

FSA223 — USB2.0 High-Speed (480Mbps) and Audio Switches with Negative Signal Capability

Features

- HS-USB: 4 Ω Typical On Resistance
- HS-USB: 4.5 pF Typical On Capacitance
- Audio: 3 Ω Typical On Resistance
- -3 db Bandwidth: > 720 MHz
- Low Power Consumption
- Power-off Protection on Common D+/R, D-/L Ports
- Automatically Detects V_{CC} for Switch Path Selection

Applications

- Cell Phone, PDA, Digital Camera, and Notebook
- LCD Monitor, TV, and Set-Top Box

Related Resources

- Please refer to tape and reel specifications on www.fairchildsemi.com; <http://www.fairchildsemi.com/packaging>.

Description

The FSA223 is a Double-Pole, Double Throw (DPDT) multiplexer that combines a low-distortion audio and a USB2.0 High-Speed (HS) switch path. This configuration enables audio and USB data to share a common connector port. The architecture is designed to allow both audio and USB signals to swing below ground. This means a common USB and headphone jack can be used for personal media players and portable peripheral devices.

Since USB2.0 is an industry standard for shared data-path in portable devices, the FSA223 also incorporates a V_{CC} detection capability. The FSA223 includes a power-off feature to minimize current consumption when V_{CC} is not present. This power-off circuitry is available for the common D+/R, D-/L ports only. Typical applications involve switching in portables and consumer applications, such as cell phones, digital cameras, and notebooks with hubs or controllers.

IMPORTANT NOTE:

For additional performance information, please contact analogswitch@fairchildsemi.com.

Pin Definitions

Name	Description
V_{audio}	Power supply (audio)
V_{CC}	Power supply (USB) and auto USB switch-path select
A_{Sel}	Audio select to override auto USB detect when V_{AUDIO} supply is present
D+, D-	USB data bus input sources
R, L	Audio right and left input sources
D+/R, D-/L	USB and audio common connector ports

Truth Table

$A_{Sel}^{(1)}$	V_{audio}	V_{CC}	L, R	D+, D-
— ⁽²⁾	—	LOW	OFF	OFF
—	LOW	HIGH	OFF	ON
LOW	HIGH	HIGH	OFF	ON
HIGH	HIGH	HIGH	ON	OFF

Note:

- A_{Sel} - Internal resistor to GND provides auto- V_{CC} detect if there is no external connection. Forcing A_{Sel} HIGH when V_{AUDIO} is present overrides the USB path.
- The dash (—) indicates "Don't Care" state.

Functional Description

The FSA223 is a combined USB and audio switch that enables sharing the D+/D- lines of a USB connector with stereo audio CODEC outputs. The switch is optimized for high-speed USB signals and includes an automatic V_{CC} -detection circuit. The FSA223 detects the presence of V_{CC} and defaults to USB mode. Both the USB and audio switch paths

also handle negative signals, which eliminates the need for large coupling capacitors.

The A_{Sel} pin is internally terminated by a resistor to GND (typical value: 3 M Ω) and results in a default USB connection. For optimal performance, V_{CC} should be connected directly to the device battery.

