

GL358/358A DUAL OPERATIONAL AMPLIFIER

Description

The GL358 consists of two independent, high gain, internally frequency compensated operational amplifiers which were specifically designed to operate from a single power supply over a wide range of voltage and the power supply current drain is independent of the magnitude of the power supply voltage.

Application areas include transducer amplifiers, dc gain blocks and all the conventional OP AMP circuits which now can be more easily implemented in single power systems.
