

IRHNJ7230

PD-93821C

**Radiation Hardened Power MOSFET
Surface Mount (SMD-0.5)
200V, 9.4A, N-channel, Rad Hard HEXFET™ Technology**

Features

- Single event effect (SEE) hardened
- Low total gate charge
- Simple drive requirements
- Hermetically sealed
- Light weight
- Surface Mount
- ESD rating: Class 1C per MIL-STD-750, Method 1020

Product Summary

- BV_{DSS} : 200V
- I_D : 9.4A
- $R_{DS(on),max}$: 0.40Ω
- $Q_{G,max}$: 50nC

Potential Applications

- DC-DC converter
- Motor drives
- Thermal management
- Electric propulsion

Product Validation

Qualified according to MIL-PRF-19500 for space applications

Description

IR HiRel rad hard HEXFET technology provides high performance power MOSFETs for space applications. This technology has over a decade of proven performance and reliability in satellite applications. These devices have been characterized for both Total Dose and Single Event Effects (SEE). The combination of low $R_{DS(on)}$ and low gate charge reduces the power losses in switching applications such as DC to DC converters and motor control. These devices retain all of the well-established advantages of MOSFETs such as voltage control, fast switching and temperature stability of electrical parameters.

2.4 Radiation Characteristics

IR HiRel radiation hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at IR HiRel is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 3 and 4) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
