, $T_A = +25^\circ C$ (See Section 1 for waveforms and load configurations)

Symbol	Parameter	$C_L = 15 \text{ pF}$, $R_L = 400\Omega$		Units
		Min	Max	
t_{PLH} t_{PHL}	Propagation Delay C_0 or S_n		21	ns
t_{PLH} t_{PHL}	Propagation Delay A_n or B_n to S_n		24	ns
t_{PLH} t_{PHL}	Propagation Delay C_0 to C_4		14	ns
t_{PLH} t_{PHL}	Propagation Delay A_n or B_n to C_4		16	ns

Functional Description

The '283 adds two 4-bit binary words (A plus B) plus the incoming carry C_0 . The binary sum appears on the Sum (S_0 – S_3) and outgoing carry (C_4) outputs. The binary weight of the various inputs and outputs is indicated by the subscript numbers, representing powers of two.

$$2^0 (A_0 + B_0 + C_0) + 2^1 (A_1 + B_1) + 2^2 (A_2 + B_2) + 2^3 (A_3 + B_3) = S_0 + 2S_1 + 4S_2 + 8S_3 + 16C_4$$

Where (+) = plus

Interchanging inputs of equal weight does not affect the operation. Thus C_0 , A_0 , B_0 can be arbitrarily assigned to pins 5, 6 and 7. Due to the symmetry of the binary add function, the '283 can be used either with all inputs and outputs active HIGH (positive logic) or with all inputs and outputs active LOW (negative logic). Note that if C_0 is not used it must be tied LOW for active HIGH logic or tied HIGH for active LOW logic.

Example:

	C_0	A_0	B_0	A_1	B_1	A_2	B_2	A_3	B_3	S_0	S_1	S_2	S_3	C_4
Logic Levels	L	L	H	L	H	H	L	L	H	H	H	L	L	H
Active HIGH	0	0	1	0	1	1	0	0	1	1	1	0	0	1
Active LOW	1	1	0	1	0	0	1	1	0	0	0	1	1	0

Active HIGH: $0 + 10 + 9 = 3 + 16$ Active LOW: $1 + 5 + 6 = 12 + 0$

FIGURE a. 3-Bit Adder

TL/F/9786-3

Due to pin limitations, the intermediate carries of the '283 are not brought out for use as inputs or outputs. However, other means can be used to effectively insert a carry into, or bring a carry out from, an intermediate stage. *Figure a* shows a way of making a 3-bit adder. Tying the operand inputs of the fourth adder (A_3 , B_3) LOW makes S_3 dependent only on, and equal to, the carry from the third adder. Using somewhat the same principle, *Figure b* shows a way of dividing the '283 into a 2-bit and a 1-bit adder. The third stage adder (A_2 , B_2 , S_2) is used merely as a means of getting a carry (C_{10}) signal into the fourth stage (via A_2 and B_2) and bringing out the carry from the second stage on S_2 . Note that as long as A_2 and B_2 are the same, whether HIGH or LOW, they do not influence S_2 . Similarly, when A_2 and B_2 are the same the carry into the third stage does not influence they carry out of the third stage. *Figure c* shows a method of implementing a 5-input encoder, where the inputs are equally weighted. The outputs S_0 , S_1 and S_2 present a binary number equal to the number of inputs I_1 – I_5 that are true. *Figure d* shows one method of implementing a 5-input majority gate. When three or more of the inputs I_1 – I_5 are true, the output M_5 is true.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
