

## Dual-Channel USB High-Side Power Switch

### Description

The FP6862 is dual high-side MOSFET switches with independent enable and error flag functions, optimized for general-purpose power distribution and Universal Serial Bus (USB) requiring circuit protection.

The FP6862 supports the following USB requirements: each switch channel supplies up to 1A as required by USB downstream devices; the low on-resistance switch meets the USB voltage drop requirements.

Both switches employ soft-start circuit that minimizes inrush current in applications where highly capacitive loads are employed.

A fault status output flag is asserted during over-current, thermal shutdown or UVLO conditions. Under voltage lockout (UVLO) to ensure that the device remains off unless there is a valid input voltage present and 3.3V or 5V logic compatible enable single inputs.

### Pin Assignments

SO Package (SOP-8)

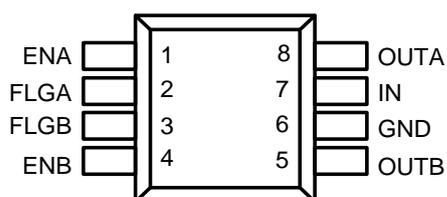

Figure 1. Pin Assignment of FP6862

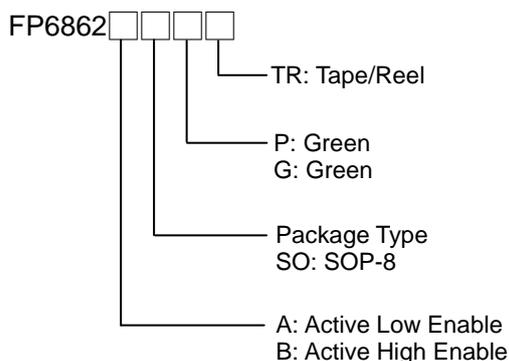

### Features

- 100mΩ (5V Input) On-Resistance Per Channel
- 2.7V to 5.5V Operating Range
- 1A Minimum Continuous Current Per Channel
- Short Circuit Protection with Thermal Shutdown
- Thermally Isolated Channels
- Under Voltage Lockout (UVLO)
- Reverse Current Flow Blocking
- Soft-Start Circuit
- Enable Active Low or Active High
- RoHS Compliant

### Applications

- USB Peripheral
- General Purpose Power Switching
- ACPI Power Distribution
- Notebook PC
- PDA
- PC Card Hot Swap

### Ordering Information

## Typical Application Circuit

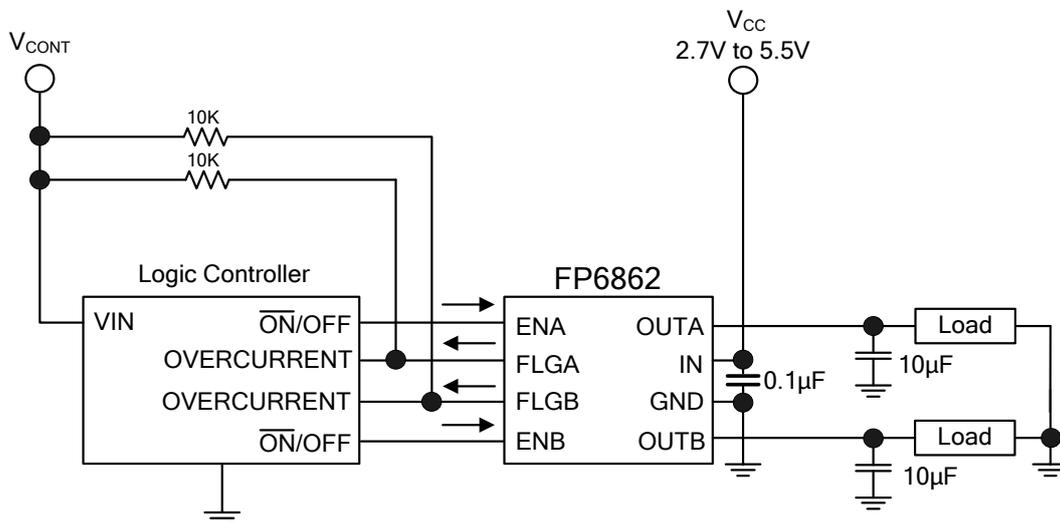

Figure 2. Typical Application Circuit of FP6862

## Functional Pin Description

Pin Name	Pin No.	Pin Function
<b>ENA</b>	1	Switch A Enable (Input): Logic-compatible, enable input. Active high or active low.
<b>FLGA</b>	2	Fault Flag A (Output): Active-low, open-drain output. Indicates UVLO, over current or thermal shutdown.
<b>FLGB</b>	3	Fault Flag B (Output): Active-low, open-drain output. Indicates UVLO, over current or thermal shutdown.
<b>ENB</b>	4	Switch B Enable (Input): Logic-compatible, enable input. Active high or active low.
<b>OUTB</b>	5	Switch B (Output).
<b>GND</b>	6	Ground.
<b>IN</b>	7	Switch and IC Power Input.
<b>OUTA</b>	8	Switch A (Output).

