ESDAVLC6V1-1BM2, ESDAVLC6V1-1BT2

Single line low capacitance Transil™ for ESD protection

Features

- Single line bi-directional protection
- Breakdown voltage V_{BR} = 6.1 V min.
- Very low capacitance (6 pF typ. @ 3 V)
- Lead-free package

Benefits

- Very low capacitance for optimized data integrity
- Very low reverse current < 0.1 µA
- Low PCB space consumption: 0.6 mm^2 max
- High reliability offered by monolithic integration

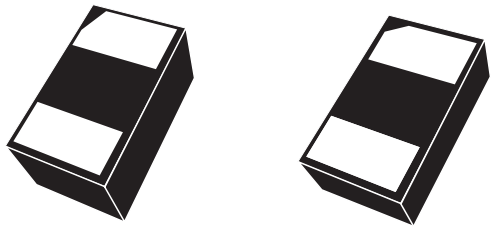
Complies with the following standards:

- IEC 61000-4-2 level 4
  - 15 kV (air discharge)
  - 8 kV (contact discharge)
- MIL STD 883G - Method 3015-7: class 3 B
  - Human body model

Applications

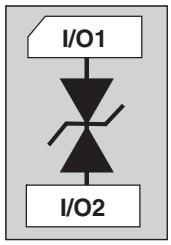
Where transient overvoltage protection in ESD sensitive equipment is required, such as:

- Computers
- Printers
- Communication systems
- Cellular phone handsets and accessories
- Video equipment



SOD882 SOD882T

Figure 1. Functional diagram



Description

The ESDAVLC6V1-1BM2 and ESDAVLC6V1-1BT2 are monolithic application specific devices dedicated to ESD protection of high speed serial interfaces such as USB 2.0, display and camera interface.

The devices are ideal for applications where both printed circuit board space and power absorption capability are required.

TM: Transil is a trademark of STMicroelectronics

1 Characteristics

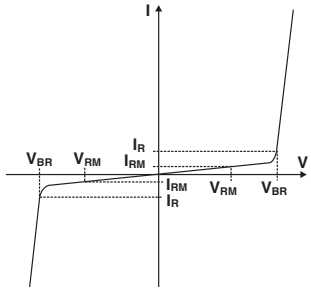
Table 1. Absolute maximum ratings (T_{amb} = 25° C)

Symbol	Parameter		Value	Unit
V_{PP}(1)	Peak pulse voltage	IEC 61000-4-2 contact discharge IEC 61000-4-2 air discharge MIL STD 883G - Method 3015-7: class 3B	15 15 25	kV
P_{PP}(1)	Peak pulse power dissipation (8/20 µs)	T_j initial = T_{amb}	30	W
I_{PP}	Peak pulse current (8/20 µs)		2.5	A
T_j	Junction temperature		125	°C
T_{stg}	Storage temperature range		- 55 to + 150	°C
T_L	Maximum lead temperature for soldering during 10 s		260	°C
T_{OP}	Operating temperature range		- 40 to + 125	°C

1. For a surge greater than the maximum values, the diode will fail in short-circuit.

Table 2. Electrical characteristics (T_{amb} = 25° C)

Symbol	Parameter
V_{RM}	Stand-of voltage
V_{BR}	Breakdown voltage
V_{CL}	Clamping voltage
I_{RM}	Leakage current @ V_{RM}
I_{PP}	Peak pulse current



Parameter	Test condition	Min	Typ	Max	Unit
V_{BR}	I_R = 1 mA	6.1			V
I_{RM}	V_{RM} = 3 V			100	nA
R_d			1.6		Ω
αT				2.5	10^{-4}/°C
C	F = 1 MHz, V_R = 0 V		7	8	pF
	F = 1 MHz, V_R = 3 V		6	7

3 Package information

- Epoxy meets UL94, V0

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at *www.st.com*.

4 Recommendation on PCB assembly

4.1 Stencil opening design

1. General recommendation on stencil opening design
   a) Stencil opening dimensions: L (Length), W (Width), T (Thickness).

