

KW45B (radio) and KW45Z (MCU)

KW45 Product Family

Highly Secure, Bluetooth Low Energy 5.3 Wireless MCU with CAN FD

Rev. 9 — 12/2022

Data Sheet: Technical Data

The KW45 product family is a low-power, highly secure, single-chip wireless MCU that integrates a high performance Bluetooth Low Energy version 5.3 radio and CAN FD for Automotive and Industrial applications.

The family integrates a state-of-the-art, scalable security architecture including Arm® TrustZone®-M, a resource domain controller, and an isolated EdgeLock™ Secure Enclave supporting hardware cryptographic accelerators, random number generators and key generation, storage and management and secure debug. Flash memory contents can optionally be stored as encrypted data and then decrypted on-the-fly enabling protection of sensitive data and algorithms.

For automotive applications, an integrated FlexCAN supporting CAN and CAN FD compliant with the ISO 11898-1 standard. The on-chip, low-power UARTs have LIN capabilities. The family is AEC-Q100 Grade 2 automotive certified, with an extended ambient operating temperature range up to +105 °C, MISRA C:2012, and Automotive SPICE (ASPICE) process compliant.

Pitch 0.5 mm

Wettable Flanks

Application core

- Up to 96 MHz Arm Cortex®-M33 core
- Up to 1 MB flash memory
- 128 KB SRAM
- TrustZone-M, IEEE 754 FPU, DSP, MPU, NVIC, SysTick
- 8 KB Code Cache to improve performance and efficiency
- Secure Boot ROM

Target applications

- Automotive
 - Secure Car Access
 - Keyless Entry
 - Passive Entry/Passive Start (PEPS) Systems
 - Wireless Battery Management Systems (WBMS)
- Industrial/IoT
 - Positioning/Localization
 - Building Control and Monitoring
 - Process/Factory Automation

Bluetooth Low Energy radio core

- Dedicated CM3 core running at up to 64 MHz
- 256 kB Flash supporting upgradable software radio
- 88 KB SRAM optimized for link layer support
- Up to 24 simultaneous connections
- -106 dBm 125 kbps Long Range Receive Sensitivity
- -102 dBm 500 kbps Long Range Receive Sensitivity
- -97.5 dBm 1 Mbps Receive Sensitivity
- -95 dBm 2 Mbps Receiver Sensitivity
- Programmable Transmit Output Power up to +10 dBm
- Data Rates: 125 kbps, 500 kbps, 1 Mbps, and 2 Mbps
- Modulation Types: 2 Level FSK, GFSK, MSK, GMSK
- Integrated memories in radio containing Bluetooth LE Controller Stack and radio drivers
- On-chip balun with single ended bidirectional RF port
- Low external component counts for low cost, small form-factor designs

Table continues on the next page...

NXP reserves the right to change the detail specifications as may be required to permit improvements in the design of its products.

General Business Information

— Access Control

EdgeLock Secure Enclave

- Secure boot and debug
- Trusted resource domain controller (TRDC) providing programmable control mechanisms for independent processing domains including embedded memory and peripherals

- Privilege/user
- Data only
- Execute only
- Read-only access
- Secure/Non-secure

Advanced flash access protection

- Write/Erase protection, Execute only, Data only access control
- Optional encryption and on-the-fly decryption using a PRINCE XEX block cipher mode

- Hardware encryption and decryption
 - Symmetric Key Encryption
 - AES-128/192/256
 - ECB, CBC, CTR, GCM, CMAC, and CCM Modes
 - Asymmetric Key Encryption
 - ECC NIST P-192/224/256/384/521
 - Curve25519
 - Key Exchange Algorithms
 - ECDH(E)
 - SPAKE2+
 - JPAKE
 - Digital Signature Algorithms
 - ECDSA
 - Ed25519
 - Hash Algorithms
 - SHA2-224/256/384/512
 - Poly1305
- Secure key generation, storage, and management

Safety

- Memory Protection Unit (MPU)
- Register write protection
- Illegal memory access
- Flash area protection
- SRAM Error Correction Code (ECC) and SRAM parity error check
- Clock Frequency Accuracy Measurement Circuit (CAC) using Signal Frequency Analyzer (SFA) module
- Cyclic Redundancy Check (CRC) calculator
- Two internal, independent and one external watchdog timer
- Clock loss detection
- Main oscillator stop detection (Loss of lock detection)
- Low voltage / high voltage detection

Low-power consumption (DCDC 3.6 V, 25 °C)

- Typical active core current: <5.3 mA at 96 MHz (<55 µA/MHz)
- Transceiver current (DC-DC buck mode, 3.3 V supply)
 - Typical RX: 4.7 mA
 - Typical TX at 0 dBm: 4.6 mA and 18.7 mA at 10 dBm
- Less than 3 µA in power-down mode with real-time clock (RTC) active and 32 KB SRAM retention
- Less than 1.5 µA in Deep Power-Down mode with RTC active
- Multiple power-down modes supporting currents as low as 300 nA
- Ultra-low leakage Smart Power Switch with less than 100 nA sleep current with exit from internal timer or GPIO.

Clocks

- 32 MHz RF crystal oscillator
- 32.768 kHz crystal oscillator
- Internal 192 MHz high frequency free running oscillator providing 48/64/96 MHz clock
- Internal low frequency free running oscillator providing 6 MHz clock
- Internal low power free running oscillator providing 32 kHz clock

Table continues on the next page...

- Pseudo (PRNG) and True Random Number Generator (TRNG) with 512-bits entropy supporting NIST SP 800-90A and SP 800-90B
- Support for secure over-the-air (OTA) firmware updates
- Four digital tamper pins with optional interrupt and seconds timestamp upon trigger
- Universally Unique ID (UUID) programmed by NXP during factory programming
- 24-bit unique IEEE media access control (MAC) subaddress
- Factory Root of Trust programming

System peripherals

- DC/DC converter supporting buck and bypass operating modes
- Asynchronous DMA controller with per channel access permissions (secure/non-secure)
- Two internal and one external watchdog monitors
- Nested vectored interrupt controller
- Wake-up unit for power-down modes

Timers

- Two 6-channel 32-bit timers (TPM) with PWM capability and DMA support
- Two 32-bit low-power timers (LPTMR) or pulse counters with compare features
- 4-channel 32-bit low-power periodic interrupt timer (LPIT) with DMA support
- One 56-bit timestamp timer
- 32-bit seconds real time counter (RTC) with 32-bit alarm and independent power supply
- Signal frequency analyzer (SFA) provides facilities for measurement of clock period/frequency as well as time between triggers

Input supply voltage options:

- Integrated DCDC regulator 1.8–3.6 V providing power to Core_LDO regulator, SYS_LDO regulators, and Radio
- Integrated Core_LDO regulator 1.2 V–3.6 V powering the core digital domain
- Integrated SYS_LDO regulator 1.71 V to 3.6 V powering the SYS domain
- DCDC and Core_LDO regulators can support bypass modes

Analog modules

- 16-bit single ended SAR Analog-to-digital converter (ADC) up to 2 Msps
- Two high-speed analog comparators (CMP) with 8-bit digital-to-analog converter (DAC)
- 1.0 V to 2.1 V Voltage Reference (Vref)

Communication interfaces

- FlexCAN with CAN and CAN FD supporting the full implementation of the CAN Specification Version 2.0, Part B. FD Support.
- Two Low Power UART (LPUART) modules with LIN support
- Two Low Power SPI modules and one MIPI-I3C module
- Two Low Power I2C (LPI2C) modules supporting the System Management Bus (SMBus) Specification, version 2
- One programmable FlexIO module supporting emulation of UART, I2C, SPI, Camera IF, LCD RGB, PWM/ Waveform generation

Human Machine Interface modules

- General-purpose input/output (GPIO)

Operating characteristics

- Temperature range (ambient): –40 °C to 105 °C
- Temperature range (junction): –40 °C to 125 °C
- DC/DC voltage range: 1.8 V to 3.6 V
- Bypass voltage range: 1.8 V to 3.6 V
- Qualification: AEC-Q100 Grade 2

1 Ratings

1.1 Thermal handling ratings

Table 5. Thermal handling ratings

Symbol	Description	Min.	Max.	Unit	Notes
T _{STG}	Storage temperature	–55	150	°C	1
T _{SDR}	Solder temperature, lead-free	—	260	°C	2

1. Determined according to JEDEC Standard JESD22-A103, *High Temperature Storage Life*.
2. Determined according to IPC/JEDEC Standard J-STD-020, *Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices*.

1.2 Moisture handling ratings

Table 6. Moisture handling ratings

Symbol	Description	Min.	Max.	Unit	Notes
MSL	Moisture sensitivity level	—	3	—	1

1. Determined according to IPC/JEDEC Standard J-STD-020, *Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices*.

1.3 ESD and Latch-Up Ratings

Table 7. ESD and Latch-Up Ratings

Description	Rating	Notes
Electrostatic discharge voltage, human body model	±2000 V	1
Electrostatic discharge voltage, charged-device model (corner pins and antenna pin excluded)	±500 V	2
Electrostatic discharge voltage, charged-device model (corner pins)	±750 V	
Electrostatic discharge voltage, charged-device model (antenna pin)	±250 V	
Latch-up immunity level (Class II at 125 °C junction temperature)	Immunity Level A	3

1. Determined according to JEDEC Standard JS-001-2017, *For Electrostatic Discharge (ESD) Sensitivity Testing, Human Body Model (HBM) - Component Level*.
2. Determined according to JEDEC Standard JS-002-2018, *For Electrostatic Discharge (ESD) Sensitivity Testing, Charged-Device Model (CDM) - Device Level*.
3. Determined according to JEDEC Standard JESD78F, *IC Latch-Up Test*.

1.4 Voltage and current maximum ratings

Table 8. Voltage and current maximum ratings

Symbol	Description	Min.	Max.	Unit
VDD_CORE	Supply voltage for most digital domains	–0.3	1.26	V
VDD_SYS	Supply voltage for PMC, EFUSE, SRTC, and FROs	–0.3	1.98 1	V

Table continues on the next page...

Table 8. Voltage and current maximum ratings (continued)

Symbol	Description	Min.	Max.	Unit
VDD_DCDC	Supply voltage for DCDC regulator	−0.3	3.63	V
VDD_IO_D	Supply voltage for LDO_SYS regulator, and PortD	−0.3	3.63	V
VDD_LDO_CORE	Supply voltage for LDO_CORE regulator	−0.3	3.63	V
VDD_RF	Supply voltage for OSC and radio analog	−0.3	3.6	V
VPA_2P4GHZ	Supply voltage for 2.4 GHz radio power amplifier	−0.3	2.8	V
VDD_IO_ABC	Supply voltage for Port A, Port B, Port C, Flash and CMP0/1	−0.3	3.63	V
VDD_ANA	Supply voltage for ADC, DAC, and VREF	−0.3	3.63	V
V _{IN}	Port input voltage	−0.3	3.63 ²	V
I _D	Maximum current single pin limit (digital output pins)	−25	25	mA
VOUT_SWITCH	Smart power switch output voltage	1.78 ³	3.6 ³	V

1. The part supports 2.75 V for up to 20 s over lifetime to allow fuse programming
2. The Max. of the V_{IN} cannot be greater than the voltage applied to the VDD_IO_x.
3. Current loading is less than 40 mA

1.5 Required Power-On-Reset (POR) Sequencing

When VDD_CORE is supplied by one of the internal regulators, VDD supply inputs can be powered up in any order. VDD supply inputs on power-up must not exceed VDD voltage maximums.

When powering VDD_CORE with an external supply, VDD_CORE must not be enabled until VDD_IO_ABC ≥ 1.65 V, as shown below.

Figure 2. VDD_CORE/VDD_IO_ABC Powering Sequence

1.6 Power Sequence

Table 9. Power Sequence

Symbol	Description	Order in sequence	Notes
VDD_SWITCH	Smart Power Switch input	1	1
VDD_DCDC/ VDD_IO_D	DCDC / PORT D / LDO_SYS regulator input	2	1
VDD_IO_ABC	Ports A, B, and C power rail input	2	1
VDD_ANA	Analog source input	2	1
VDD_LDO_CORE	Core power rail input	2	1
VDD_RF	RF power rail input	3	1
VPA_2P4GHz	RF PA voltage input	4	1

1. All domains can be powered at the same time. If external sources are used, make sure they start at the same time or they follow the order in the sequence.

2 General

2.1 AC electrical characteristics

Unless specified, propagation delays are measured from the 50 % to the 50 % point, and rise and fall times are measured at the 20 % and 80 % points, as shown in the following figure.

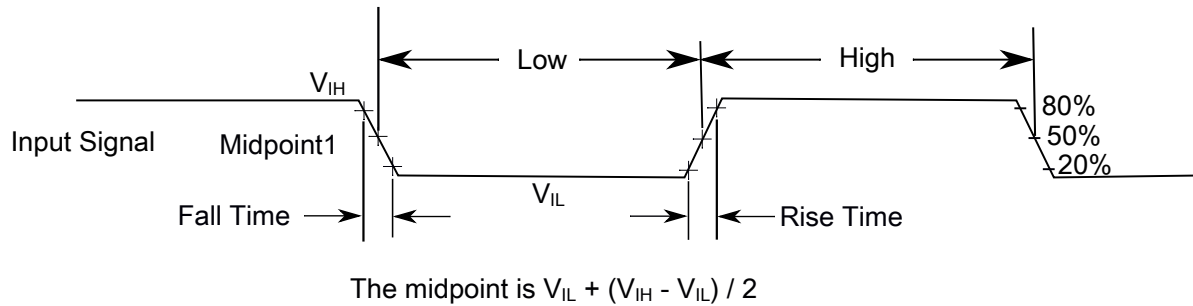

Figure 3. Input signal measurement reference

2.2 Nonswitching electrical specifications

2.2.1 Voltage and current operating requirements

Table 10. Voltage and current operating requirements

Symbol	Description	Min.	Max.	Unit	Notes
VDD_CORE	VDD_CORE input supply voltage			V	
	Mid Drive (1.0 V) Operation	1.0	1.1		
	Normal Drive (1.1 V) Operation	1.04	1.21		
	Safe-Mode Voltage (1.15 V) Operation	1.04	1.21		
VDD_SYS	Supply voltage for System Voltage Domain <ul style="list-style-type: none"> Normal mode Fuse Programming 	1.8 2.25	1.98 2.75	V	
VDD_DCDC	Supply voltage DCDC regulator	1.8	3.6	V	1
VDD_IO_D	Supply voltage for LDO_SYS regulator, PortD	1.86	3.6	V	2
VDD_LDO_CORE	Supply voltage for LDO_CORE regulator	1.25	3.6	V	
VDD_RF	Supply voltage for OSC and radio analog	1.175	3.6	V	
VPA_2P4GHz	Supply voltage for 2.4 GHz radio power amplifier	0.9	2.4	V	
VDD_IO_ABC	Supply voltage for PortA, PortB, Port C, and CMPs	1.71	3.6	V	3
VDD_ANA	Supply voltage for ADC, DAC, and VREF	1.71	3.6	V	
VSS - VSS_ANA	VSS-to-VSS_ANA differential voltage	-0.1	0.1	V	
V_IH	Input high voltage <ul style="list-style-type: none"> $1.71\text{ V} \leq \text{VDD_IO_ABC} \leq 3.6\text{ V}$ $1.86\text{ V} \leq \text{VDD_IO_D} \leq 3.6\text{ V}$ 	$0.7 \times \text{VDD_IO_ABC}$	— —	V	4

Table continues on the next page...