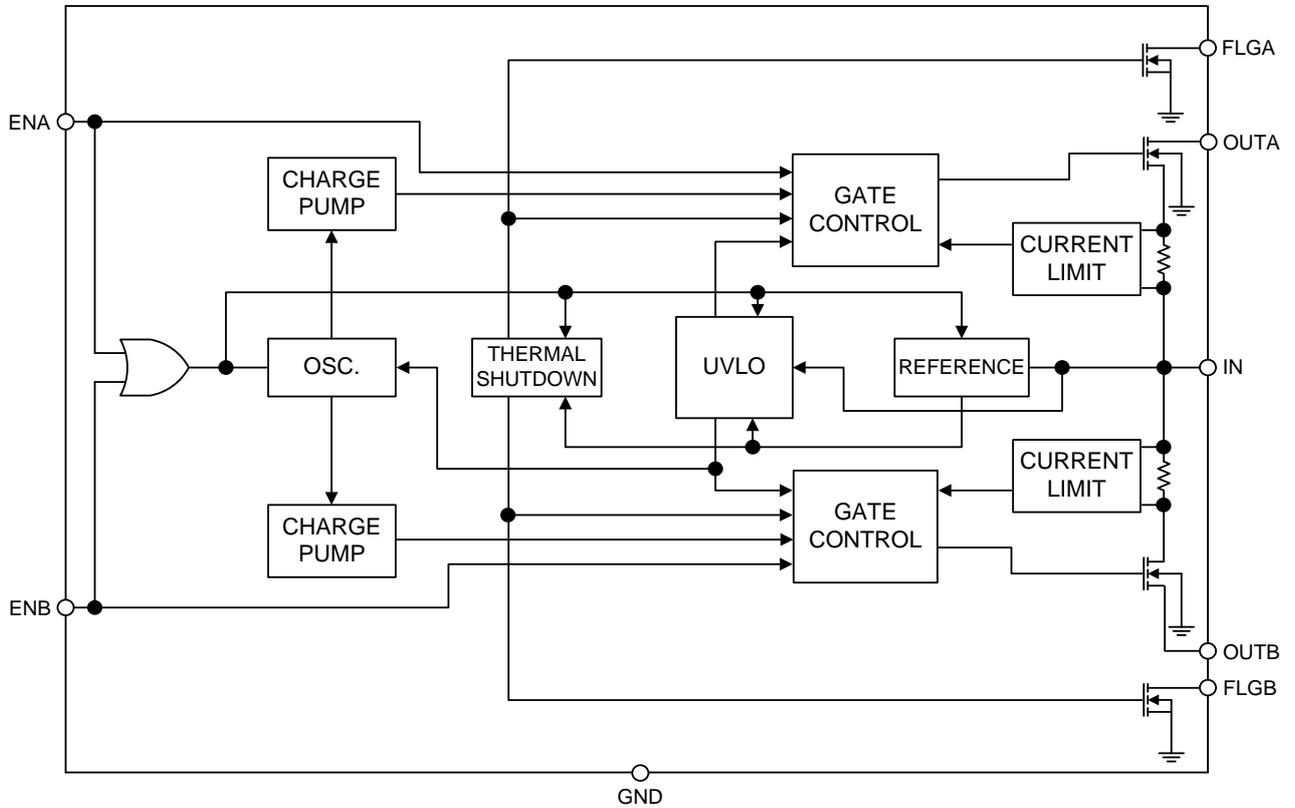

Figure 3. Block Diagram of FP6862

## Absolute Maximum Ratings

- Supply Voltage (IN) ----- -0.3V to +6V
- Fault Flag Voltage (FLG) ----- +6V
- Fault Flag Current ( $I_{FLG}$ ) ----- 25mA
- Output Voltage (OUT) ----- +6V
- Output Current ( $I_{OUT}$ ) ----- Internal Limited
- Enable Input (EN) ----- -0.3V to +6V
- Power dissipation @ $T_A=25^{\circ}C$ , ( $P_D$ )
  - SOP-8 ----- 0.63W
- Package Thermal Resistance, ( $\theta_{JA}$ )
  - SOP-8 ----- 160 $^{\circ}C/W$
- Maximum Junction Temperature ( $T_J$ ) ----- +150 $^{\circ}C$
- Storage Temperature Range ( $T_{STG}$ ) ----- -65 $^{\circ}C$  to +130 $^{\circ}C$
- Lead Temperature (Soldering, 10 sec.) ----- 260 $^{\circ}C$

Note1 : Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.

