FQD8P10TM-F085

100V P-Channel MOSFET

General Description

These P-Channel enhancement mode power field effect transistors are produced using ON Semiconductor's proprietary, planar stripe, DMOS technology.

This advanced technology has been especially tailored to minimize on-state resistance, provide superior switching performance, and withstand high energy pulse in the avalanche and commutation mode. These devices are well suited for low voltage applications such as audio amplifier, high efficiency switching DC/DC converters, and DC motor control.

Features

- -6.6A, -100V, R_{DS(on)} = 0.53Ω @V_{GS} = -10 V
- Low gate charge (typical 12 nC)
- Low Crss (typical 30 pF)
- Fast switching
- 100% avalanche tested
- Improved dv/dt capability
- Qualified to AEC Q101
- RoHS Compliant

Absolute Maximum Ratings T_C = 25°C unless otherwise noted