Table 10. Voltage and current operating requirements (continued)

Symbol	Description	Min.	Max.	Unit	Notes
		$0.7 \times VDD_I$ O_D			
V_{IL}	Input low voltage <ul style="list-style-type: none"> $1.71\text{ V} \leq VDD_IO_ABC \leq 3.6\text{ V}$ $1.86\text{ V} \leq VDD_IO_D \leq 3.6\text{ V}$ 	— —	$0.3 \times VDD_I$ O_ABC $0.3 \times VDD_I$ O_D	V	4
V_{HYS}	Input hysteresis	$0.1 \times VDD_I$ O_X	—	V	
I_{ICIO}	IO pin DC injection current — single pin <ul style="list-style-type: none"> $V_{IN} < VSS - 0.3\text{ V}$ (negative current injection) $V_{IN} > VDD + 0.3\text{ V}$ (positive current injection) 	0 —	— 0	mA	5, 6
V_{ODPU}	Open drain pullup voltage level	VDD_IO_X	VDD_IO_X	V	7

1. If DCDC is unused, then input supply should be tied to GND through a 10 kΩ resistor.
2. When LDO_SYS is bypassed, the input supply voltage is 1.8 V to 1.98 V and VDD_IO_D must be externally connected to VDD_SYS
3. If none of the PortA, PortB, and PortC pins are being used, then the VDD_IO_ABC can be left floating.
4. VIH and VIL for PTD0 are based of VDD_SYS instead of VDD_IO_D
5. All I/O pins are internally clamped to VSS and VDD_IO_x through an ESD protection diode. If V_{IN} is greater than $VDD_IO_x_MIN(= VSS - 0.3\text{ V})$ or is less than $VDD_IO_x_MAX(= VDD + 0.3\text{ V})$, then there is no need to provide current limiting resistors at the pads. If this limit cannot be observed, then a current limiting resistor is required.
6. This device does not allow pin injection current. User must ensure that VIN is kept within the Voltage Maximum Ratings.
7. Open drain outputs must be pulled to whichever supply voltage corresponds to that IO, VDD_IO_X as appropriate.

2.2.2 HVD, LVD, and POR operating requirements

The device includes low-voltage detection (LVD) and high-voltage detection (HVD) power supervisor circuits for following power supplies:

- VDD_IO_ABC
- VDD_CORE
- VDD_SYS

For VDD_SYS, it has Power-on-reset (POR) power supervisor circuits.

Table 11. VDD_IO_ABC supply HVD, LVD, and POR Operating Ratings

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
$V_{HVDH_IO_A}$ BC	VDD_IO_ABC Rising high-voltage detect threshold	3.730	3.810	3.890	V	
V_{HVDH_HYS} _IO_ABC	VDD_IO_ABC High-voltage inhibit reset/recover hysteresis	—	38	—	mV	
$V_{LVDH_IO_A}$ BC	VDD_IO_ABC Falling low-voltage detect threshold - high range	2.567	2.619	2.673	V	

Table continues on the next page...

Table 11. VDD_IO_ABC supply HVD, LVD, and POR Operating Ratings (continued)

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
V _{LVDH_HYS} _IO_ABC	VDD_IO_ABC Low-voltage inhibit reset/recover hysteresis - high range	—	27	—	mV	
V _{LVDL_IO_A} BC	VDD_IO_ABC Falling low-voltage detect threshold - low range	1.618	1.651	1.684	V	
V _{LVDV_HYS} _IO_ABC	VDD_IO_ABC Low-voltage inhibit reset/recover hysteresis - low range	—	20	—	mV	

Table 12. VDD_CORE supply HVD and LVD Operating Ratings

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
V _{HVD_CORE}	VDD_CORE Rising high-voltage detect threshold (HVD assertion) Target VDD_CORE = 1.05 V Target VDD_CORE = 1.1 V Target VDD_CORE = 1.15 V (safe mode LVD)	1.230	1.257	1.285	V	1
V _{HVD_HYS_CORE}	VDD_CORE High-voltage inhibit reset/recover hysteresis Target VDD_CORE = 1.05 V Target VDD_CORE = 1.1 V Target VDD_CORE = 1.15 V (safe mode LVD)	—	14	—	mV	1
V _{LVD_CORE}	VDD_CORE Falling low-voltage detect threshold (LVD assertion) Target VDD_CORE = 1.05 V Target VDD_CORE = 1.1 V Target VDD_CORE = 1.15 V (safe mode LVD)	0.944 0.989 1.043	0.963 1.009 1.064	0.983 1.029 1.086	V	
V _{LVD_HYS_CORE}	VDD_CORE Low-voltage inhibit reset/recover hysteresis Target VDD_CORE = 1.05 V Target VDD_CORE = 1.1 V Target VDD_CORE = 1.15 V (safe mode LVD)	— — —	14 14 17	— — —	mV	

1. Same value applies to all conditions.

Table 13. VDD_SYS supply HVD and LVD Operating Ratings

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
V _{HVD_SYS}	VDD_SYS Rising high-voltage detect threshold (HVD assertion) Target VDD_SYS = 1.8 V	2.035	2.077	2.120	V	1

Table continues on the next page...

Table 13. VDD_SYS supply HVD and LVD Operating Ratings (continued)

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
	Target VDD_SYS = 1.9 V (safe mode LVD)	2.035	2.077	2.120		
V _{HVD_HYS_SYS}	VDD_SYS High-voltage inhibit reset/recover hysteresis	—	22	—	mV	
V _{POR_SYS}	Falling VDD_SYS POR detect voltage (POR assertion)	0.8	1.0	1.5	V	
V _{LVD_SYS}	VDD_SYS Falling low-voltage detect threshold (LVD assertion)				V	
	Target VDD_SYS = 1.8 V	1.616	1.649	1.683		
	Target VDD_SYS = 1.9 V (safe mode LVD)	1.700	1.735	1.770		
V _{LVD_HYS_SYS}	VDD_SYS Low-voltage inhibit reset/recover hysteresis	—	19	—	mV	
V _{BG}	Bandgap voltage reference voltage	—	1.0	—	V	

1. When fuses are being programmed VDD_SYS is raised to 2.5 V nominal. This is outside the HVD bounds, so HVD detection for VDD_SYS must be disabled when programming fuses

2.2.3 Voltage and current operating behaviors

Table 14. Voltage and current operating behaviors

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
V _{OH}	Output high voltage — Normal drive strength <ul style="list-style-type: none"> 2.7 V ≤ VDD_IO_X ≤ 3.6 V, I_{OH} = 4 mA 1.71 V ≤ VDD_IO_ABC < 2.7 V, I_{OH} = 2.5 mA 1.86 V ≤ VDD_IO_D < 2.7 V, I_{OH} = 2.5 mA 	VDD_IO_X – 0.5	—	—	V	1
V _{OH}	Output high voltage — High drive strength <ul style="list-style-type: none"> 2.7 V ≤ VDD_IO_X ≤ 3.6 V, I_{OH} = 6 mA 1.71 V ≤ VDD_IO_ABC < 2.7 V, I_{OH} = 3.75 mA 1.86 V ≤ VDD_IO_D < 2.7 V, I_{OH} = 3.75 mA 	VDD_IO_X – 0.5	—	—	V	1,2
I _{OHT}	Output high current total for all ports	—	—	100	mA	
V _{OL}	Output low voltage — Normal drive strength <ul style="list-style-type: none"> 2.7 V ≤ VDD_IO_X ≤ 3.6 V, I_{OL} = 4 mA 1.71 V ≤ VDD_IO_ABC < 2.7 V, I_{OL} = 2.5 mA 1.86 V ≤ VDD_IO_D < 2.7 V, I_{OL} = 2.5 mA 	—	—	0.5	V	1,3
V _{OL}	Output low voltage — High drive strength <ul style="list-style-type: none"> 2.7 V ≤ VDD_IO_X ≤ 3.6 V, I_{OL} = 6 mA 	—	—	0.5	V	1,3,2

Table continues on the next page...

Table 14. Voltage and current operating behaviors (continued)

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
	<ul style="list-style-type: none"> 1.71 V \leq VDD_IO_ABC < 2.7 V, I_{OL} = 3.75 mA 1.86 V \leq VDD_IO_D < 2.7 V, I_{OL} = 3.75 mA 					
I _{OLT}	Output low current total for all ports	—	—	100	mA	
I _{IN}	Input leakage current (per pin) for full temperature range	—	—	1	μ A	4
I _{IN}	Input leakage current (per pin) at 25 °C	—	—	0.025	μ A	4
I _{IN}	Input leakage current (total all pins) for full temperature range	—	—	41	μ A	4
I _{OZ}	Hi-Z (off-state) leakage current (per pin)	—	—	1	μ A	
R _{PU}	Internal pullup resistors	33	50	75	k Ω	
R _{PU} (I3C)	Internal pullup resistors	1.1	2	2.833	k Ω	5
R _{PD}	Internal pulldown resistors	33	50	75	k Ω	
R _{HPU}	High-resistance pullup option (PORTx_PCRy[PV] = 1)	0.67	—	1.5	M Ω	6
R _{HPD}	High-resistance pulldown option (PORTx_PCRy[PV] = 1)	0.67	—	1.5	M Ω	6

1. When setting DSE1=1, the same VOH / VOL is met with IOH / IOL doubled.
2. RTC signals are always configured in high drive mode
3. Open drain outputs must be pulled to VDD_IO_X.
4. Measured at VDD_IO_X = 3.6 V.
5. Only I3C pins support this option
6. Only Port D pins support this option.

2.2.4 On-chip regulator electrical specifications

2.2.4.1 DCDC converter specifications

Table 15. DCDC Converter Specifications

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
V _{DD_DCDC}	DCDC input voltage	1.71	—	3.6	V	
V _{OUT_DCDC}	DCDC output voltage	1.25	—	2.5	V	1, 2
I _{LOAD}	DCDC load current					1, 3
	• Normal drive strength	—	—	105	mA	
	• Low drive strength	—	—	15	mA	
	• SPC_DCD_CFG[FREQ_CNTRL_ON]=1	—	—	45	mA	
LX	DCDC inductor value	0.47	1	2.2	μ H	4
ESR	External inductor equivalent series resistance	—	110	—	m Ω	5

Table continues on the next page...

Table 15. DCDC Converter Specifications (continued)

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
C _{OUT}	DCDC capacitance value	6	22	30	μF	6
V _{RIPPLE}	DCDC voltage ripple					
	• In normal drive strength	—	1	—	%	
	• In low drive strength	—	25	—	mV	
f _{burst}	DCDC burst frequency	3	5	8	MHz	7
f _{burst_acc}	DCDC burst frequency accuracy	—	10	—	%	7

1. The system DCDC converter generates 1.8 V at DCDC_LX by default. The DCDC can be used to power VDD_RF, VDD_LDO_CORE, and external components as long as the max I_{LOAD} is not exceeded.
2. The VDD_DCDC input supply to DCDC must be at least 500 mV higher than the desired output at DCDC_LX.
3. The maximum load current during boot up shall not exceed 60 mA.
4. Recommended inductor value is 1 μH to 1.5 μH. If the inductor is < 1 μH, the DCDC efficiency is not guaranteed.
5. The maximum recommended ESR is 250 mΩ (not a hard limit).
6. The variation in capacitance of the capacitor at DCDC_LX due to aging, temperature, and voltage degradation must not exceed the Min./Max. values.
7. FREQ_CNTRL_ON = 1.

DCDC Efficiency plots

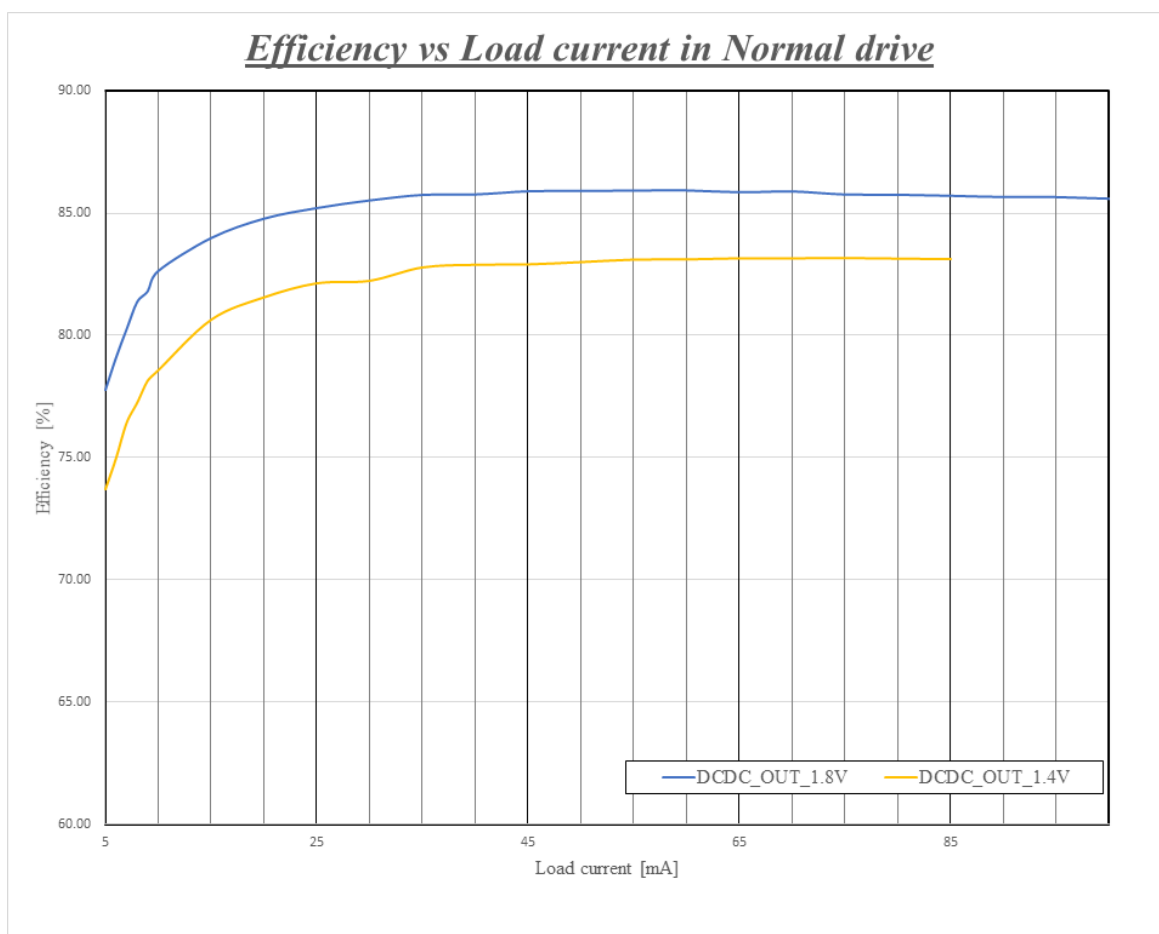

Figure 4. Efficiency vs Load current in Normal drive

Figure 5. Efficiency vs Load current in Low-power drive

2.2.4.2 LDO_SYS electrical specifications

Table 16. LDO_SYS electrical specifications

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
VDD_IO_D	LDO_SYS input supply voltage				V	1
	• LDO_SYS input supply voltage (Regulation mode)	1.86	—	3.6		
	• LDO_SYS input supply voltage (Bypass mode)	1.8	—	1.98		
	• Fuse programming mode	2.75	—	3.6		
VOUT_SYS	LDO_SYS regulator output voltage				V	2,3,4,5
	• Normal drive mode	1.71	1.8	1.98		
	• Fuse Programming mode	2.25	2.5	2.75		
I _{LOAD}	LDO_SYS maximum load current					

Table continues on the next page...

