## 10. Function Description

### Charging Standards

IP2110 is a low-cost dedicated charging Physical Layer IC dedicated for charging applications where charging standards required to be negotiated between USB ports. IP2110 is needed at the host-side, when the attached portable client-side device negotiate the power allotment from the power source host-side.

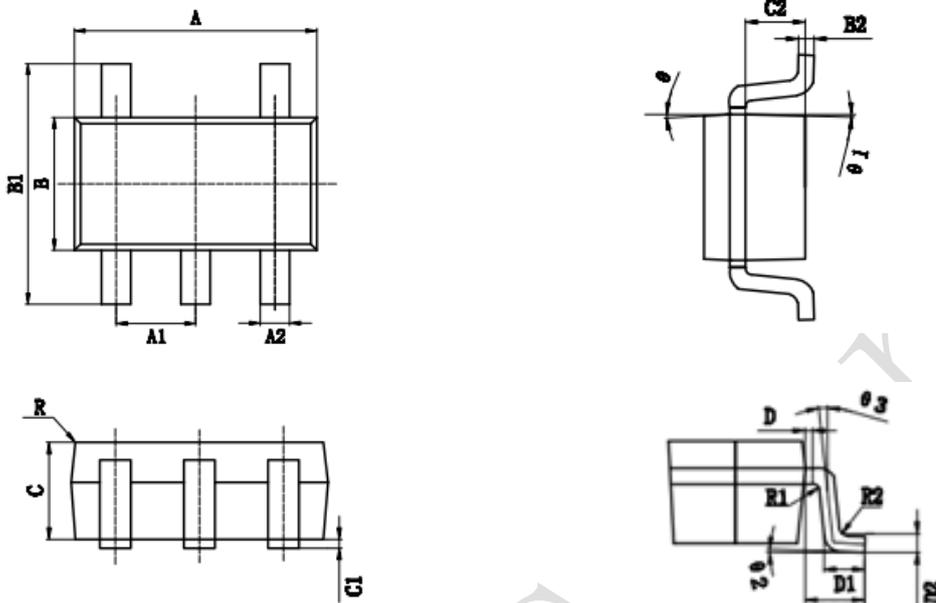

An auto-detect feature monitors USB data line voltage, and automatically provides the correct electrical signatures on the data lines to charge compliant devices. SEL pin used to configure the maximum allotment current. IP2110 supports Apple 2.4A/2.0A/1.0A, Samsung 2.0A and BC1.2. IP2110 is not in control of the charging power loop, the actual charging loop and charging current is determined by the host-side power source and the client-side USB port device.

### SEL

SEL line is used to configure the maximum current allotment for Apple, when SEL line is pull up to high-voltage of  $V_{\text{SELH}}$ , the maximum current allotment is 2.4A; when SEL line is floating, the maximum current allotment is 1.0A. Reverse the DP, DM on PCB board, the maximum current allotment is 2.0A. when the SEL line is pull down to GND, IP2110 will not respond to any charging requirements, DP, DM are in high-z state.

SEL1	Voltage
High ( $V_{\text{SELH}}$ )	2.4A
Float	1.0A
GND	Disable
