#### 1.0 GENERAL DESCRIPTIONS

#### 1.1 Introduction

HannStar Display model HSD250MUW2-A is a color active matrix thin film transistor (TFT) liquid crystal display (LCD) that uses amorphous silicon TFT as a switching device. This model is composed of a TFT LCD panel, the voltage reference, common voltage, DC-DC converter, column, and row driver circuit. This TFT LCD has a 25-inch diagonally measured active display area with WUXGA resolution (1920 vertical by 1080 horizontal pixel array).

#### 1.2 Features

- 25" WUXGA mode TFT LCD pane for monitor application
- High speed response time and wide view angle
- 4 CCFL Backlight system
- Supported WUXGA (V:1920 lines, H:1080 pixels) Resolution
- LVDS interface
- RoHS compatible

### 2.2 Electrical Absolute Rating:

#### 2.2.1 TFT LCD Module:

| Item                 | Symbol | Min. | Max. | Unit. | Note   |
|----------------------|--------|------|------|-------|--------|
| Power supply Voltage | VDD    | -0.3 | 6.0  | V(DC) | (1)(2) |

### 2.2.2 Back Light Unit:

| Item           | Symbol         | Min. | Max. | Unit | Note      |
|----------------|----------------|------|------|------|-----------|

| Lamp frequency | f <sub>L</sub> | 40   | 80   | KHz  | (1)(2)(3) |

#### Note:

- (1) Permanent damage may occur to the LCD module if beyond this specification. Functional operation should be restricted to the conditions described under Normal Operating Conditions.
- (2) To exceed 7.5mA, life time accelerate drop down and if to exceed 9.0 mA has safety problem. If current is lower than 3.5 mA, CCFL would be unstable or damaged.
- (3) Within Ta=25±2℃

### Note (1)

Lamp current is measured with current meter for high frequency as shown below. Specified values are for a single lamp. To exceed 7.5 mA, life time accelerate drop down and if to exceed 9.0 mA has safety problem. If current lower than 3.5 mA, CCFL would be unstable or damaged.

#### Note (2)

Lamp frequency may produce interference with horizontal synchronous frequency and this may cause ripple noise on the display. Therefore lamp frequency shall be kept away from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.

#### Note (3)

Lamp life time (Hr) can be defined as the time in which it continues to operate under the condition: Ta=25±3°C, Typical IL value indicated in the above table and fL=48 kHz until the brightness becomes less than 50%

#### Note (4)

CCFL inverter should be able to provide a voltage over specified value (Vs) in the above table. Lamp units need at least Vs value shown above to ignition.

#### Note (5)

The voltage over specified value (Vs) should be applied to the lamp more than 1 second after startup. Otherwise, the lamp may not be turned on. The used lamp current is the lamp typical current.

#### Note (6)

The output voltage waveform and current waveform of the inverter must be symmetrical (Unsymmetrical ratio is less than 10%). Please do not use the inverter which has unsymmetrical voltage and current waveform, and spike waveform. The inverter design which can provide the best optical performance, power efficiency, and lamp life should under the following conditions.

- a. The asymmetry rate of the inverter waveform should be less than 10%.
- b. The distortion tae of the waveform should be within  $\sqrt{2\pm10\%}$ .

distributed or reproduced in whole or in part without written permission of HannStar Display Corporation.

c. The inverter output waveform should be better similar to the ideal sine wave.

Note: (1) The supply voltage of the external system for the module input should be the same as the definition of V<sub>DD</sub>.

- (2) Apply the lamp volatge within the LCD operation range. When the back-light turns on before the LCD operation or the LCD truns off before the back-light turns off, the display may momentarily become white.
- (3) In case of VDD = off level, please keep the level of input signal on the low or keep a high impedance.
- (4) TP4 should be measured after the module has been fully discharged between power off
- (5) Interface signal shall not be kept at high impedance when the power is on.

### 10.0 GENERAL PRECAUTION

#### 10.1 Use Restriction

This product is not authorized for use in life supporting systems, aircraft navigation control systems, military systems and any other application where performance failure could be life-threatening or otherwise catastrophic.

### 10.2 Disassembling or Modification

Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display. HannStar does not warrant the module, if customers disassemble or modify the module.

#### 10.3 Breakage of LCD Panel

- 10.3.1 If LCD panel is broken and liquid crystal spills out, do not ingest or inhale liquid crystal, and do not contact liquid crystal with skin.
- 10.3.2 If liquid crystal contacts mouth or eyes, rinse out with water immediately.
- 10.3.3 If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.
- 10.3.4 Handle carefully with chips of glass that may cause injury, when the glass is broken.

#### 10.4 Electric Shock

- 10.4.1 Disconnect power supply before handling LCD module.
- 10.4.2 Do not pull or fold the CCFL cable.
- Do not touch the parts inside LCD modules and the fluorescent lamp's connector 10.4.3 or cables in order to prevent electric shock.

#### 10.5 Absolute Maximum Ratings and Power Protection Circuit

- Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts' parameters, environmental temperature, etc., otherwise LCD module may be damaged.
- Please do not leave LCD module in the environment of high humidity and high 10.5.2 temperature for a long time.
- 10.5.3 It's recommended employing protection circuit for power supply.

### 10.6 Operation

- 10.6.1 Do not touch, push or rub the polarizer with anything harder than HB pencil lead. Use fingerstalls of soft gloves in order to keep clean display quality, when Persons handle the LCD module for incoming inspection or assembly.
- 10.6.2 When the surface is dusty, please wipe gently with absorbent cotton or other soft material.
- 10.6.3 Wipe off saliva or water drops as soon as possible. If saliva or water drops contact with polarizer for a long time, they may causes deformation or color fading.
- 10.6.4 When cleaning the adhesives, please use absorbent cotton wetted with a little petroleum benzine or other adequate solvent.

#### 10.7 Mechanism

Please mount LCD module by using mounting holes arranged in four corners tightly.

#### 10.8 Static Electricity

- 10.8.1 Protection film must remove very slowly from the surface of LCD module to prevent from electrostatic occurrence.
- 10.8.2 Because LCD module uses CMOS-IC on circuit board and TFT-LCD panel, it is very weak to electrostatic discharge. Please be careful with electrostatic discharge.
- 10.8.3 Persons who handle the module should be grounded through adequate methods.

#### 10.9 Strong Light Exposure

The module shall not be exposed under strong light such as direct sunlight. Otherwise, display characteristics may be changed.

### 10.10 Disposal

When disposing LCD module, obey the local environmental regulations.
