Description

The HD74LVC1G66 has an analog switch in a 5-pin package. Switch section has its enable input control (CONT). High-level voltage applied to CONT turns on the switch section. Applications include signal gating chopping, modulation or demodulation (modem), and signal multiplexing for analog to digital to analog conversion systems. Low voltage and high-speed operation is suitable for the battery powered products (e.g., notebook computers), and the low power consumption extends the battery life.

Features

- The basic gate function is lined up as renesas uni logic series.
- Supply voltage range: 1.65 to 5.5 V
Operating temperature range: –40 to +85°C
- Control input: V_{IH} (Max.) = 5.5 V (@ V_{CC} = 0 V to 5.5 V)
- Ordering Information

Notes: The absolute maximum ratings are values, which must not individually be exceeded, and furthermore no two of which may be realized at the same time.

1. The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
2. This value is limited to 5.5 V maximum.

1. C_L includes probe and jig capacitance.
 2. Waveform–A is for an output with internal conditions such that the output is low except when disabled by the output control.
 3. Waveform–B is for an output with internal conditions such that the output is high except when disabled by the output control.
 4. All input pulses are supplied by generators having the following characteristics:
PRR ≤ 10MHz, Z_o = 50 Ω.
