SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Check that all control knobs, shields, covers, ground straps, and mounting hardware have been replaced. Be absolutely certain that you have replaced all the insulators.
4. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
5. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
6. Check the line cords for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
7. Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC Leakage. Check leakage as described right.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOMs that are suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

SECTION 1
SELF-DIAGNOSIS FUNCTION

The identification of errors within the WAX chassis is triggered in one of two ways :- 1: Busy or 2: Device failure to respond to IIC. In the event of one of these situations arising the software will first try to release the bus if busy (Failure to do so will report with a continuous flashing LED) and then communicate with each device in turn to establish if a device is faulty. If a device is found to be faulty the relevant device number will be displayed through the LED (Series of flashes which must be counted).

TROUBLESHOOTING

Check whether the ⏻ (standby) indicator is flashing in red.

When it is flashing

The self-diagnosis function is activated.

1 Measure how long the ⏻ (standby) indicator flashes and stops flashing.
For example, the indicator flashes for two seconds, stops flashing for one second, and flashes for two seconds.

2 Press ⏻ on the TV (top side) to switch it off, disconnect the AC power cord, and inform your dealer or Sony service center of how the indicator flashes (duration and interval).

When it is not flashing

1 Check the items in the tables, below.

2 If the problem still persists, have your TV serviced by qualified service personnel.

Picture

Problem	C ause/Remedy
No picture (screen is dark) and no sound	• Check the power cord, antenna, and VCR connection. • The TV is not turned on. Press ⏻ on the TV (top side). • If the ⏻ (standby) indicator lights up in red, press I/⏻.
No picture	• The picture off feature is activated. (The ⊠ (Picture Off/Sleep Timer) indicator lights up in green.) Press any button except for ◿ +/-, I/⏻, 🔇, ♪ to cancel the picture off feature.
No picture or no menu information from equipment connected to the video input jack	• Check that the optional equipment is on and press →/⊞ repeatedly until the correct input symbol is displayed on the screen. • Check the connection between the optional equipment and the TV.
Distorted picture	• Check if any connected optional equipment is installed in front of the TV or beside the TV. When installing optional equipment, leave some space between the optional equipment and the TV. • When changing programs or selecting Text, turn off any equipment connected to the video input jack on the rear of the TV. • Broadcast signals are too strong. Turn off or disconnect the booster if it is in use.
Double images or ghosting	• Check antenna/cable connections. • Check the antenna location and direction. Contact a Sony dealer for advice. • Broadcast signals are reflected by nearby mountains or building. Use the fine tuning (“Fine) function (page 35). Otherwise, use a highly direction antenna. • Use of a booster is inappropriate. Turn off or disconnect the booster if it is in use.
Snowy picture and noisy sound	• The antenna connection is loose or the antenna cable is damaged. Check the cable and connection on the TV, VCR, and on the wall (page 15). • Channel presetting is inappropriate or incomplete. Perform “Manual Program” in the “Set Up” menu to preset the channel again (page 34). • The antenna type is inappropriate. Check the antenna type (VHF/UHF). Contact a Sony dealer for advice. • The antenna direction needs adjustment. Adjust the antenna direction. Contact a Sony dealer for advice. • Signal transmission is low. Try using a booster.

Problem	C ause/Remedy
Only snow and noise appear on the screen	• Check if the antenna is broken or bent. • Check if the antenna has reached the end of its serviceable life (three to five years in normal use, one to two years at the seaside).
Picture (dotted lines or stripes) noise	• Keep the TV away from electrical noise sources such as cars, motorcycles, or hair-dryers, etc. • Make sure that the antenna is connected using the antenna cable (supplied). • Keep the antenna cable away from other connecting cables. • Do not use a 300-ohm twin lead cable as interference may occur. • Adjust the antenna direction for the minimum interference. Contact a Sony dealer for advice.
Picture noise when viewing a TV channel	• Select “Manual Program” in the “Set Up” menu and adjust “Fine” to obtain better picture reception (page 35). • Select “NR” (Noise Reduction) in the “Picture” menu to reduce the noise in the picture (page 25).
Stripe noise during playback/ recording of a VCR	• Video head interference. Keep your VCR away from the TV. • Leave a space of 30 cm between your VCR and the TV to avoid noise. • Avoid installing your VCR in front of the TV or beside the TV.
Good picture, but noisy sound	• The TV system setting is inappropriate. If the sound of all the channels are noisy, perform “Auto Program” in the “Set Up” menu to preset the channel again (page 32). If the sound of some channels is noisy, select the channel, then perform “Manual Program” in the “Set Up” menu, and select the appropriate TV system (“TV System”) (page 34).
Good picture, but no sound	• The volume level is too low. Press + to increase the volume level. • The sound is muted. Press , or + to cancel the muting.
Some tiny black points and/or bright points on the screen	• The picture of a display unit is composed of pixels. Tiny black points and/or bright points (pixels) on the screen do not indicate a malfunction.
No color on programs	• Select “Reset” in the “Picture” menu to return to the factory settings (page 25).