## Recommended Operating Conditions

- Supply Voltage ( $V_{IN}$ ) ----- +2.7V to +5.5V
- Operation Temperature Range ----- -40 $^{\circ}C$  to +85 $^{\circ}C$

## Electrical Characteristics

 $V_{IN}=+5V, T_A=25^{\circ}C$ , unless otherwise specified

Parameter	Symbol	Conditions	Min	Typ	Max	Unit
Supply Current	$I_{DD}$	FP6862A, $V_{ENA}=V_{ENB}<0.3V$		110	160	$\mu A$
		FP6862B, $V_{ENA}=V_{ENB}>1.1V$				
Shutdown Current	$I_{SD}$	FP6862A, $V_{ENA}=V_{ENB}>1.1V$		0.75	5	$\mu A$
		FP6862B, $V_{ENA}=V_{ENB}<0.3V$				
Enable Input Threshold	$V_{EN}$	$V_{EN}=\text{Logic "0"}$			0.3	V
		$V_{EN}=\text{Logic "1"}$	1.1			
Enable Input Current	$I_{EN}$	$V_{EN}=0$ to 5.5V	-1	0.01	1	$\mu A$
Enable Input Capacitance (Note3)	$C_{EN}$			1		pF
Switch Resistance (Note3)	$R_{DS-ON}$	$R_L=10\Omega$		100	150	m $\Omega$
Output Leakage Current	$I_{LEAK}$				10	$\mu A$
Output Turn-on Delay Time (Note3)	$T_{ON}$	$R_L=10\Omega, C_L=1\mu F$ (Fig.6)		100		$\mu s$
Output Turn-on Rise Time (Note3)	$T_R$	$R_L=10\Omega, C_L=1\mu F$ (Fig.6)		1.0	2.5	ms
Output Turn-off Delay Time (Note3)	$T_{OFF}$	$R_L=10\Omega, C_L=1\mu F$ (Fig.6)		0.8	20	$\mu s$
Output Turn-off Fall Time (Note3)	$T_F$	$R_L=10\Omega, C_L=1\mu F$ (Fig.6)		0.8	20	$\mu s$
Continuous Load Current	$I_{OUT}$	Each channel	1			A
Current Limit Threshold	$I_{LIMIT}$	Ramped load applied to output (Fig.7)	1.1	1.6	2.1	A
Under Voltage Lockout Threshold	$V_{UVLO}$	$V_{IN}$ Rising		2.5		V
		$V_{IN}$ Falling		2.3		
Error Flag Output Resistance (Note3)	$R_{FLAG}$	$V_{IN}=5V, I_L=10mA$		20	40	$\Omega$
		$V_{IN}=3.3V, I_L=10mA$		25	50	
Error Flag Off Current	$I_{LEAKAGE}$	$V_{FLG}=5V$		0.01	1	$\mu A$
Over-Temperature Threshold (Note 2,3)	$T_{SD}$	$T_j$ increasing, each channel		140		$^{\circ}C$
		$T_j$ decreasing, each channel		120		
		$T_j$ increasing, both channels		160		
		$T_j$ decreasing, both channels		150		

Note 2 : If there is a over-load fault on one channel causes die reaches approximately 140 $^{\circ}C$ , that channel will shutdown. If the die reaches approximately 160 $^{\circ}C$ , both channels will shutdown.

Note3 : Guarantee by design.

## Application Information

The FP6862 is a dual, current-limited switch designed for USB applications. It has two independent switches, each with its own enable control input. Each switch has an error-flag output to notify the USB controller when the current-limit, short-circuit, under voltage lockout (UVLO) or thermal shutdown occurs.

The FP6862 operates from 2.7V to 5.5V input voltage range and guarantees a minimum 1A output current. Independent current-limit and thermal shutdown circuits permit each switch to operate independently, improving system robustness.

