General Description

The HMC455LP3 & HMC455LP3E are high output IP3 GaAs InGaP Heterojunction Bipolar Transistor (HBT) ½ watt MMIC amplifiers operating between 1.7 and 2.5 GHz. Utilizing a minimum number of external components the amplifier provides 13 dB of gain and +28 dBm of saturated power at 56% PAE from a single +5 Vdc supply voltage. The high output IP3 of +42 dBm coupled with the low VSWR of 1.4:1 make the HMC455LP3 & HMC455LP3E ideal driver amplifiers for PCS/3G wireless infrastructures. A low cost, leadless 3x3 mm QFN surface mount package (LP3) houses the linear amplifier. The LP3 provides an exposed base for excellent RF and thermal performance.

Electrical Specifications, $T_A = +25^\circ\text{C}$, $V_S = +5\text{V}$

[2] Circuit Board Material: Rogers 4350, Er = 3.48

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of VIA holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