Table 16. LDO_SYS electrical specifications (continued)

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
	<ul style="list-style-type: none"> Normal drive mode Low drive mode Fuse programming mode 	—	—	50	mA	
		—	—	2	mA	
		—	—	40	mA	
I_{DD}	LDO_SYS power consumption					6
	<ul style="list-style-type: none"> Normal drive mode Low drive mode 	—	100	—	μ A	
		—	70	—	nA	
C_{OUT}	External output capacitor	—	1.5	10	μ F	
C_{DEC}	External output decoupling capacitor	—	0.1	—	μ F	
ESR	External output capacitor equivalent series resistance	—	30	—	m Ω	
I_{INRUSH}	LDO_SYS inrush current	—	—	120	mA	7

1. Regulator will automatically switch to passthrough (means the regulator driver is fully ON) with the supply is below 1.95 V.
2. The LDO_SYS converter generates 1.8 V by default at VOUT_SYS. VOUT_SYS can be used to power VDD_SYS, VDD_RF, VDD_IO_X, VDD_ANA, and external components as long as the max I_{LOAD} is not exceeded.
3. VOUT_SYS and VDD_SYS are connected together.
4. VDD_IO_D must be at least 150 mV higher than the desired VOUT_SYS.
5. LDO_SYS can be used to program efuse and in this configuration the output voltage can range between 2.25 V and 2.75 V.
6. In normal drive strength, LDO_SYS draws ~100 μ A for every 20 mA of load current.
7. This is for 1.5 μ F external output capacitor. If the capacitor has 10 μ F value, this value should be 300 mA instead.

2.2.4.3 LDO_CORE electrical specifications

Table 17. LDO_CORE electrical specifications

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
VDD_LDO_CORE	LDO_CORE input supply voltage	1.25	—	3.6	V	1, 2
VOUT_CORE	LDO_CORE regulator output voltage				V	
	<ul style="list-style-type: none"> Normal drive strength Low drive strength 	1.0	—	1.15		
		1.0	—	1.15		
I_{LOAD}	LDO_CORE max load current				mA	
	<ul style="list-style-type: none"> Normal mode - VDD_LDO_CORE \geq 1.5 V Normal mode - VDD_LDO_CORE < 1.5 V Low-power mode - VDD_LDO_CORE \geq 1.5 V Low-power mode - VDD_LDO_CORE < 1.5 V 	—	—	60		
		—	—	30		
		—	—	5		
		—	—	5		

Table continues on the next page...

Table 17. LDO_CORE electrical specifications (continued)

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
I_{DD}	LDO_CORE current consumption				μA	3
	• Normal drive strength - VDD_LDO_CORE \geq 1.5 V	—	—	150		
	• Normal drive strength - VDD_LDO_CORE < 1.5 V	—	—	75		
	• Low drive strength - VDD_LDO_CORE \geq 1.5 V	—	—	0.05		
	• Low drive strength - VDD_LDO_CORE < 1.5 V	—	—	0.05		
I_{INRUSH}	LDO_CORE inrush current	—	—	$5 \times I_{LOAD}$	mA	

1. To bypass LDO_CORE, tie VDD_LDO_CORE to VDD_CORE
2. The VDD_LDO_CORE input supply must also be at least 250 mV higher than the desired output at VOUT_CORE.
3. In normal drive strength, LDO_CORE draws ~40 μA for every 20 mA of load current. In low drive strength, LDO_CORE draws ~50 nA for every 100 μA of load current.

Table 18. LDO_CORE external device electrical specifications

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
C_{OUT}	External output capacitor	3.7	4.7	10	μF	
C_{DEC}	External output decoupling capacitor	—	0.1	—	μF	
ESR	External output capacitor equivalent series resistance	—	10	—	m Ω	

2.2.5 Smart power switch

NOTE

SWITCH_WAKEUP_B pad is internally pulled up to the switch input through a resistor, it can be pulled down to wake up the smart power switch. To generate a valid internal wake-up signal successfully, maximum value of SWITCH_WAKEUP_B pulldown voltage is 0.7 V, duration time should be larger than 1 μs .

Table 19. Smart power switch

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
V_{supply}	Input voltage (VDD_SWITCH)	1.9	—	3.6	V	
R_{ON}	Switch resistor at 'on' state	—	—	3	Ω	
I_{load}	Load current	—	—	40	mA	
$I_{leakage1}$	Typical leakage current when Vsupply = 2.7 V, 25 °C	—	4	—	nA	
$I_{leakage2}$	Maximum leakage current when Vsupply = 3.3 V	—	—	1	μA	

NOTE

If battery (with peak current limitation) is used to power VDD_SWITCH which power rest of chip supplies, it is not recommended to go to deep-power-down mode constantly. Because DCDC startup will introduce big peak current when wakeup.

2.2.6 Power mode transition operating behaviors

All specifications in the following table assume that the default clock configuration will be 96 MHz CPU_CLK/BUS_CLK and 24 MHz slow clock.

Table 20. Power mode transition operating behaviors

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
t _{SLEEP}	SLEEP → ACTIVE	—	8.95	9.4	μs	
t _{DSLEEP}	DEEP SLEEP → ACTIVE	—	9.6	10.1	μs	
t _{PWDN}	POWER DOWN → ACTIVE	233.86	234.33	234.59	μs	
t _{DPWDN}	Deep Power DOWN → ACTIVE	747.59	816.12	835.00	μs	

2.2.7 Power consumption operating behaviors

The KW45B41Z device has multiple power supplies that can be connected in different configurations, where the total current consumption of the device is the accumulative result of each individual power supply's current consumption. All current consumption specifications are measured with a bench power supply that provides externally the different voltage levels required by each power domain in the corresponding KW45 power mode configuration.

When calculating the total MCU current consumption, the following considerations should be made:

- Specifications below only include power for the MCU itself
- On top of the device's IDD current consumption, external loads applied to pins of the device need to be considered
- Efficiency of regulators (on-chip or off-chip) used to generate supply voltages should be considered

The maximum values stated in the following sections represent characterized results equivalent to the mean plus three times the standard deviation (mean + 6 sigma).

2.2.7.1 Power Consumption Operating Behaviors

Table 21. Power Consumption Operating Behaviors

1. All regulators enabled, 3.3 V supply upstream from the DCDC. DCDC output is 1.8 V, VDD_CORE = 1.0. SYS_LDO input = 3.3, output = 1.8 V.
2. FRO-192M as clock source

3. All regulators enabled, 3.3 V supply upstream from the DCDC. DCDC output is 1.35V, VDD_CORE =1.1. SYS_LDO input=3.3, output = 1.8 V.
4. All regulators enabled, 3.3 V supply upstream from the DCDC. DCDC output is 1.25V, VDD_CORE =1.0. SYS_LDO input=3.3, output = 1.8V.
5. All regulators are disabled. Voltages are come from external supplies. External 3.3V supply for VDD_SWITCH, VDD_ANA, VDD_IO_ABC and VDD_IO_D/DCDC_IN. External 1.8V supply for VDD_SYS and VDD_RF. External 1.0V supply for VDD_CORE.
6. All regulators are disabled. Voltages are come from external supplies. External 3.3V supply for VDD_SWITCH, VDD_ANA, VDD_IO_ABC and VDD_IO_D/DCDC_IN. External 1.8V supply for VDD_SYS and VDD_RF. External 1.1V supply for VDD_CORE.
7. 8 KB of retained RAM correspond to the last RAM block and is powered by the standby LDO in smart power switch domain
8. External 3.3 V supply to Smart Power Switch. Power switch output connected to DCDC_IN, LDO_SYS, VDD_ANA, VDD_IO_D and VDD_IO_ABC; DCDC output connected to LDO_CORE, VDD_RF

2.2.7.2 SoC Power Consumption

SoC Power Consumption table is as follows:

Table 22. SoC Power Consumption

CM33	Radio state	DCDC state	Typical Average IC current	Unit
Deep Sleep 2	Rx	Buck (Vdcdc_in =3.3 V)	6.6	mA
Deep Sleep 2	Rx (scan)	Buck (Vdcdc_in =3.3 V)	4.1	mA
Deep Sleep 2	Tx (+0 dBm)	Buck (Vdcdc_in =3.3 V)	5.2	mA
Deep Sleep 2	Tx (+4 dBm)	Buck (Vdcdc_in =3.3 V)	8.7	mA
Deep Sleep 2	Tx (+7 dBm)	Buck (Vdcdc_in =3.3 V)	12.5	mA
Deep Sleep 2	Tx (+10 dBm)	Buck (Vdcdc_in =3.3 V)	19.7	mA
Deep Sleep 2	Rx	Disabled/Bypass	8.7	mA
Deep Sleep 2	Rx (scan)	Disabled/Bypass	6.5	mA
Deep Sleep 2	Tx (+0 dBm)	Disabled/Bypass	11.4	mA
Deep Sleep 2	Tx (+4 dBm)	Disabled/Bypass	13.6	mA
Deep Sleep 2	Tx (+7 dBm)	Disabled/Bypass	19.0	mA
Deep Sleep 2	Tx (+10 dBm)	Disabled/Bypass	22.4	mA

2.2.7.3 Typical power-down mode RAM current adders

The table below shows typical current consumption adders on the VDD_CORE domain for different SRAM configurations. All currents are measured in power-down mode, but RAM adder should be similar for other modes.

Table 23. Typical power-down mode RAM current adders

SRAM array	Non-Secure Start Address	Non-Secure End Address	Size	-40 °C	25 °C	85 °C	105 °C	Unit
CTCM0	0x40000000	0x40001FFF	8 KB	0.061	0.070	1.49	2.44	μA
CTCM1	0x40002000	0x40003FFF	8 KB	0.020	0.026	1.80	2.70	μA
STCM0	0x20000000	0x20003FFF	16 KB	0.142	0.151	2.95	4.68	μA

Table continues on the next page...

Table 23. Typical power-down mode RAM current adders (continued)

SRAM array	Non-Secure Start Address	Non-Secure End Address	Size	-40 °C	25 °C	85 °C	105 °C	Unit

2.2.7.4 Low power mode peripheral power consumption adders

The following measurements were performed in DCDC mode with low drive strength configured at 1.25 V. Supply voltage is at 3.3 V

Table 24. Low power mode peripheral power consumption adders

Symbol	Description	Temperature	Unit
		25 °C	
LPTMR	LPTMR peripheral adder measured by placing the device in Deep Power-down mode using the FRO-32K configured for 1 second prescaler with 1 minute match. Include the FRO-32K power consumption.	252.9	nA
LPIT	LPIT peripheral adder measured by placing the device in Sleep mode with Wake Domain place in Sleep. Using FRO6M, configured for a 1 minute match. Does not include selected clock source power consumption.	3.2	μA
TSTMR	TSTMR peripheral adder measured by placing the device in Power-down mode with Wake Domain place in Sleep. Incrementing on the 1MHz clock output from the FRO6M. Does not include the selected clock source power consumption.	4.0	μA
TPM0	TPM0 peripheral adder measured by placing the device in Power-down mode with Wake Domain	4.1	μA

Table continues on the next page...

Table 24. Low power mode peripheral power consumption adders (continued)

	place in Sleep. Using FRO32K configured for output compare generating a 10Hz clock signal. No load is placed on the I/O pin generating the clock signal. Includes the clock source power consumption		
RTC	RTC peripheral adder measured with external 32 kHz OSC enabled with an alarm of 1 minute, by placing the device in Deep Power-down mode. Includes OSC-RTC (32 kHz external crystal) power consumption.	210.7	nA
LPUART1	LPUART1 peripheral adder measured by placing the device in Sleep mode with Wake Domain Sleep. Selected clock source FRO6M as clock source waiting for Rx data at 115200 BR, configuring CC=10b for MRCC_LPUART1. Does not include selected clock source power consumption.	4.2	μA
LPI2C1	LPI2C1 peripheral adder measured by placing the device in Sleep mode configured as Slave with digital glitch filter disabled. Does not include selected clock source power consumption.	3.2	μA
I3C	LPI3C peripheral adder measured by placing the device in Sleep mode with Wake Domain place in Sleep, while configured as slave. Does not include the clock source power	3.3	μA
LPSPi0	LPSPi0 peripheral adder measured by placing the device in Sleep mode with Wake Domain place in Sleep, while configured as Slave in SPI. Does not include	4.0	μA

Table continues on the next page...

Table 24. Low power mode peripheral power consumption adders (continued)

	the clock source power consumption.		
FlexCAN	FlexCAN peripheral adder measured by placing the device in Deep Sleep mode with Wake Domain placed in Deep Sleep and configured to receive the message and waiting for the next transmission of the user initiated. Does not include the clock source power	6.8	μA
FlexIO	FlexIO peripheral adder measured by placing the device in Sleep mode with Wake Domain Sleep, while Using FRO6M, emulating UART waiting for RX data at 115200 baudrate. Does not include selected clock source power consumption.	3.3	μA
ADC	ADC peripheral adder by placing the device in Sleep mode with Wake Domain place in Sleep. ADC in low power single ended mode using the FRO6M and 10Ksps continuous conversion. Does not include selected clock source power consumption.	4.1	μA
CMP	CMP peripheral adder measured with CMP enabled 8-bit DAC and single input for compare. The device is placed in Sleep mode with Wake Domain place in Sleep. Does not include 6-bit DAC power consumption	3.3	μA
VREF	VREF peripheral adder measured by placing the device in Sleep mode with Wake Domain place in Sleep. Generating a 1.2V reference output voltage	3.9	μA
WDOG	WDOG peripheral adder measured by placing the device in Sleep mode with	2.8	μA

Table continues on the next page...

