### **General Description**

The HMC524ALC3B is a compact GaAs MMIC I/Q mixer in a leadless RoHS compliant SMT ceramic package. This device can be used as either an image reject mixer or a single sideband upconverter. The mixer utilizes two standard double balanced mixer cells and a 90 degree hybrid fabricated in a GaAs MESFET process. A low frequency quadrature hybrid was used to produce a 100 MHz IF output. This product is a much smaller alternative to hybrid style image reject mixers and single sideband upconverter assemblies. The HMC524ALC3B eliminates the need for wire bonding allowing use of surface mount manufacturing techniques.

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Analog Devices upon request.