Figure 26. Stencil opening dimensions

   b) General design rule

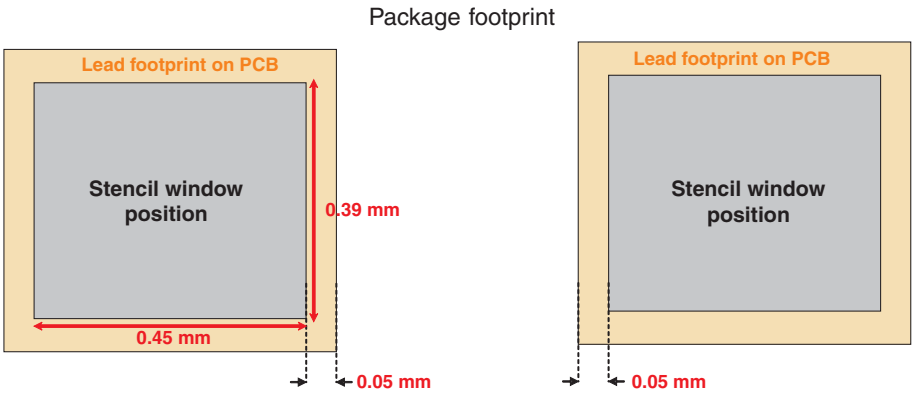
   Stencil thickness (T) = 75 ~ 125 µm

$$\text{Aspect Ratio} = \frac{W}{T} \geq 1.5$$

$$\text{Aspect Area} = \frac{L \times W}{2T(L+W)} \geq 0.66$$

2. Reference design
   a) Stencil opening thickness: 100 µm
   b) Stencil opening for leads: Opening to footprint ratio - between 60% and 65%.

Figure 27. Recommended stencil windows position



4.2 Solder paste

1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
2. “No clean” solder paste is recommended.
3. Offers a high tack force to resist component movement during high speed
4. Solder paste with fine particles: powder particle size is 20-45 µm.

4.3 Placement

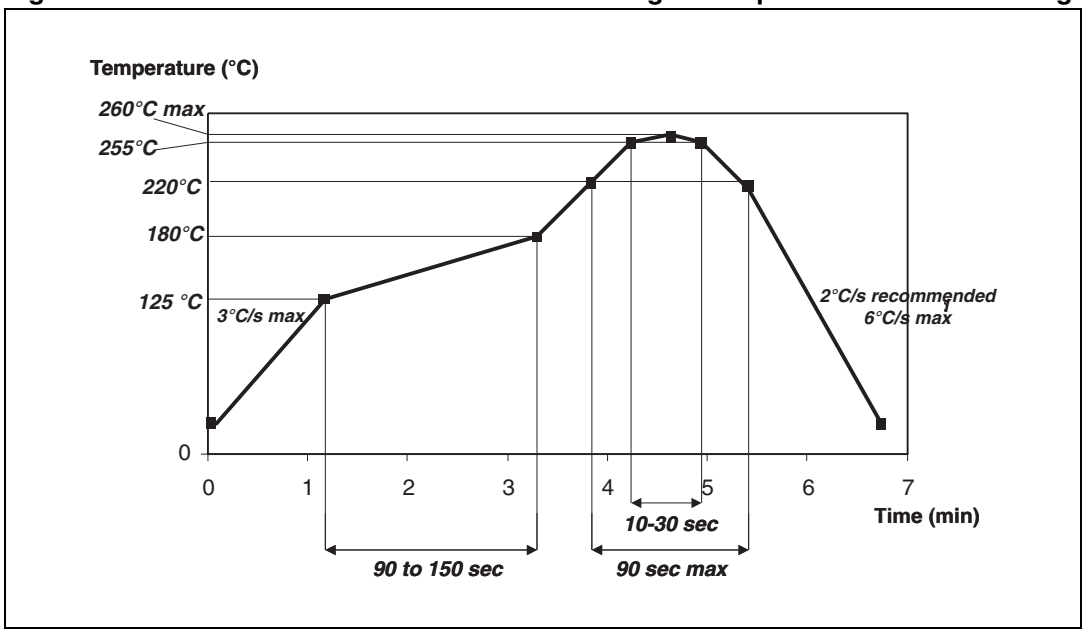
1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
3. Standard tolerance of ± 0.05 mm is recommended.
4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

4.4 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. The symmetrical layout is recommended, in case any tilt phenomena caused by asymmetrical solder paste amount due to the solder flow away.

4.5 Reflow profile

Figure 28. ST ECOPACK® recommended soldering reflow profile for PCB mounting



Note: Minimize air convection currents in the reflow oven to avoid component movement.

5 Ordering information

Table 5. Ordering information

Order code	Marking	Package	Weight	Base qty	Delivery mode
ESDAVLC6V1-1BM2	C(1)	SOD882	0.92 mg	3000	Tape and reel
ESDAVLC6V1-1BT2	T(1)	SOD882 Thin	0.76 mg	3000	Tape and reel

1. The marking can be rotated by 90° to diferentiate assembly location