Table 24. Low power mode peripheral power consumption adders (continued)

	Wake Domain place in Sleep. The peripheral is configured Using OSC-RTC (External 32kHz) using the longest timeout period possible. Includes the OSC_RTC current consumption

2.2.8 EMC radiated emissions operating behaviors

EMC measurements to IC-level IEC standards are available from NXP on request.

2.2.9 Designing with radiated emissions in mind

To find application notes that provide guidance on designing your system to minimize interference from radiated emissions:

1. Go to <https://www.nxp.com/>.
2. Perform a keyword search for “EMC design”.

2.2.10 Capacitance attributes

Table 25. Capacitance attributes

Symbol	Description	Min.	Max.	Unit
C _{IN_A}	Input capacitance: analog pins	—	7	pF
C _{IN_D}	Input capacitance: digital pins	—	7	pF

2.3 Switching specifications

2.3.1 Device clock specifications

Table 26. Device clock specifications

Symbol	Description	Min.	Max.	Unit	Notes
VDD_CORE = 1.1 V					
f _{CPU}	CPU clock (CPU_CLK)	—	96	MHz	
f _{BUS}	Bus clock (BUS_CLK)	—	96	MHz	
f _{SLOW}	Slow clock (SLOW_CLK)	—	24	MHz	
VDD_CORE = 1.0 V					
f _{CPU}	CPU clock (CPU_CLK)	—	48	MHz	
f _{BUS}	Bus clock (BUS_CLK)	—	48	MHz	
f _{SLOW}	Slow clock (SLOW_CLK)	—	24	MHz	

NOTE

By default, VDD_CORE = 1.0 V, f_{CPU_CLK}/f_{BUS_CLK} = 32 MHz, f_{SLOW_CLK} = 16 MHz.

2.3.2 General switching specifications

These general-purpose specifications apply to all signals configured for GPIO, LPUART, LPTMR, TPM, CAN, LPI2C, LPI3C, LPSPi, or FlexIO functions.

Table 27. General switching specifications

Description	Min.	Max.	Unit	Notes
GPIO pin interrupt pulse width (digital glitch filter disabled) — Synchronous path	1.5	—	Bus clock cycles	1
GPIO pin interrupt pulse width (digital glitch filter disabled, analog filter enabled) — Asynchronous path	150	—	ns	
GPIO pin interrupt pulse width (digital glitch filter disabled, analog filter disabled) — Asynchronous path	50	—	ns	
External RESET and NMI pin interrupt pulse width — Asynchronous path	330	—	ns	2
GPIO pin interrupt pulse width — Asynchronous path	16	—	ns	2
Port rise/fall time				
Normal I/O pins				3
• $2.7 \leq VDD_IO_x \leq 3.6\text{ V}$	2.9	7	ns	
— Fast slew rate (SRE = 0; DSE = 0)	6	15	ns	
— Slow slew rate (SRE = 1; DSE = 0)				
• $1.71 \leq VDD_IO_x < 2.7\text{ V}$	2.4	7	ns	
— Fast slew rate (SRE = 0; DSE = 1)	6.1	20	ns	
— Slow slew rate (SRE = 1; DSE = 1)				
Fast I/O pins				4
• $2.7 \leq VDD_IO_x \leq 3.6\text{ V}$	0.6	1.6	ns	
— Fast slew rate (SRE = 0; DSE = 0)	0.8	1.8	ns	
— Slow slew rate (SRE = 1; DSE = 0)				
• $1.71 \leq VDD_IO_x < 2.7\text{ V}$	0.4	1.6	ns	
— Fast slew rate (SRE = 0; DSE = 1)	0.6	1.9	ns	
— Slow slew rate (SRE = 1; DSE = 1)				
I2C/I3C I/O pins				5
• $2.7 \leq VDD_IO_x \leq 3.6\text{ V}$				
— Normal drive, fast slew rate (SRE = 0; DSE =)	3	7	ns	
— Normal drive, slow slew rate (SRE = 1; DSE = 0)	6.1	15	ns	
— High drive, fast slew rate (SRE = 0; DSE = 1)	2.8	7	ns	
— High drive, slow slew rate (SRE = 1; DSE = 1)	5.6	15	ns	
• $1.71 \leq VDD_IO_x < 2.7\text{ V}$				

Table continues on the next page...

Table 27. General switching specifications (continued)

Description	Min.	Max.	Unit	Notes
— Normal drive, fast slew rate (SRE = 0; DSE = 0)	2.8	7	ns	
— Normal drive, slow slew rate (SRE = 1; DSE = 0)	6.4	20	ns	
— High drive, fast slew rate (SRE = 0; DSE = 1)	2.3	7	ns	
— High drive, slow slew rate (SRE = 1; DSE = 1)	5.7	20	ns	
Reset and NMI pins				6
• $2.7 \leq VDD_IO_X \leq 3.6\text{ V}$	3.3	6.7	ns	
• $1.71 \leq VDD_IO_X < 2.7\text{ V}$	4.3	20	ns	

1. The synchronous and asynchronous timing must be met.
2. This is the shortest pulse that is guaranteed to be recognized.
3. Load is 25 pF. Drive strength and slew rate are configured using PORTx_PCRn[DSE] and PORTx_PCRn[SRE].
4. These are effectively Port C pins.
5. Load is 25 pF for DSE=0 or DSE=1. Load is 50 pF for DSE=2 or DSE=3. Drive strength and slew rate are configured using PORTx_PCRn[DSE1], PORTx_PCRn[DSE], and PORTx_PCRn[SRE].
6. Load is 25 pF.

2.4 Thermal specifications

2.4.1 Thermal operating requirements

Table 28. Thermal operating requirements

Symbol	Description	Min.	Typical	Max.	Unit	Notes
T_J	Die junction temperature	–40	25	125	°C	
T_A	Ambient temperature	–40	25	105	°C	1

1. Maximum T_A can be met only if the user ensures that T_J does not exceed the maximum. The simplest method to determine T_J is: $T_J = T_A + R_{\theta JA} \times \text{chip power dissipation}$.

2.4.2 Thermal attributes

Table 29. Thermal attributes

Board type	Symbol	Description	40 HVQFN	48 HVQFN	Unit	Notes
Four-layer (2s2p)	$R_{\theta JA}$	Thermal resistance, junction to ambient	28	26	°C/W	1, 2
Four-layer (2s2p)	Ψ_{JT}	Thermal characterization parameter, junction to package top center	0.2	0.2	°C/W	1, 2

1. Thermal test board meets JEDEC specification for this package (JESD51-7).
2. Determined according to JEDEC Standard JESD51-2, *Integrated Circuits Thermal Test Method Environmental Conditions —Natural Convection (Still Air)*.

3 Peripheral operating requirements and behaviors

3.1 Core modules

3.1.1 SWD electricals

Table 30. SWD timing

Symbol	Description	Min.	Max.	Unit
	Operating voltage	1.71	3.6	V
S1	SWD_CLK frequency of operation	—	25	MHz
S2	SWD_CLK cycle period	1/S1	—	ns
S3	SWD_CLK clock pulse width	20	—	ns
S4	SWD_CLK rise and fall times	—	3	ns
S5	SWD_DIO input data setup time to SWD_CLK rise	10	—	ns
S6	SWD_DIO input data hold time after SWD_CLK rise	0	—	ns
S7	SWD_CLK high to SWD_DIO data valid	—	25	ns
S8	SWD_CLK high to SWD_DIO high-Z	5	—	ns

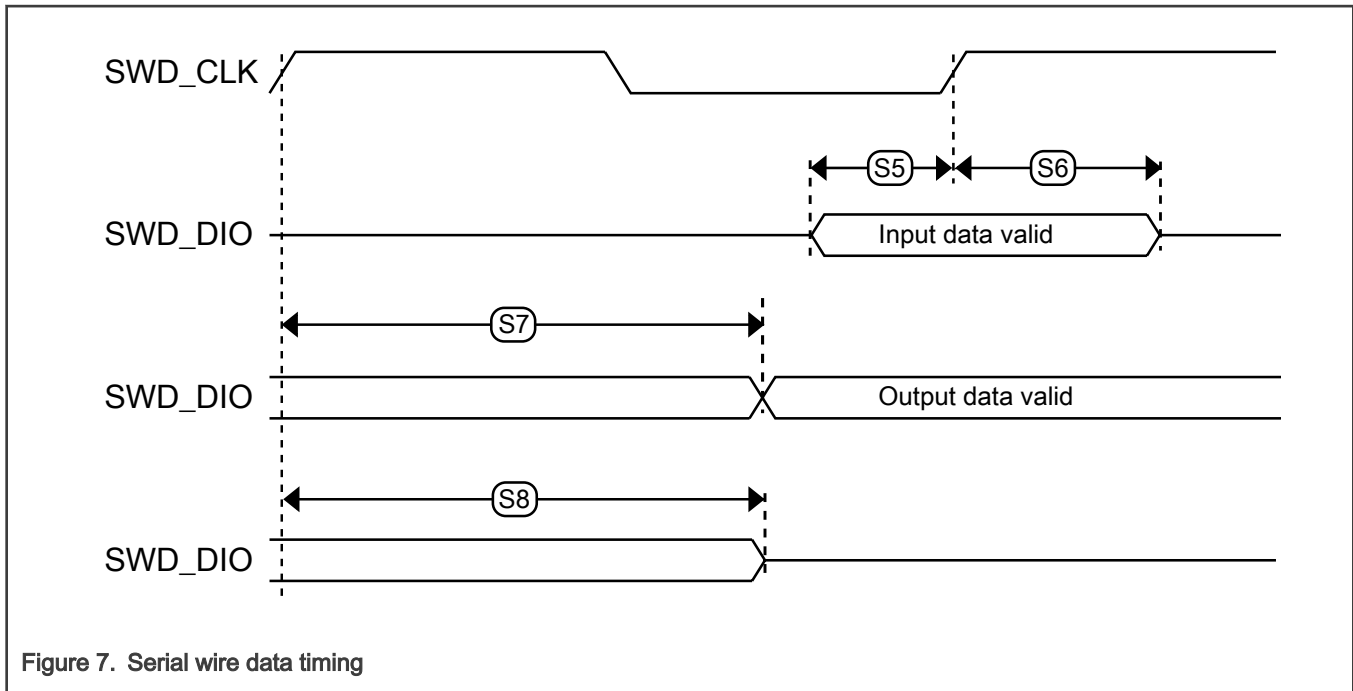

Figure 6. Serial wire clock input timing

3.2 Clock modules

3.2.1 Reference oscillator specification

This chip is designed to meet targeted specifications with a ± 50 ppm frequency error over the life of the part, which includes the temperature, mechanical, and aging excursions.

The table below shows typical specifications for the Crystal Oscillator.

Table 31. Reference Crystal Specification

Symbol	Description	F0 = 32.0 MHz			Unit	Footnotes
		Min	Typ	Max		
T _A	Operating Temperature	-40	—	105	°C	1
	Crystal frequency tolerance over Aging and Temperature	-33	—	30	ppm	2,3
	Oscillator variation	-17	—	20	ppm	4
	Total reference oscillator tolerance	-50	—	50	ppm	5
C _L	Load capacitance	6	8	10	pF	2,6
C ₀	Shunt capacitance	0.469	0.67	0.871	pF	2,6
C _{m1}	Motional capacitance	1.435	2.05	2.665	fF	2, 6
L _{m1}	Motional inductance	8.47	12.1	15.73	mH	2,6
R _{m1}	Motional resistance	—	25	50	Ohms	2

Table continues on the next page...

Table 31. Reference Crystal Specification (continued)

Symbol	Description	F0 = 32.0 MHz			Unit	Footnotes
		Min	Typ	Max		
ESR	Equivalent series resistance	—	50	60	Ohms	2, 7
P _d	Maximum crystal drive	—	—	200	μW	2
T _s	Trim sensitivity	6.30	9.00	11.70	ppm/pF	2,6
T _{osc}	Oscillator Startup Time	—	500	—	μs	8

- 1. Full temperature range of this device. A reduced range can be chosen to meet application needs.
- 2. Recommended crystal specification.
- 3. Combination of frequency stability variation over desired temperature range and frequency variation due to aging over desired lifetime of system.
- 4. Variation due to temperature, process, and aging of MCU.
- 5. Sum of crystal initial frequency tolerance, crystal frequency stability and aging, oscillator variation, and PCB manufacturing variation must not exceed this value.
- 6. Typical is target. 30 % tolerances shown.
- 7. $ESR = Rm1 * (1 + [Co/C_L])^2$.
- 8. Time from oscillator enables to clock ready. Dependent on the complete hardware configuration of the oscillator.

Figure 8. Crystal Electrical Block Diagram

3.2.2 32 kHz oscillator electrical specifications

Table 32. 32 kHz oscillator electrical specifications

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
f_{osc_32k}	Crystal frequency	—	32.768	—	kHz	
Tol	Frequency tolerance	—	±100	—	ppm	
Jit_{osc}	Jitter <ul style="list-style-type: none"> Period jitter (RMS) Accumulated jitter over 1 ms (RMS) 	— —	10 50	— —	ns	
ESR	Crystal equivalent series resistance	—	—	80/150	kΩ	1
C_{para}	Parasitic capacitance of EXTAL32 and XTAL32	—	1	2	pF	
t_{start}	Crystal start-up time	—	1000	8000	ms	2
I_{osc_32k}	Current consumption <ul style="list-style-type: none"> OFF mode ON mode 	— —	0.5 100	— —	nA	
V_{pp}	Peak-to-peak amplitude of oscillation	—	0.2	—	V	3
$f_{ec_extal32}$	Externally provided input clock frequency	—	32.768	—	kHz	4
$V_{ec_extal32}$	Externally provided input clock amplitude	—	VDD_SYS	—	mV	4, 5
$C_{extal/xtal}$	EXTAL, XTAL Load Capacitance	0	—	30	pF	6

1. Maximum value is 80 kΩ for parasitic capacitances higher than 1 pF, and 150 kΩ for parasitic capacitances around 1 pF.
2. Proper PC board layout procedures must be followed to achieve specifications.
3. When a crystal is being used with the 32 kHz oscillator, the EXTAL32 and XTAL32 pins should only be connected to required oscillator components and must not be connected to any other devices.
4. This specification is for an externally supplied clock driven to EXTAL32 and does not apply to any other clock input. The oscillator remains enabled and XTAL32 must be left unconnected.
5. The parameter specified is a peak-to-peak value and V_{IH} and V_{IL} specifications do not apply. The voltage of the applied clock must be within the range of V_{SS} to $V_{DD_IO_D}$.
6. With 2 pF steps.