### UVLO and Input-Voltage Requirement

Under Voltage Lockout (UVLO) circuit prevents the output switch from turning on until input voltage exceeds approximately 2.5V.

### Reverse Current Blocking

The USB specification does not allow an output device to source current back into the USB port. However, the FP6862 are designed to safely power noncompliant devices. When disable, each output is switched to a high-impedance state, blocking reverse current flow from the output back to the input. The switch is bi-directional when enable.

### Error Flag

The FP6862 provides an open drain error flag output for each switch. For most applications, connect FLG and IN through a 10k $\Omega$  pull-up resistor. FLG goes low when any following conditions occur:

1. The input voltage is below the UVLO threshold.
2. The thermal shutdown occurs.
3. The switch is in current-limit and short-circuit conditions.

### Supply Filtering

A 0.1 $\mu$ F to 1 $\mu$ F bypass capacitor positioned close to  $V_{IN}$  and GND of the FP6862 is strongly recommended to control supply transients. Without a bypass capacitor, an output short may cause sufficient ringing on the input to damage internal control circuitry.

### Error Flag

An error flag is an open-drain output of an N-channel MOS. Flag output is pulled low to signal the following fault conditions: Supply voltage under UVLO threshold voltage, current limit, short circuit or thermal shutdown.

### Current Limit

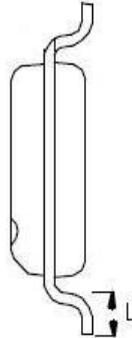

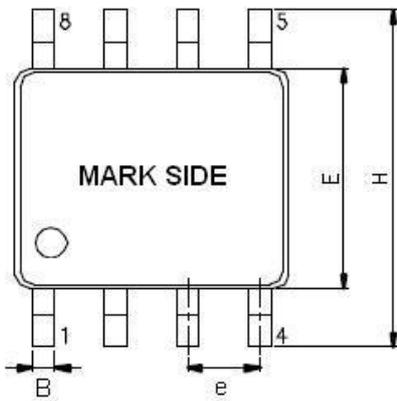

The current limit threshold is preset internally. It protects the output switch from damage due to undesirable short circuit conditions or excess inrush current often encountered during hot plug-in.

### Thermal Shutdown

Thermal shutdown is employed to protect the device from damage when the die temperature exceeds safe margins mainly due to short-circuit or current-limit. FP6862 features independent thermal shutdown for each switch channel, allowing one switch to deliver power even if the other switch has a fault condition. Thermal shutdown shuts off the output switch which in current-limit or short-circuit and asserts the FLG output if the die temperature reaches 140°C and the other channel is not affected. However, if the die temperature exceeds 160°C, both channels will be shut off.

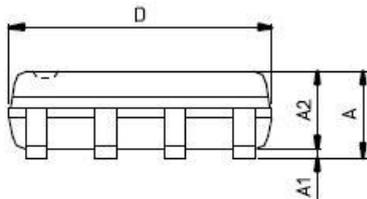

**Outline Information**

SOP-8 Package (Unit: mm)

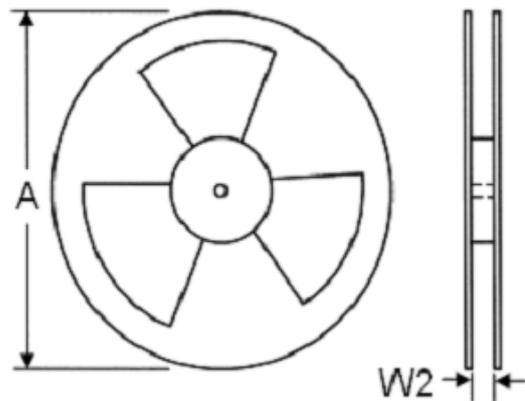

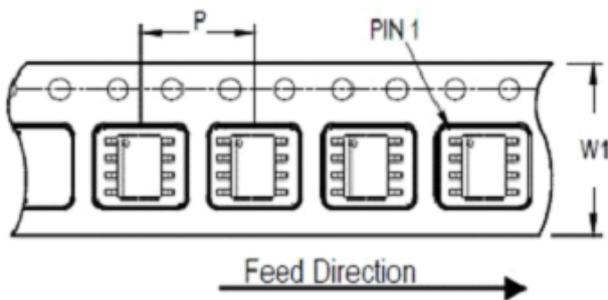

SYMBOLS UNIT	DIMENSION IN MILLIMETER	
	MIN	MAX
A	1.35	1.75
A1	0.10	0.25
