HIGH SPEED DUAL CHANNEL OPTICALLY COUPLED ISOLATOR PHOTOTRANSISTOR OUTPUT

APPROVALS

- UL recognised, File No. E91231

DESCRIPTION

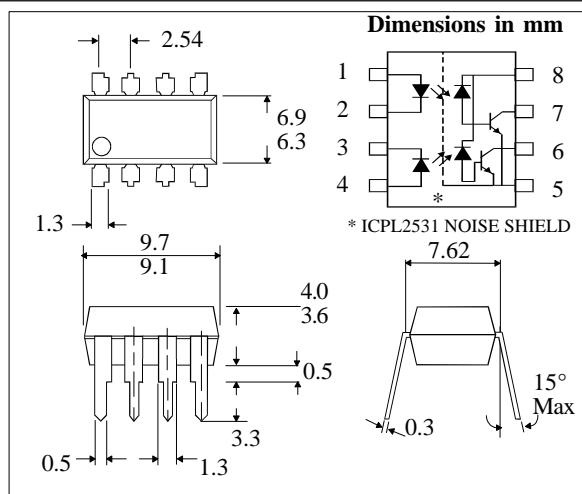

These dual channel diode-transistor optocouplers use a light emitting diode and an integrated photon detector to provide 2500Volts _{RMS} electrical isolation between input and output. Separate connection for the photodiode bias and output transistor collector improve the speed up to a hundred times that of a conventional photo-transistor coupler by reducing the base-collector capacitance.

NOTES:-

- Derate linearly above 70°C free air temperature at a rate of $0.8 \text{ mA}/^\circ\text{C}$.
- Derate linearly above 70°C free air temperature at a rate of $1.6 \text{ mA}/^\circ\text{C}$.
- Derate linearly above 70°C free air temperature at a rate of $0.9 \text{ mW}/^\circ\text{C}$.
- Derate linearly above 70°C free air temperature at a rate of $1.0 \text{ mW}/^\circ\text{C}$.
- Each channel.
- CURRENT TRANSFER RATIO is defined as the ratio of output collector current, I_O , to the forward LED input current, I_F times 100%.
- Device considered a two-terminal device: pins 1,2,3, and 4 shorted together and pins 5,6,7, and 8 shorted together.
- Measured between pins 1 and 2 shorted together, and pins 3 and 4 shorted together.
- Common mode transient immunity in Logic High level is the maximum tolerable (positive) dV_{CM}/dt on the leading edge of the common mode pulse V_{CM} to assure that the output will remain in a Logic High state (i.e. $V_O > 2.0\text{V}$). Common mode transient immunity in Logic Low level is the maximum tolerable (negative) dV_{CM}/dt on the trailing edge of the common mode pulse signal, V_{CM} to assure that the output will remain in Logic Low state (i.e. $V_O < 0.8\text{V}$).
- The $7.5\text{k}\Omega$ load represents 1 LSTTL unit load of 0.36mA and a $20\text{k}\Omega$ pull-up resistor.
- The $4.7\text{k}\Omega$ load represents 1 LSTTL unit load of 0.36mA and a $8.2\text{k}\Omega$ pull-up resistor.
- The $2500 \text{ V}_{RMS} / 1\text{ minute}$ capability is validated by a factory $3.1\text{k} \text{ V}_{RMS} / 1\text{ second}$ dielectric test.