NOTE

It is recommended that the oscillator margin be measured on the actual application PCB with the target crystal.

3.2.3 Free-running oscillator FRO-192M specifications

Table 33. FRO-192M specifications

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
$f_{fro192m}$	FRO-192M frequency (nominal)	96/192			MHz	
$\Delta f_{fro192m}$	Frequency deviation (−40 °C – 125 °C) <ul style="list-style-type: none"> Open loop 	— —	— —	±3 ±0.25	% %	

Table continues on the next page...

Table 33. FRO-192M specifications (continued)

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
	<ul style="list-style-type: none"> Closed loop (using accurate clock source as reference) 					
t_{startup}	Start-up time					
	<ul style="list-style-type: none"> Oscillation time with initial accuracy of $\pm 20\%$ to $\pm 2\%$ of enable signal assertion 	—	2	—	μs	
	<ul style="list-style-type: none"> Oscillation time within $\pm 2\%$ from enable signal assertion 	—	10	—	μs	
f_{os}	Frequency overshoot during startup	—	—	2	%	
jit_{per}	<ul style="list-style-type: none"> Period jitter RMS ¹ 	—	50	—	ps	
	<ul style="list-style-type: none"> Accumulated jitter over 1 μs 	—	375	—		
jit_{cyc}	Cycle to Cycle jitter RMS	—	60	—	ps	
I_{fro192m}	Current consumption	—	40	100	μA	

1. Reference clock = 192 MHz.

3.2.4 Free-running oscillator FRO-6M specifications

Table 34. FRO-6M specifications

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
f_{fro6m}	FRO-6M frequency (nominal)	—	6	—	MHz	
Δf_{fro6m}	Frequency deviation ($-40\text{ }^{\circ}\text{C} - 125\text{ }^{\circ}\text{C}$)					
	<ul style="list-style-type: none"> open loop 	—	—	± 3	%	
	<ul style="list-style-type: none"> closed loop (using accurate clock source as reference) 	—	—	± 0.6	%	
t_{startup}	Start-up time					
	<ul style="list-style-type: none"> Oscillation time with initial accuracy of -20% to $+2\%$ of enable signal assertion 	—	5	—	μs	
	<ul style="list-style-type: none"> Oscillation time within $\pm 2\%$ from enable signal assertion 	—	10	—	μs	
f_{os}	Frequency overshoot during startup	—	10	—	%	
I_{fro6m}	Current consumption	—	—	4	μA	

3.2.5 Free-running oscillator FRO-32K specifications

Table 35. FRO-32K specifications

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
f_{fro32k}	FRO-32K frequency (nominal)	—	32.768	—	kHz	

Table continues on the next page...

Table 35. FRO-32K specifications (continued)

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
Δf_{fro32k}	Frequency deviation(– 40 °C –125 °C) • open loop	—	—	±2	%	
TRIM _{step}	Trimming step	—	0.03	—	%	
t _{startup}	Start-up time	—	—	120	µs	
f _{os}	Frequency overshoot during startup • Trimmed	—	10	—	%	
I _{fro32k}	Current consumption	—	350	—	nA	

3.2.6 Free-running oscillator FRO-16K specifications

Table 36. FRO-16K specifications

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
V _{BAT}	Supply voltage operating range	1.9	2.7	3.6	V	1
Temp	Temperature range	–40	25	125	°C	
f _{fro16K}	FRO-16K frequency (nominal)	—	16.384	—	kHz	
Δf_{fro16K}	Frequency deviation • Over –40 °C~125 °C temperature range	—	—	±6	%	
TRIMstep	Frequency trimming step	—	1.5	—	%	
I _{fro16k}	Current consumption	—	50	—	nA	2
I _{por}	Current consumption	—	26	—	nA	

1. FRO-16K is in Power Switch block, which is powered by min 1.9 V VDD_SWITCH

2. The Typical value (70 nA) of current consumption includes 20 nA POR current consumption in stable running period.

3.3 Memories and memory interfaces

3.3.1 Flash electrical specifications

This section describes the electrical characteristics of the flash memory module.

3.3.1.1 Flash Read wait state control specifications

FCTRL[RWSC] defines the number of read wait-states in the flash module for FMC read access to the flash array during full power and low-power modes. The following requirements must be met.

Table 37. Recommend RWSC settings on KW45 (for MCU flash and Radio Flash)

Mode	Typical Frequency (MHz)	FCTRL[RWSC]
SD – 1.1 V	96	0010b
SD – 1.1 V	64	0001b
SD – 1.1 V	48	0001b

Table continues on the next page...

Table 37. Recommend RWSC settings on KW45 (for MCU flash and Radio Flash) (continued)

Mode	Typical Frequency (MHz)	FCTRL[RWSC]
MD – 1.0 V	48	0001b
MD – 1.0 V	32	0000b

3.3.1.2 Flash timing specifications

The following command times assume a flash bus clock frequency of 24 MHz. This clock come from SLOW_CLK. Command times will be increased by up to 10 μ s at 24 MHz if the module is exiting sleep mode when the command is launched. The time to abort a command is not included in the following table.

Table 38. Flash command time specifications

Symbol	Description	Typ.	Max.	Unit	Notes
$t_{rd1all1024k}$	Read 1s All execution time (1024 KB)	—	6200	μ s	
$t_{rd1blk1024k}$	Read 1s Block execution time (1024 KB)	—	6000	μ s	
t_{rd1scr}	Read 1s Sector execution time	—	50	μ s	1
t_{rd1pg}	Read 1s Page execution time	—	4.4	μ s	1
$t_{rd1pglv}$	Read 1s Page at low voltage execution time	—	5.8	μ s	1
$t_{rd1phrlv}$	Read 1s Phrase at low voltage execution time	—	4.8	μ s	1
$t_{rd1ipglv}$	Read 1s IFR Page at low voltage execution time	—	5.8	μ s	1
$t_{rd1iphrlv}$	Read 1s IFR Phrase at low voltage execution time	—	4.8	μ s	1
t_{rd1phr}	Read 1s Phrase execution time	—	3.8	μ s	1
$t_{rdmisr8k}$	Read into MISR (8 KB)	—	50	μ s	1
$t_{rdmisr1024k}$	Read into MISR (1024 KB)	—	6000	μ s	1
$t_{rd1iscr}$	Read 1s IFR Sector execution time	—	50	μ s	1
t_{rd1ipg}	Read 1s IFR Page execution time	—	4.4	μ s	1
$t_{rd1iphr}$	Read 1s IFR Phrase execution time	—	3.8	μ s	1
$t_{rdimisr8k}$	Read IFR into MISR (8 KB)	—	50	μ s	1
$t_{rdimisr32k}$	Read IFR into MISR (32 KB)	—	190	μ s	1
t_{pgmpg}	Program Page execution time	450	1000	μ s	2
t_{pgmphr}	Program Phrase execution time	135	375	μ s	2
$t_{ersall1024k}$	Erase All execution time (1024 KB)	—	2800	ms	
$t_{masers1024k}$	Mass Erase execution time (1024 KB)	—	2800	ms	
t_{ersscr}	Erase Sector execution time	2	22	ms	2

1. Time to abort the command may significantly impact the time to execute the command.
2. Measured from the time PERDY is cleared.

3.3.1.3 Flash high voltage current behavior

Table 39. Flash high voltage current behavior

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
I _{DD_IO_PGM}	Average current added to VDD_IO_x during flash programming operation	—	—	6	mA	¹
I _{DD_IO_ERS}	Average current added to VDD_IO_x during flash erase operation	—	—	4	mA	¹

1. See the Power Management chapter in the reference manual for the specific VDD_IO_x voltage supply powering the flash array.

3.3.1.4 Flash reliability specifications

Table 40. Flash reliability specifications

Symbol	Description	Min.	Typ. ¹	Max.	Unit	Notes
Program Flash						
t _{nmretp10k}	Data retention after up to 10 K cycles	10	50	—	years	
n _{nmcyccscr}	Sector cycling endurance	10 K	500 K	—	cycles	²
T _{nmretp1k}	Data retention after up to 1 K cycles	20	100	—	years	
T _{nmretp100k}	Data retention after up to 100 K cycles	5	50	—	years	
N _{nmcycc256k}	Sector cycling endurance for 256 KB per array block	100 K	500 K	—	cycles	³

1. Typical data retention values are based on measured response accelerated at high temperature and derated to a constant 25 °C use profile.
2. Sector cycling endurance represents the number of Program/Erase cycles on a single sector at -40 °C ≤ T_j ≤ 125 °C.
3. For devices with a single flash block, sectors must be located within the last 256 KB of the flash main memory. For devices with two flash blocks, sectors must be located within the last 256 KB of each flash main memory.

3.4 Radio modules

3.4.1 2.4 GHz radio transceiver electrical specification

Table 41. 2.4 GHz radio transceiver specifications

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
VDD_RF	RF supply voltage	1.175	1.2	3.6	V	
VPA_2P4_GHZ	Supply voltage for 2.4 GHz radio power amplifier	0.9	—	2.4	V	^{1, 2}
f _{in}	Input RF frequency	2.360	—	2.4835	GHz	
f _c	Output RF frequency	2.360	—	2.4835	GHz	
P _{max}	RF input power	—	—	10	dBm	
f _{ref}	Crystal reference oscillator frequency	—	32	—	MHz	

Table continues on the next page...

Table 41. 2.4 GHz radio transceiver specifications (continued)

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
f_{tol}	Frequency tolerance	—	±50	—	ppm	
T_{rx_tx}	Rx - Tx turnaround time	—	150	—	μs	³

1. Voltage required at this rail depends on the desired output power. See [Transmit and PLL Feature Summary](#) for the required voltages.
2. VPA_2P4GHZ is internally connected to the VDD_RF pin. When not powered externally, VPA_2P4GHZ = VDD_RF - 0.275 V. An internal regulator prevents VPA_2P4GHZ from going above 2.4 V when powered through the VDD_RF pin.
3. Bluetooth LE. Other modes have different requirements

3.4.2 Receiver Feature Summary

Table 42. Top-level Receiver Specifications ($T_A = 25\text{ }^{\circ}\text{C}$, nominal process unless otherwise noted)

Characteristic ¹	Symbol	Min.	Typ.	Max.	Unit
Receiver Active Power Consumption					
Supply current Rx On with DC-DC converter enable (Buck; VDD_DCDC = 3.3 V, VDD_RF = VDD_LDO_CORE = 1.25 V) ²	I_{Rxon}	—	4.68	—	mA
Supply current Rx On with DC-DC converter disabled (Bypass, VDD_RF = VDD_LDO_CORE = 3.3 V) ²	I_{Rxon}	—	10.01	—	mA
Receiver General Specifications					
Input RF Frequency	F_{in}	2.360	—	2.4835	GHz
GFSK Rx Sensitivity(250 kbps GFSK-BT = 0.5, h = 0.5) ³	$SENS_{GFSK}$	—	-103	—	dBm
Max RX RF Input Signal Level	RF_{inMax}	—	—	10	dBm
Noise Figure for maximum gain mode @ typical sensitivity ⁴	NF_{HG}	—	6.5	—	dB
Receiver Signal Strength Indicator Range ⁵	$RSSI_{Range}$	-100	—	0 ⁶	dBm
Receiver Signal Strength Indicator Resolution	$RSSI_{Res}$	—	1	—	dB
Typical RSSI variation over frequency		-2	—	2	dB
Typical RSSI variation over temperature		-2	—	2	dB
Narrowband RSSI accuracy ⁷	$RSSI_{Acc}$	-3	—	3	dB
Spurious Emission < 1.6 MHz offset (Measured with 100 kHz resolution and average detector. Device transmit on RF channel with center frequency f_c and spurious power measured in 1 MHz at RF frequency f), where $ f-f_c < 1.6$ MHz	—	—	-54	—	dBc
Spurious Emission > 2.5 MHz offset (Measured with 100 kHz resolution and average detector. Device transmit on RF channel with center frequency f_c and spurious power measured in 1 MHz at RF frequency f), where $ f-f_c > 2.5$ MHz ⁸	—	—	-70	—	dBc
Bluetooth LE coded 125 kbps (Long Range, 8x Spreading)

Bluetooth LE 2 Mbps Intermodulation with continuous wave interferer at ± 6 MHz and modulated interferer is at ± 12 MHz (or ± 16 MHz) -- Wanted signal at -67 dBm , BER $< 0.1\%$.	IM3-6 _{BLE2M}	—	-28	—	dBm
Bluetooth LE 2 Mbps Intermodulation with continuous wave interferer at ± 8 MHz (± 10 MHz) and modulated interferer is at ± 16 MHz (or ± 20 MHz) -- Wanted signal at -67 dBm , BER $< 0.1\%$.	IM4-8 _{BLE2M} IM4-10 _{BLE2M}	—	-32	—	dBm
<i>Blocking Performance</i>					
Bluetooth LE 2 Mbps Out of band blocking from 30 MHz to 1000 MHz and 4000 MHz to 5000 MHz (Wanted signal at -67 dBm , BER $< 0.1\%$. Interferer continuous wave signal.) ¹²	—	-4	—	—	dBm
Bluetooth LE 2 Mbps Out of band blocking from 1000 MHz to 2000 MHz and 3000 MHz to 4000 MHz (Wanted signal at -67 dBm , BER $< 0.1\%$. Interferer continuous wave signal.)	—	-10	—	—	dBm
Bluetooth LE 2 Mbps Out of band blocking from 2001 MHz to 2339 MHz and 2484 MHz to 2999 MHz (Wanted signal at -67 dBm , BER $< 0.1\%$. Interferer continuous wave signal.) ¹³	—	-10	—	—	dBm
Bluetooth LE 2 Mbps Out of band blocking from 5000 MHz to 12750 MHz (Wanted signal at -67 dBm , BER $< 0.1\%$. Interferer continuous wave signal.) ¹³	—	2	10	—	dBm

1. All the RX parameters are measured at the RF pins.
2. Transceiver power consumption.
3. Variation across temperature ($-40\text{ }^{\circ}\text{C}$ to $105\text{ }^{\circ}\text{C}$) is up to 3 dB.
4. Receiver noise Figure is computed from RF pin to composite (I+jQ) ADC output
5. Narrow-band RSSI mode.
6. With RSSI_CTRL_0.RSSI_ADJ field calibrated to account for antenna to RF input losses.
7. With one point calibration over frequency and temperature.

