#### FST32253

# Dual 4:1 Multiplexer/Demultiplexer Bus Switch with 25 $\Omega$ Series Resistor in Outputs

#### **General Description**

The Fairchild Switch FST32253 is a dual 4:1 high-speed CMOS TTL-compatible multiplexer/demultiplexer bus switch. The low On Resistance of the switch allows inputs to be connected to outputs without adding propagation delay or generating additional ground bounce noise.

When  $\overline{\text{OE}}$  is LOW,  $S_0$  and  $S_1$  connect the A Port to the selected B Port output. When  $\overline{\text{OE}}$  is HIGH, the switch is OPEN and a high-impedance state exists between the two ports.

The FST32253 has an equivalent  $25\Omega$  series resistor to reduce signal-reflection noise, eliminating the need for external terminating resistors.

#### **Features**

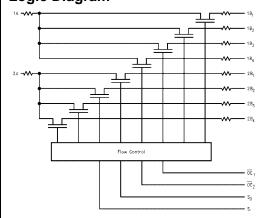

- $\blacksquare$  25 $\Omega$  switch connection between two ports
- Minimal propagation delay through the switch
- Low I<sub>CC</sub>
- Zero bounce in flow-through mode
- Control inputs compatible with TTL level

## Recommended Operating Conditions (Note 3)

 $\begin{array}{ll} \mbox{Power Supply Operating (V$_{CC}$)} & 4.0 \mbox{V to } 5.5 \mbox{V} \\ \mbox{Input Voltage (V$_{IN}$)} & 0 \mbox{V to } 5.5 \mbox{V} \\ \mbox{Output Voltage (V$_{OUT}$)} & 0 \mbox{V to } 5.5 \mbox{V} \end{array}$ 

Input Rise and Fall Time (t<sub>r</sub>, t<sub>f</sub>)

Note 1: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The Recommended Operating Conditions tables will define the conditions for actual device operation.

**Note 2:** The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed.

Note 3: Unused control inputs must be held HIGH or LOW. They may not float
