General Description

The G966L is a high performance positive voltage regulator designed for use in applications requiring very low Input voltage and very low dropout voltage at up to 2 amps. It operates with a V_{IN} as low as 1.4V and VPP voltage 5V with output voltage programmable as low as 0.8V. The G966L features ultra low dropout, ideal for applications where V_{OUT} is very close to V_{IN} . Additionally, the G966L has an enable pin to further reduce power dissipation while shutdown. The G966L provides excellent regulation over variations in line, load and temperature. The G966L provides a power OK signal to indicate if the voltage level of VO reaches 92% of its rating value.

The G966L is available in the power SOP-8 (FD) and TDFN3X3-10 package. It is available with 2.5V internally preset outputs that are also adjustable using external resistors.