8. Exceptions allowed for twice the reference clock frequency(fref) multiples.
9. Measured at 0.1 % BER using 37 byte long packets in maximum gain mode and nominal conditions.
10. Bluetooth LE adjacent and alternate selectivity performance is measured with modulated interference signals.
11. Exceptions allowed for multiple of XTAL frequency
12. Exceptions allowed for carrier frequency sub harmonics.
13. Exceptions allowed for carrier frequency harmonics.

Table 43. Receiver Specifications with Generic FSK Modulations

Modulation type	Data rate (kb/s)	Channel BW (kHz)	Typical sensitivity (dBm) ²	Adjacent/Alternate channel selectivity (dB) ¹					
				Desired signal level (dBm)	Interferer at ±1* channel BW offset	Interferer at ±2* channel BW offset	Interferer at ±3* channel BW offset	Interferer at ±4* channel BW offset	Co-channel
GFSK BT = 0.5, h = 0.5	2000	4000	-95	-67	5	45/35	52	55	7
	1000	2000	-98	-67	0	42/32	52/42	55	7
	500	1000	-101	-85	40	50/35	55	55	6
	250	500	-103	-85	38	48	52	55/35	6

1. Selectivity measured with an unmodulated blocker.
2. Variation across temperature (-40 °C to 105 °C) is up to 3 dB.

3.4.3 Transmit and PLL Feature Summary

- Supports constant envelope modulation of 2.4 GHz ISM frequency band.
- Fast PLL Lock time: < 25 µs
- Reference Frequency:
 - 32 MHz crystals supported for Bluetooth LE and Generic FSK modes

Table 44. Top-level Transmitter Specifications (T_A = 25 °C, nominal process unless otherwise noted)

Characteristic ¹	Symbol	Min.	Typ.	Max.	Unit
Transmitter Active Power Specifications					
Supply current Tx On with P _{RF} = 0 dBm and DC-DC converter enabled (Buck; VDD_DCDC = 3.3 V, VDD_RF = VDD_LDO_CORE = 1.25 V) ²	I _{TX0dBm}	—	4.60	—	mA
Supply current Tx On with P _{RF} = 0 dBm and DC-DC converter disabled (Bypass, VDD_RF = VDD_LDO_CORE = 3.3 V) ²	I _{TX0dBmb}	—	9.83	—	mA
Supply current Tx On with P _{RF} = +4 dBm and DC-DC converter enabled (Buck; VDD_DCDC = 3.3 V, VDD_RF = VDD_LDO_CORE = 1.25 V) ²	I _{TX4dBm}	—	7.63	—	mA
Supply current Tx On with P _{RF} = +4 dBm and DC-DC converter disabled (Bypass, VDD_RF = VDD_LDO_CORE = 3.3 V) ²	I _{TX4dBm}	—	11.89	—	mA
Supply current Tx On with P _{RF} = +7 dBm and DC-DC converter enabled (Buck; VDD_DCDC = 3.3 V, VDD_RF = VDD_LDO_CORE = 1.8 V) ²	I _{TX7dBm}	—	10.79	—	mA

Table continues on the next page...

Table 44. Top-level Transmitter Specifications ($T_A = 25\text{ }^{\circ}\text{C}$, nominal process unless otherwise noted) (continued)

Characteristic ¹	Symbol	Min.	Typ.	Max.	Unit
Bluetooth LE 2 Mbps RMS FSK Error	$FSK_{err,BLE2M}$	—	4%	—	
Bluetooth LE 2 Mbps Adjacent Channel Transmit Power at 4 MHz offset ⁸	$P_{RF4MHz,BLE2M}$	—	—	-55	dBc
Bluetooth LE 2 Mbps Adjacent Channel Transmit Power at ≥ 6 MHz offset ⁸	$P_{RF6MHz,BLE2M}$	—	—	-60	dBc

1. All the TX parameters are measured at test hardware SMA connector.
2. Transceiver power consumption. NBU running at @16 MHz.
3. Measured at RF pins, with $V_{PA_2P4GHz} \geq 2.4\text{ V}$.
4. Variation across temperature ($-40\text{ }^{\circ}\text{C}$ to $105\text{ }^{\circ}\text{C}$) is up to 3 dB.
5. Measured at the RF pins single supply configuration $VDD_RF = VDD_LDO_CORE = 1.25\text{ V}$.
6. Maximum drift of carrier frequency of the PLL during a Bluetooth LE packet with a nominal 32 MHz reference crystal.
7. Harmonic levels based on recommended 2 component match for TX output power $\leq 5\text{ dBm}$. Transmit harmonic levels depend on the quality of matching components. Additional harmonic margin using a 3rd matching component (1x shunt capacitor) is possible.
8. Measured at $P_{out} > 5\text{ dBm}$ and recommended high-power TX match.

Transmit PA driver output as a function of the TX-PA_POWER[5:0] field when measured at the IC pins is as follows:

Figure 9. TX Pout (dBm) as function TX-PA Power Code at RF pins

3.5.1 ADC electrical specifications

3.5.1.1 16-bit ADC operating conditions

Table 48. 16-bit ADC operating conditions

Symbol	Description	Min.	Typ. ¹	Max.	Unit	Notes
V _{DD_ANA}	Supply voltage	1.71	—	3.6	V	
ΔV _{DD_ANA}	Supply voltage delta to V _{DD} (V _{DD} – V _{DD_ANA})	–0.1	0	+0.1	mV	2
ΔV _{SS_ANA}	Ground voltage delta to V _{SS} (V _{SS} – V _{SS_ANA})	–0.1	0	+0.1	mV	2
V _{REFH}	ADC reference voltage high	0.99	V _{DD_ANA}	V _{DD_ANA}	V	
V _{REFL}	ADC reference voltage low	V _{SS_ANA}	V _{SS_ANA}	V _{SS_ANA}	V	3
V _{ADIN}	Input voltage	V _{REFL}	—	V _{REFH}	V	3, 4, 5

Table continues on the next page...

Table 48. 16-bit ADC operating conditions (continued)

Symbol	Description	Min.	Typ. ¹	Max.	Unit	Notes
f _{ADCK}	ADC input clock frequency					
	• Low-power mode (PWRSEL=00)	6	—	20	MHz	
	• High-speed 16b mode (PWRSEL = 10)	6	—	48	MHz	
	• High-speed 12b mode (PWRSEL = 10)	6	—	60	MHz	
C _{ADIN}	Input capacitance	—	3.7	4.63	pF	
C _p	Parasitic Cap of pad /package	—	2	3	pF	
R _{AS}	Analog source resistance (external)	—	—	5	kΩ	6
R _{ADIN}	• High-speed dedicated input channel (CH0:3)				kΩ	7,8
	— V _{DD_ANA} ≥ 1.71 V	—	0.95	1.7		
	— V _{DD_ANA} ≥ 2.1 V	—	0.95	1.6		
	— V _{DD_ANA} ≥ 2.5 V	—	0.95	1.4		
	• Standard external input channel (Ch4:7)					
	— V _{DD_ANA} ≥ 1.71 V	—	1.35	3.25		
	— V _{DD_ANA} ≥ 2.1 V	—	1.35	2.15		
	— V _{DD_ANA} ≥ 2.5 V	—	1.35	1.75		
	• Standard muxed input channel (Ch4:11)					
	— V _{DD_ANA} ≥ 1.71 V	—	1.65	7.25		
	— V _{DD_ANA} ≥ 2.1 V	—	1.65	3.05		
	— V _{DD_ANA} ≥ 2.5 V	—	1.65	2.35		

1. Typical values assume V_{DD_ANA} = 3.0 V, Temp = 25 °C, f_{ADCK} = 24 MHz, unless otherwise stated. Typical values are for reference only, and are not tested in production.
2. DC potential difference.
3. For devices that do not have a dedicated VREFL and VSS_ANA pins, VREFL and VSS_ANA are tied to VSS internally.
4. If V_{REFH} is less than V_{DD_ANA}, then voltage inputs greater than V_{REFH} but less than V_{DD_ANA} are allowed but result in a full scale conversion result
5. ADC selected inputs and unselected dedicated inputs must not exceed V_{DD_ANA} during an ADC conversion. Unselected muxed inputs may exceed V_{DD_ANA} but must not exceed the IO supply associated with the inputs (VDD_IO_X) when a conversion is in progress. If an ADC input may exceed these levels, then a minimum of 1 K series resistance must be used between the source and the ADC input pin.
6. This resistance is external to MCU. To achieve the best results, the analog source resistance must be kept as low as possible.
7. There are several types of ADC inputs. To see which channels correspond to which type of ADC inputs, see channel index map in reference manual
8. If the input come through a mux in the IO pad, add the IO Mux Resistance Adder value to the resistance for the channel type

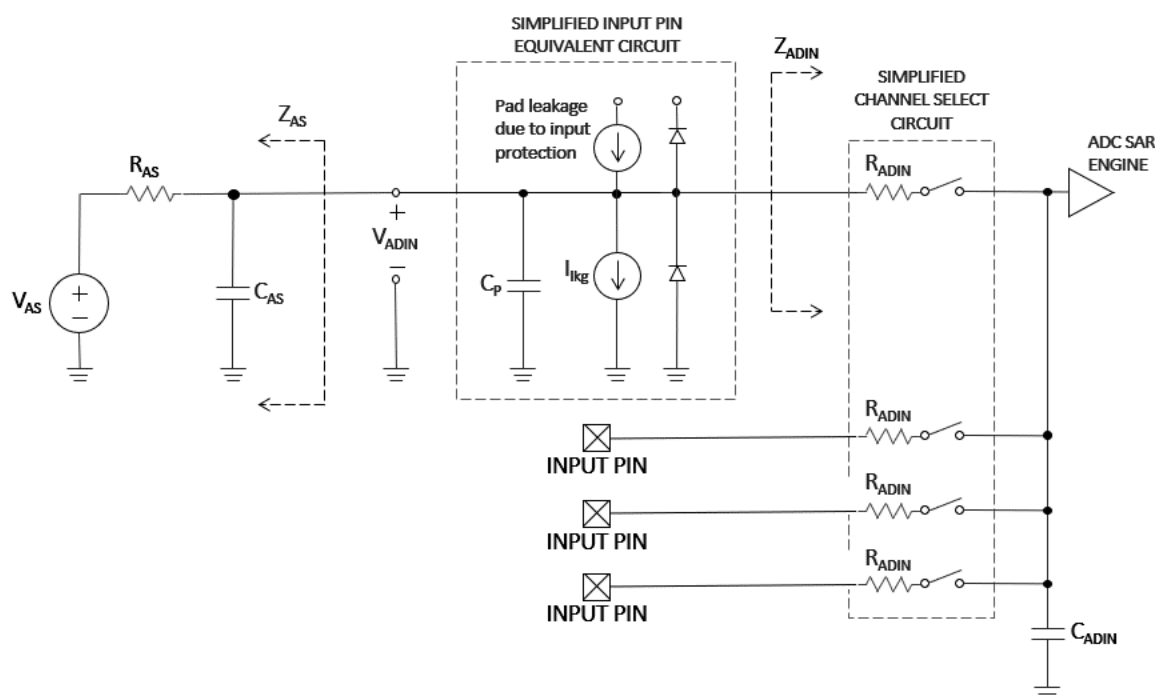

Figure 12. ADC input impedance equivalency diagram

Table continues on the next page...

Table 49. 16-bit ADC characteristics (VREFH = VDD_ANA, VREFL = VSS_ANA) (continued)

Symbol	Description	Min.	Typ. ¹	Max.	Unit	Notes
T _{SU}	ADC/VREF start-up time	5	—	—	μs	11
E _{IL}	Input leakage error	—	I _{lkg} × R _{AS}	—	mV	12
E _{TS}	Temperature sensor error	—	±1	±3	°C	13
		—	±1.5	±4		

1. Typical values assume V_{DD_ANA} = 3.0 V, Temp = 25 °C, f_{ADCK} = 24 MHz unless otherwise stated. Typical values are for reference only and are not tested in production.
2. The ADC supply current depends on the ADC conversion clock speed, conversion rate and power mode. Typical value show is at 6 MHz, 24 MHz, and 48 MHz. For lowest power operation, PWRSEL should be set to 00.
3. Must meet minimum TSMP requirement.
4. Maximum conversion rate for high-speed mode is with F_{ADCK} = 48 MHz. Maximum conversion rate for low-power mode is F_{ADCK} = 24 MHz and 7.5 sample cycles (to meet the minimum auto-zero time requirement).
5. Required sample time is dictated by external components R_{AS}, C_{AS}, internal components R_{ADIN}, C_{ADIN}, C_P, and desired sample accuracy in bits. Calculated it with formula: T_{SMP_REQ} = B*IN(2)*[R_{AS}*(C_{AS}*C_P) + (R_{AS} + R_{ADIN})*C_{ADIN}(typ)]. Required auto-zero time is for ADC comparator offset cancellation. The chosen sample time should be no less than maximum of the two: T_{SMP} = max(T_{SMP_REQ}, T_{AZ_REQ}).
6. Internal channel inputs are those that do not come from external source (temperature sensor, bandgap).
7. 1 LSB = (V_{REFH} - V_{REFL})/2^N (N=14 bits), for 16-bit specifications, multiply by 4.
8. All accuracy numbers assume the ADC is calibrated with V_{REFH}=V_{DD_ANA} and using a high-speed dedicated input channel.
9. Dynamic results assume F_{in} = 1 kHz sinewave, AVGS = 0 for 2 MS/s, AVGS = 4 for 0.5 MS/s.
10. Dynamic results assume F_{in} = 1 kHz sinewave, no averaging.
11. Set the power up delay (PUDLY) according to the ADC start-up time if PWREN=0.
12. I_{lkg} = leakage current (Refer to pin leakage specification in the packaged device's voltage and current operating ratings).
13. The temperature sensor can be calibrated to a ± 0.5% precision after board assembly by using a 3 temperature calibration flow with accurate ± 0.15 % temperature chamber.

3.5.2 CMP and 8-bit DAC electrical specifications

Table 50. Comparator and 8-bit DAC electrical specifications

Symbol	Description	Min.	Typ.	Max.	Unit	Notes

DNL	8-bit DAC differential non-linearity	—1.0	—	+1.0	LSB	5
	• Low/High power mode, power > 1.71 V	—	—	—	—	

- For devices that do not have a dedicated VSS_ANA pin, VSS_ANA is tied to VSS internally.
- Typical hysteresis is measured with input voltage range limited to 0.6 to VDD_ANA–0.6 V.
- Overdrive does not include input offset voltage or hysteresis.
- Comparator initialization delay is defined as the time between software writes to change control inputs (Writes to CMP_DACCR[DACEN], CMP_DACCR[VRSEL], CMP_DACCR[VOSEL], CMP_MUXCR[PSEL], and CMP_MUXCR[MSEL]), and the comparator output settling to a stable level.
- 1 LSB = $V_{reference}/256$.