Application Diagram

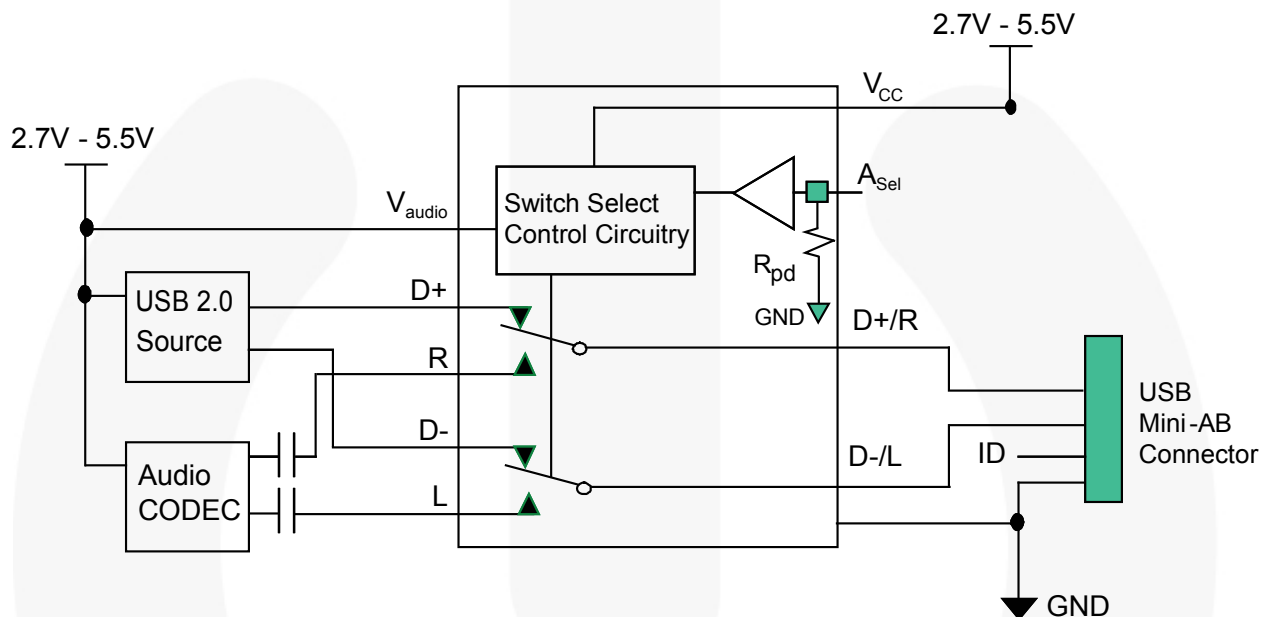

Figure 5. Typical Application

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter		Min.	Max.	Unit
V_{Audio}	Supply Voltage		-0.5	6.0	V
V_{CC}	Supply Voltage		-0.5	6.0	V
V_{SW}	Switch I/O Voltage ^(3,4)	R, L Pins	$V_{\text{audio}} - 7.0\text{V}$	$V_{\text{audio}} + 0.3\text{V}$	V
		D+, D-, D+/R, D-/L Pins	$V_{\text{CC}} - 7.0\text{V}$	$V_{\text{CC}} + 0.3\text{V}$	V
A_{Sel}	Control Input Voltage ⁽³⁾		-0.5	6.0	V
I_{IK}	Input Clamp Diode Current			-50	mA
I_{SW}	Switch I/O Current (Continuous)	USB		50	mA
		Audio		50	mA
I_{SWPEAK}	Peak Switch Current (Pulsed at 1ms Duration, <10% Duty Cycle)	USB		100	mA
		Audio		100	mA
T_{STG}	Storage Temperature Range		-65	+150	°C
T_{J}	Maximum Junction Temperature			+150	°C
T_{L}	Lead Temperature (Soldering, 10 seconds)			+260	°C
ESD	Human Body Model, JESD22-A114	I/O to GND		7.5	kV
		All Other Pins		3.0	
		V_{Audio} V_{CC} to GND		12.0	
	Charged Device Model, JESD22-C101			2.0	

Notes:

- The input and output negative ratings may be exceeded if the input and output diode current ratings are observed.
- V_{SW} maximum values can be exceeded ONLY if I_{SW} maximum values are observed. For example, $V_{\text{SW}} = V_{\text{CC}} + 0.6\text{V}$ is acceptable if I_{SW} is limited externally to $\leq 50\text{mA}$.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter		Min.	Max.	Units
V_{Audio}	Supply Voltage		2.7	5.5	V
V_{CC}	Supply Voltage		2.7	5.5	V
A_{Sel}	Control Input Voltage		0	V_{CC}	V
V_{SW}	Switch I/O Voltage		$V_{\text{Audio}} - 6.5\text{V}$	$V_{\text{Audio}} - 0.3\text{V}$	V
			$V_{\text{CC}} - 6.5\text{V}$	V_{CC}	V

I _{CCT}	Increase in I _{CC} Current per Control Voltage and V _{CC}	V _{audio} =3.6 V, 4.3 V ⁽⁵⁾	V _{ASeI} =2.6 V, V _{CC} =Floating		10	15	μA
			V _{ASeI} =1.8 V, V _{CC} =Floating		14	18	

Notes:

- 4.3 V is guaranteed by characterization, not production tested.
- On resistance is determined by the voltage drop between the A and B pins at the indicated current through the switch.
- Δ R_{ON}=R_{ON} max - R_{ON} min measured at identical V_{CC}, temperature, and voltage. Worst-case signal path, audio or USB channel, is characterized.
- Guaranteed by characterization, not production tested.
- Flatness is defined as the difference between the maximum and minimum values of on resistance over the specified range of conditions.

Applications Information

In applications where V_{sw} could exceed the absolute maximum rating of $V_{CC}+0.3V$, the following recommendations help maintain low power consumption and protect the part.

The addition of the series diode in the V_{CC} supply line blocks any current that might leak back into V_{CC} for over-voltage input cases.

Because the deselected channel may no longer provide guaranteed off isolation, consider the following:

- During USB transfer, the audio amplifier should be powered down.
- During audio transfer, the USB pull-up resistor supply must be removed (as specified on page 141 of the USB 2.0 specification).

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
