

EMI Filter with ESD Protection

EMI1051

The EMI1051 is an R-C EMI filter array with bidirectional ESD protection that integrates a Pi-filter (C-R-C) to suppress EMI/RFI Noise. EMI1051 includes ESD protection diodes on the input and output pins, and provides a very high level of protection for sensitive electronic components against possible electrostatic discharge (ESD). The ESD diodes connected to the filter ports safely dissipate ESD strikes of ± 30 kV.

Features

- Small Form Factor
- ± 30 kV ESD Protection (IEC 61000-4-2, Contact Discharge)
- ± 30 kV ESD Protection (IEC 61000-4-2, Air Discharge)
- Greater than 30 dB of Attenuation in the 600 MHz – 1.55 GHz Range
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- Mobile Phones
- Tablets
- Laptops

MAXIMUM RATINGS ($T_J = 25^\circ\text{C}$ unless otherwise noted)

Rating	Symbol	Value	Unit
ESD Discharge: IEC 61000-4-2, Contact Discharge IEC 61000-4-2, Air Discharge	ESD	± 30 ± 30	kV kV
Operating Junction Temperature Range	T_J	-40 to +125	$^\circ\text{C}$
Storage Temperature Range	T_{stg}	-55 to +150	$^\circ\text{C}$
Lead Solder Temperature – Maximum (10 Seconds)	T_L	260	$^\circ\text{C}$

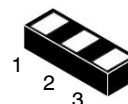

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

See Application Note AND8308/D for further description of survivability specs.

ESD VOLTAGE CLAMPING

For sensitive circuit elements it is important to limit the voltage that an IC will be exposed to during an ESD event to as low a voltage as possible. The ESD clamping voltage is the voltage drop across the ESD protection diode during an ESD event per the IEC61000-4-2 waveform. Since the IEC61000-4-2 was written as a pass/fail spec for larger systems such as cell phones or laptop computers it is not clearly defined in the spec how to specify a clamping voltage at the device level. ON Semiconductor has developed a way to examine the entire voltage waveform across the ESD protection diode over the time domain of an ESD pulse in the form of an oscilloscope screenshot, which can be found on the datasheets for all ESD protection diodes. For more information on how ON Semiconductor creates these screenshots and how to interpret them please refer to On Semiconductor Application Notes AND8307/D and AND8308/D.

Transmission Line Pulse (TLP) Measurement

Transmission Line Pulse (TLP) provides current versus voltage (I-V) curves in which each data point is obtained from a 100 ns long rectangular pulse from a charged transmission line. A simplified schematic of a typical TLP system is shown in Figure 14. TLP I-V curves of ESD protection devices accurately demonstrate the product's ESD capability because the 10s of amps current levels and under 100 ns time scale match those of an ESD event. This is illustrated in Figure 15 where an 8 kV IEC 61000-4-2 current waveform is compared with TLP current pulses at 8 A and 16 A. A TLP I-V curve shows the voltage at which the device turns on as well as how well the device clamps voltage over a range of current levels.

PACKAGE DIMENSIONS – EMI1051 (01005)

The drawing consists of three views: TOP VIEW, SIDE VIEW, and BOTTOM VIEW.

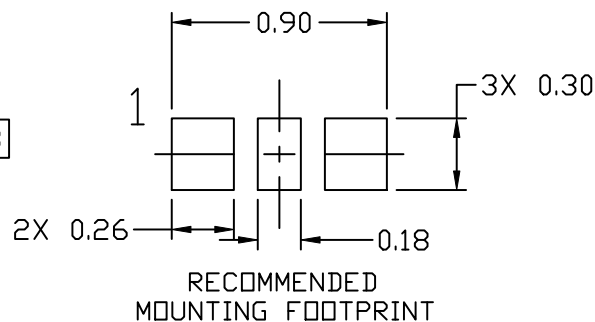

TOP VIEW: Shows a rectangular part with a width dimension D and a height dimension E . A hatched rectangular area on the left is labeled "PIN 1 INDICATOR". A feature control frame \boxed{A} is located at the top right, and another feature control frame \boxed{B} is at the middle right.

SIDE VIEW: Shows the profile of the part. It includes two feature control frames on the left: $\boxed{\text{// } 0.05 \text{ C}}$ for the top surface and $\boxed{\text{R } 0.05 \text{ C}}$ for the bottom surface. A dimension A indicates the total height, and A_1 indicates the height of the main body. A feature control frame \boxed{C} is at the bottom right, with the text "SEATING PLANE" below it.

BOTTOM VIEW: Shows the bottom of the part with three rectangular features labeled 1, 2, and 3. A dimension e is shown for the distance from the left edge to the center of feature 1. A feature control frame $\boxed{\text{3X } b \text{ } \oplus 0.05 \text{ C}}$ is on the right. A dimension $3 \times L$ is shown at the bottom right.