Typical hysteresis

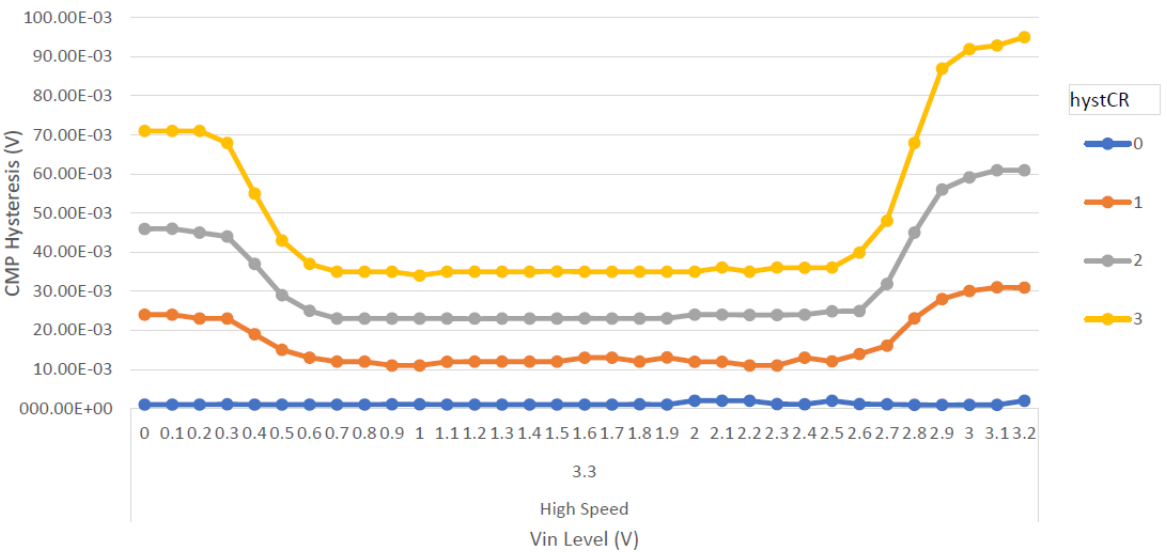

Figure 13. Typical hysteresis vs. Vin level (VDD = 3.3 V, HPMD = 1)

Figure 14. Typical hysteresis vs. Vin level (VDD = 3.3 V, HPMD = 0, NPMD = 0)

Figure 15. Typical hysteresis vs. Vin level (VDD = 3.3 V, HPMD = 0, NPMD = 1)

3.5.3 Voltage reference electrical specifications

Table 51. VREF operating requirements

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
VDD_ANA	Supply voltage	1.71	3.0	3.6	V	
C _L	Output load capacitance	130	220	470	nF	1

1. C_L must be connected to VREFO if the VREFO functionality is being used for either an internal or external reference.

Table 52. VREF operating behaviors

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
1.0 V low-power reference voltage						
V _{vrefo_lpb}	Voltage reference output 1.0 V - LP bandgap	1.0	—	1.1	V	1
I _{q_lpb}	Quiescent current - LP bandgap	—	16	—	μA	
I _{out_lpb}	Output current - LP bandgap	—	10	—	μA	
t _{st_lpb}	Start-up time - LP bandgap	—	6	20	μs	
ΔV/ V _{vrefo_lpb}	Voltage variation - LP bandgap	—	±5	—	%	
High precision reference voltage

I _q	Quiescent current	—	750	—	μA	

Table continues on the next page...

Table 52. VREF operating behaviors (continued)

Symbol	Description	Min.	Typ.	Max.	Unit	Notes
I_{out}	Output current	± 1	—	—	mA	
t_{st_lpbg}	Start-up time	—	—	400	μs	
ΔV_{LOAD}	Load regulation	—	100	200	$\mu V/mA$	3
V_{acc}	Absolute voltage accuracy (room temp)	—	± 1.5	± 6.5	mV	
V_{dev}	Voltage deviation over temperature	—	15	—	ppm/ $^{\circ}C$	

1. See the chip's Reference Manual for the appropriate settings of the VREF Status and Control register.
2. V_{vref0} max is also $\leq VDD_ANA - 600$ mV.
3. Load regulation voltage is the difference between the VREF0 voltage with no load vs. voltage with defined load.

3.6 Timers

See [General switching specifications](#).

3.7 Communication interfaces

3.7.1 LPUART

See [General switching specifications](#).

3.7.2 LPSPI switching specifications

The Low Power Serial Peripheral Interface (LPSPI) provides a synchronous serial bus with master and slave operations. Many of the transfer attributes are programmable. The following tables provide timing characteristics for classic SPI timing modes.

Table 53. LPSPI master mode timing

Symbol	Description	Min.	Max.	Unit	Notes
LP1	Frequency of operation <ul style="list-style-type: none"> • LPSPI0 • LPSPI1 	—	12	MHz	1
		—	24	MHz	
LP2	SPSCK period	$2 \times t_{periph}$	$2048 \times t_{periph}$	ns	2
LP3	Enable lead time	1/2	—	t_{periph}	2
LP4	Enable lag time	1/2	—	t_{periph}	2
LP5	Clock (SPSCK) high or low time	$t_{SPSCK}/2 - 3$	$t_{SPSCK}/2$	ns	—
LP6	Data setup time (inputs)	8	—	ns	—
LP7	Data hold time (inputs)	0	—	ns	—
LP8	Data valid (after SPSCK edge)	—	6	ns	—
LP9	Data hold time (outputs)	2	—	ns	—

1. The frequency of operation is also limited to a minimum of $f_{periph}/2048$ and a max of $f_{periph}/2$, where f_{periph} is the LPSPI peripheral functional clock.
2. $t_{periph} = 1/f_{periph}$.

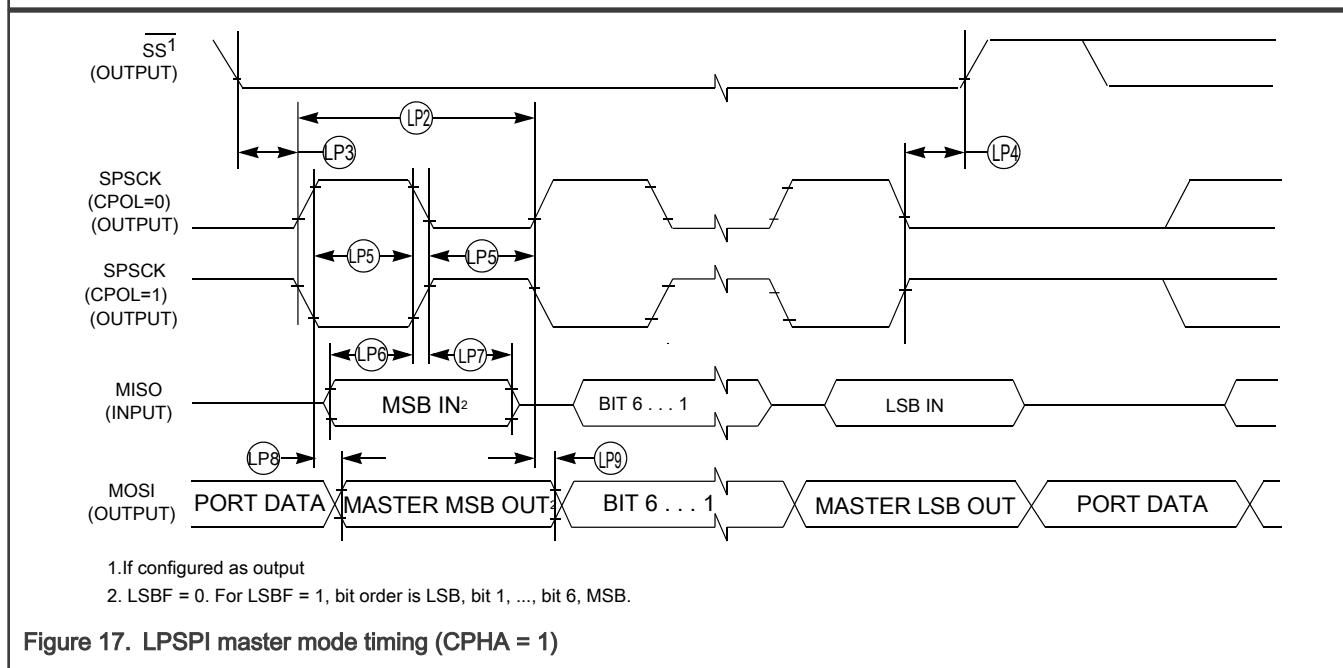

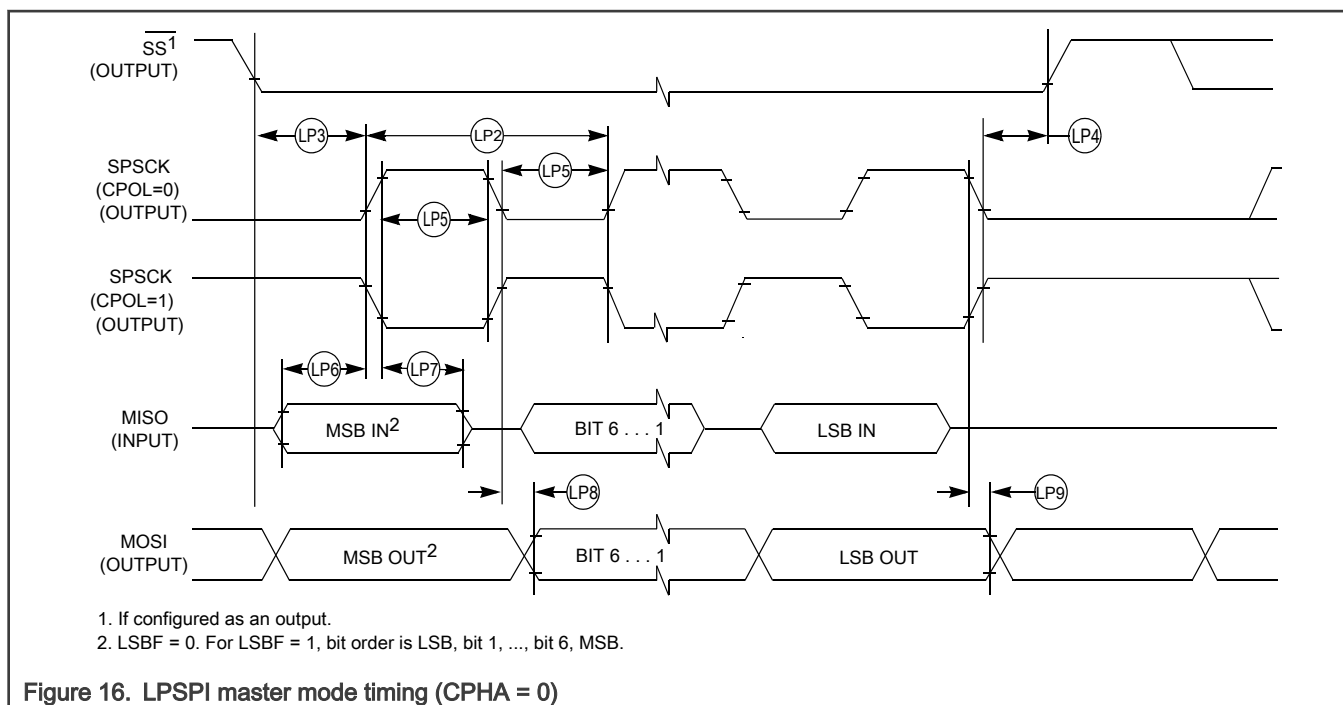

Table 54. LPSPi slave mode timing

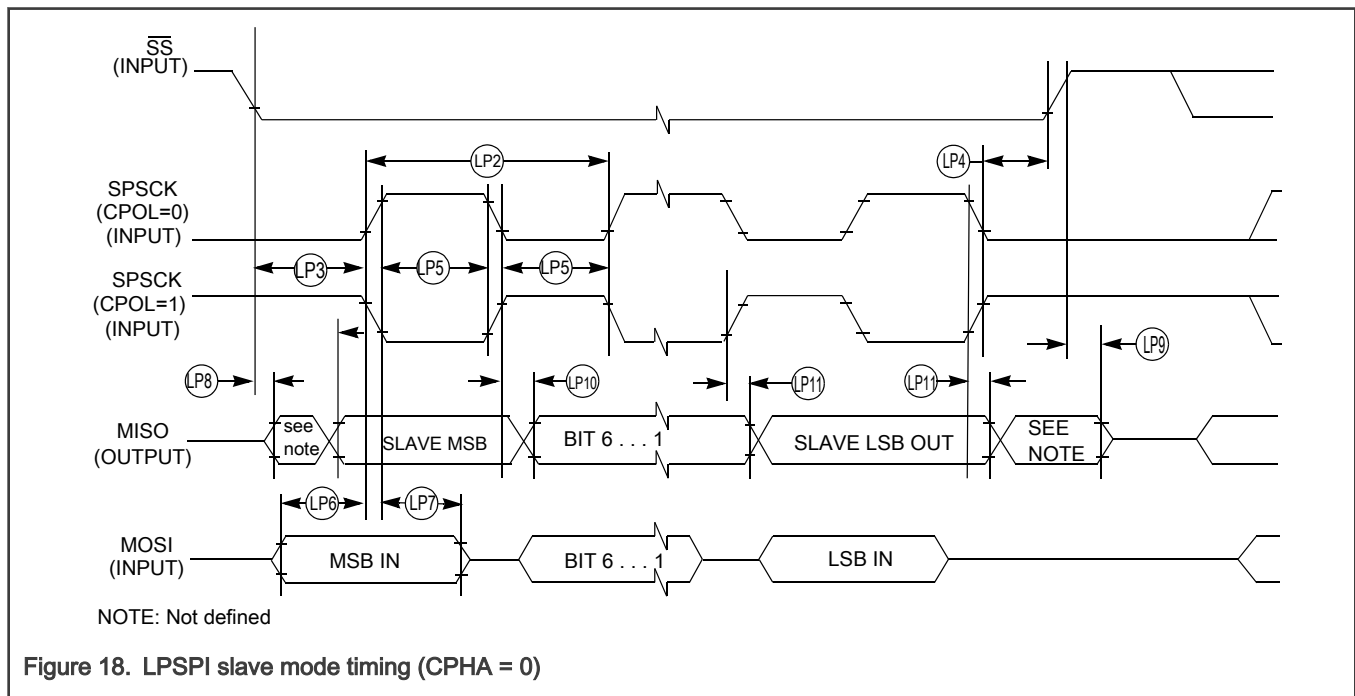

Symbol	Description	Min.	Max.	Unit	Notes
LP1	Frequency of operation • LPSPi0-LPSPi1	—	12	MHz	¹
LP2	SPSCk period	4 x t_{periph}	2048 x t_{periph}	ns	²

