Technical Data Sheet

Infrared Remote-control Receiver Module

IRM-V0xx/TR1-P Series

Features

- High shielding against electric field disturbance.
- Circular lens to improve the receive characteristic.
- Line-up for various center carrier frequencies.
- Low voltage and low power consumption.
- High immunity against ambient light.
- Photodiode with integrated circuit.
- TTL and CMOS compatibility.
- Long reception distance.
- High sensitivity.
- Side-received SMD.
- Suitable burst length ≥ 10 pulses/burst.
- This product itself will remain within RoHS compliant version.
- Pb free.

Descriptions

The device is a miniature SMD type infrared remote control system receiver that has been developed and designed by utilizing the most updated IC technology. The PIN diode and preamplifier are assembled on PCB, the epoxy package is designed as an IR filter. The demodulated output signal can directly be decoded by a microprocessor.

Applications

- 1. Optical switch
- 2. Light detecting portion of remote control
- AV instruments such as Audio, TV, VCR, CD, MD, etc.
- Home appliances such as Air-conditioner, Fan, etc.
- The other equipments with wireless remote control.
- CATV set top boxes
- Multi-media Equipment

The Notice of Application:

ERLIGH

Transmission remote control signal consist of four parts: Encode Part, IR Transmitter Source, IRM device, Decode Part

- 1. When IRM-V0xx code select frequency, it need to well understand the center system of encode part.
- 2. Strong or weak light of IR Transmitter can affect distance of transmission.
- 3. Minimum Burst Length Tburst (number of pulses per burst) : 10 cycles
- 4. It needs to ensure the translation range of decode part if it is applied to the pulse-width range.

If the above items hardly assure of its application, it'll cause NG(no good) message from the edge of signal.

Test Method :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

^①Measurement place

A place that is nothing of extreme light reflected in the room.

[©]External light

Project the light of ordinary white fluorescent lamps which are not high

Frequency lamps and must be less then 10 Lux at the module surface.

 $(Ee \leq 10Lux)$

③Standard transmitter

A transmitter whose output is so adjusted as to **Vo=400mVp-p** and the output Wave form shown in Fig.-1.According to the measurement method shown in

Fig.-2 the standard transmitter is specified.

However, the infrared photodiode to be used for the transmitter should be

 $\lambda p=940nm, \Delta \lambda=50nm$. Also, photodiode is used of PD438B(Vr=5V).

(Standard light / Light source temperature 2856°K).

Reliability Test Item And Condition

ERLIGHT

The reliability of products shall be satisfied with items listed below. Confidence level : 90% LTPD : 10%

Reflow Terms: JEDEC Level 4 Specification

Drying; Temp.:125°C 24hrs \rightarrow Moisture 30°C / 60% RH 96hrs \rightarrow Reflow Temp.: 260°C±5°C 10sec, 3 times

Note:

- 1. Not sooner than 15 minutes and not longer than 4 hours after removal from the temperature/humidity chamber.
- 2. The time between reflow shall be 5 minutes minimum and 60 minutes maximum.

Recommended method of storage

RLIGH

Dry box storage is recommended as soon as the aluminum bag has been opened prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10° C to 30° C
- Storage humidity $\leq 60\%$ RH max.

After more than 72 hours under these conditions moisture content will be too high for Reflow soldering:

In case of moisture absorption, the devices will recover to former condition by drying under the following condition:

192 hours at $40^{\circ}C+5^{\circ}C/-0^{\circ}C$ and 5% RH (dry air / nitrogen) or 96 hours at $60^{\circ}C+5^{\circ}C$ and < 5% RH for all device containers or 24 hours at $125^{\circ}C+5^{\circ}C$ not suitable for reel or tubes.

ESD Precaution

Proper storage and handing procedures should be followed to prevent ESD damage to the devices especially when they are removed from the Anti-static bag. Electro-Static Sensitive Devices warning labels are on the packing.

Recommended Solder Profile

Notice:

- (1) Reflow soldering should not be done more than two times.
- (2) When soldering, do not put stress on the IRM-V038/TR1 Series devices during heating.
- (3) After soldering, do not warp the circuit board.