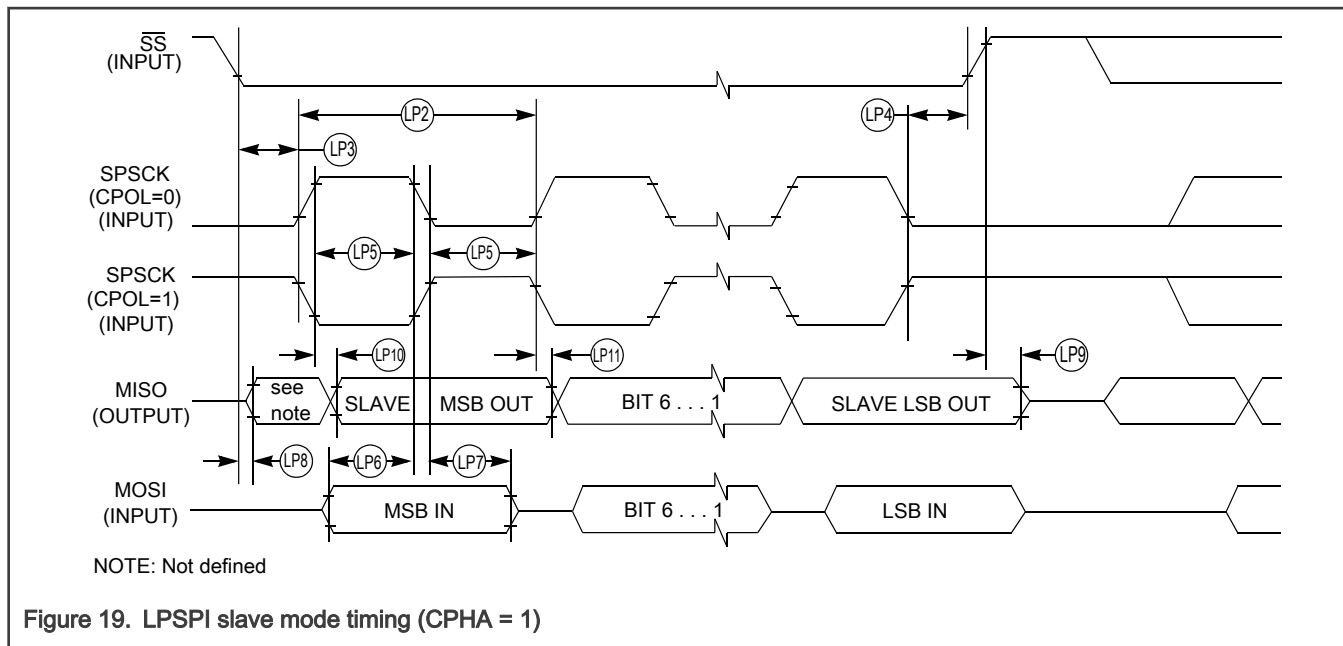

Table continues on the next page...

Table 54. LPSPi slave mode timing (continued)

Symbol	Description	Min.	Max.	Unit	Notes
LP3	Enable lead time	1	—	t_{periph}	2
LP4	Enable lag time	1	—	t_{periph}	2
LP5	Clock (SPSCK) high or low time	$t_{\text{SPSCK}}/2 - 5$	$t_{\text{SPSCK}}/2$	ns	—
LP6	Data setup time (inputs)	8	—	ns	—
LP7	Data hold time (inputs)	1	—	ns	—
LP8	Slave access time	—	t_{periph}	ns	2,3
LP9	Slave MISO disable time	—	t_{periph}	ns	2,4
LP10	Data valid (after SPSCK edge)	—	28	ns	—
LP11	Data hold time (outputs)	1	—	ns	—

1. The frequency of operation is also limited to a minimum of $f_{\text{periph}}/2048$ and a max of $f_{\text{periph}}/4$, where f_{periph} is the LPSPi peripheral functional clock.
2. $t_{\text{periph}} = 1/f_{\text{periph}}$.
3. Time to data active from high-impedance stat.
4. Hold time to high-impedance state.

3.7.3 Inter-Integrated Circuit Interface (I²C) specifications

Table 55. I²C timing

Characteristic	Symbol	Standard Mode		Fast Mode		Unit
		Min.	Max.	Min.	Max.	
SCL Clock Frequency	f_{SCL}	0	100	0	400	kHz
Hold time (repeated) START condition. After this period, the first clock pulse is generated.	$t_{HD}; STA$	4	—	0.6	—	μs
LOW period of the SCL clock	t_{LOW}	4.7	—	1.25	—	μs
HIGH period of the SCL clock	t_{HIGH}	4	—	0.6	—	μs
Set-up time for a repeated START condition	$t_{SU}; STA$	4.7	—	0.6	—	μs
Data hold time for I ² C bus devices	$t_{HD}; DAT$	0 ^{1,2}	3.45 ³	0 ^{4,2}	0.9 ¹	μs
Data set-up time	$t_{SU}; DAT$	250 ⁵	—	100 ^{3,6}	—	ns
Rise time of SDA and SCL signals	t_r	—	1000	$20 + 0.1C_b$ ⁷	300	ns
Fall time of SDA and SCL signals	t_f	—	300	$20 + 0.1C_b$ ⁶	300	ns
Set-up time for STOP condition	$t_{SU}; STO$	4	—	0.6	—	μs
Bus free time between STOP and START condition	t_{BUF}	4.7	—	1.3	—	μs
Pulse width of spikes that must be suppressed by the input filter	t_{SP}	N/A	N/A	0	50	ns

1. The master mode I²C deasserts ACK of an address byte simultaneously with the falling edge of SCL. If no slaves acknowledge this address byte, then a negative hold time can result, depending on the edge rates of the SDA and SCL lines.

2. A device must internally provide a hold time of at least 300 ns for the SDA signal (with respect to the $V_{IH}(\min)$ of the SCL signal) to bridge the undefined region of the falling edge of SCL.
3. The maximum $t_{HD; DAT}$ must be met only if the device does not stretch the LOW period (t_{LOW}) of the SCL signal.
4. Input signal Slew = 10 ns and Output Load = 50 pF
5. Set-up time in slave-transmitter mode is 1 IPBus clock period, if the TX FIFO is empty.
6. A Fast mode I²C bus device can be used in a Standard mode I²C bus system, but the requirement $t_{SU; DAT} \geq 250$ ns must then be met. This is automatically the case if the device does not stretch the LOW period of the SCL signal. If such a device does stretch the LOW period of the SCL signal, then it must output the next data bit to the SDA line $t_{rmax} + t_{SU; DAT} = 1000 + 250 = 1250$ ns (according to the Standard mode I²C bus specification) before the SCL line is released.
7. C_b = total capacitance of the one bus line in pF.

Table 56. I²C 1 Mbps timing

Characteristic	Symbol	Min.	Max.	Unit
SCL Clock Frequency	f_{SCL}	0	1	MHz
Hold time (repeated) START condition. After this period, the first clock pulse is generated.	$t_{HD; STA}$	0.26	—	μs
LOW period of the SCL clock	t_{LOW}	0.5	—	μs
HIGH period of the SCL clock	t_{HIGH}	0.26	—	μs
Set-up time for a repeated START condition	$t_{SU; STA}$	0.26	—	μs
Data hold time for I ² C bus devices	$t_{HD; DAT}$	0	—	μs
Data set-up time	$t_{SU; DAT}$	50	—	ns
Rise time of SDA and SCL signals	t_r	$20 + 0.1C_b$ ¹	120	ns
Fall time of SDA and SCL signals	t_f	$20 + 0.1C_b$ ¹	120	ns
Set-up time for STOP condition	$t_{SU; STO}$	0.26	—	μs
Bus free time between STOP and START condition	t_{BUF}	0.5	—	μs
Pulse width of spikes that must be suppressed by the input filter	t_{SP}	0	50	ns

1. C_b = total capacitance of the one bus line in pF. The max C_b value is 50 pF.

Table 57. I²C HS mode timing¹

Parameter	Symbol	Min	Max	Units
SCL Clock Frequency	f_{SCL}	0	3.4	MHz
Hold time (repeated) START condition. After this period, the first clock pulse is generated.	$t_{HD; STA}$	0.26	—	μs
LOW period of the SCL clock	t_{LOW}	0.5	—	μs
High period of the SCL clock	t_{HIGH}	0.26	—	μs
Set-up time for a repeated START condition	$t_{SU; STA}$	0.26	—	μs
Data hold time for I ² C bus devices	$t_{HD; DAT}$	0 ²	—	μs
Data setup time	$t_{SU; DAT}$	34	—	ns
Rise time of SDA and SCL signals	t_r	$20 + 0.1C_b$ ³	120	ns

Table continues on the next page...

Table 57. I2C HS mode timing¹ (continued)

Fall time of SDA and SCL signals	t_f	$20 + 0.1C_b^3$	120	ns
Setup time for STOP condition	$t_{SU; STO}$	0.26	—	μs
Bus free time between STOP and START condition	t_{BUF}	0.5	—	μs
Pulse width of spikes that must be suppressed by the input filter	t_{SP}	0	50	ns

1. Only PTB4/5, PTA18/19, PTC0/1, PTC4/5 pin can support Fast+ (3 MHz) mode.
2. A device must internally provide a data hold time to bridge the undefined part between V_{IH} and V_{IL} of the falling edge of the SCLH signal. An input circuit with a threshold as low as possible for the falling edge of the SCLH signal minimizes this hold time.
3. C_b = total capacitance of the one bus line in pF. The max C_b value is 50 pF.

**Figure 20. Timing definition for devices on the I2C bus**

3.7.4 Improved Inter-Integrated Circuit Interface (MIPI-I3C) specifications

Unless otherwise specified, MIPI-I3C specifications are timed to/from the V_{IH} and/or V_{IL} signal points.

Table 58. MIPI-I3C specifications when communicating with legacy I2C devices

Symbol	Characteristic	400 kHz/Fast mode		1 MHz/ Fast+ mode		Unit
		Min.	Max.	Min.	Max.	
f_{SCL}	SCL Clock Frequency	0	0.4	0	1.0	MHz
t_{SU_STA}	Set-up time for a repeated START condition	600	—	260	—	ns
t_{HD_STA}	Hold time (repeated START condition)	600	—	260	—	ns
t_{LOW}	LOW period of the SCL clock	1300	—	500	—	ns
t_{HIGH}	HIGH period of the SCL clock	600	—	260	—	ns
t_{SU_DAT}	Data set-up time	100	—	50	—	ns
t_{HD_DAT}	Data hold time for I2C bus devices	0	—	0	—	ns
t_f	Fall time of SDA and SCL signals	$20 + 0.1C_b^1$	300	$20 + 0.1C_b^1$	120	ns
t_r	Rise time of SDA and SCL signals	$20 + 0.1C_b^1$	300	$20 + 0.1C_b^1$	120	ns
t_{SU_STO}	Set-up time for STOP condition	600	—	260	—	ns

Table continues on the next page...

Table 58. MIPI-I3C specifications when communicating with legacy I²C devices (continued)

Symbol	Characteristic	400 kHz/Fast mode		1 MHz/ Fast+ mode		Unit
		Min.	Max.	Min.	Max.	
t _{BUF}	Bus free time between STOP and START condition	1.3	—	0.5	—	μs
t _{SP}	Pulse width of spikes that must be suppressed by the input filter	0	50	0	50	ns

1. C_b = total capacitance of the one bus line in pF.

Table 59. MIPI-I3C open drain mode specifications

Symbol	Characteristic	Min.	Max.	Unit	Notes
t _{LOW_OD}	LOW period of the SCL clock	200	—	ns	
t _{DIG_OD_L}		t _{LOW_OD} + t _{rDA_OD} (min)	—	ns	
t _{HIGH}	HIGH period of the SCL clock	t _{CF}	12	ns	
t _{rDA_OD}	Fall time of SDA signal	20 + 0.1C _b	120	ns	1
t _{SU_OD}	Data set-up time during open drain mode	3	—	ns	
t _{CAS}	Clock after START (S) Condition	38.4 n	1 μ	s	
		38.4 n	100 μ	s	
		38.4 n	2 m	s	
		38.4 n	50 m	s	
t _{CBP}	Clock before STOP (P) condition	t _{CAS} (min)/2	—	ns	
t _{MMOverlap}	Current master to secondary master overlap time during handoff	t _{DIG_OD_L}	—	ns	
t _{AVAIL}	Bus available condition	1	—	μs	
t _{IDLE}	Bus idle condition	1	—	ms	
t _{MMLock}	Time interval where new master not driving SDA low	t _{AVAIL}	—	μs	

1. C_b = total capacitance of the one bus line in pF.

Table 60. MIPI-I3C push-pull specifications for SDR and HDR-DDR modes

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
f _{SCL}	SCL Clock Frequency	0.01	—	12.5	MHz	
t _{LOW}	LOW period of the SCL clock	24	—	—	ns	
t _{DIG_L}		32	—	—	ns	
t _{HIGH_MIXE D}	HIGH period of the SCL clock for a mixed bus	24	—	—	ns	

Table continues on the next page...

Table 60. MIPI-I3C push-pull specifications for SDR and HDR-DDR modes (continued)

Symbol	Characteristic	Min.	Typ.	Max.	Unit	Notes
$t_{DIG_H_MIXED}$		32	—	45	ns	1
t_{HIGH}	HIGH period of the SCL clock	24	—	—	ns	
t_{DIG_H}		32	—	—	ns	
t_{SCO}	Clock in to data out for slave					
	Load capacitance = 50 pF	—	—	38	ns	
	Load capacitance = 25 pF	—	—	36	ns	
	Load capacitance = 15 pF	—	—	35	ns	
	Load capacitance = 1 pF	—	—	33	ns	
t_{CR}	SCL clock rise time	—	—	$150 \times 1/f_{SCL}$ (capped at 60)	ns	
t_{CF}	SCL clock fall time	—	—	$150 \times 1/f_{SCL}$ (capped at 60)	ns	
t_{HD_PP}	SDA signal data hold <ul style="list-style-type: none"> Master mode Slave mode 	$t_{CR} + 3$ and $t_{CF} + 3$ 0	— —	— —	ns	
t_{SU_PP}	SDA signal setup	3	—	—	ns	
t_{CASr}	Clock after repeated START (Sr)	t_{CAS} (min)	—	—	ns	
t_{CBSr}	Clock before repeated START (Sr)	t_{CAS} (min)/2	—	—	ns	
C_b	Capacitive load per bus line	—	—	50	pF	

- When communicating with an I3C Device on a mixed Bus, the $t_{DIG_H_MIXED}$ period must be constrained in order to make sure that I²C devices do not interpret I3C signaling as valid I²C signaling.

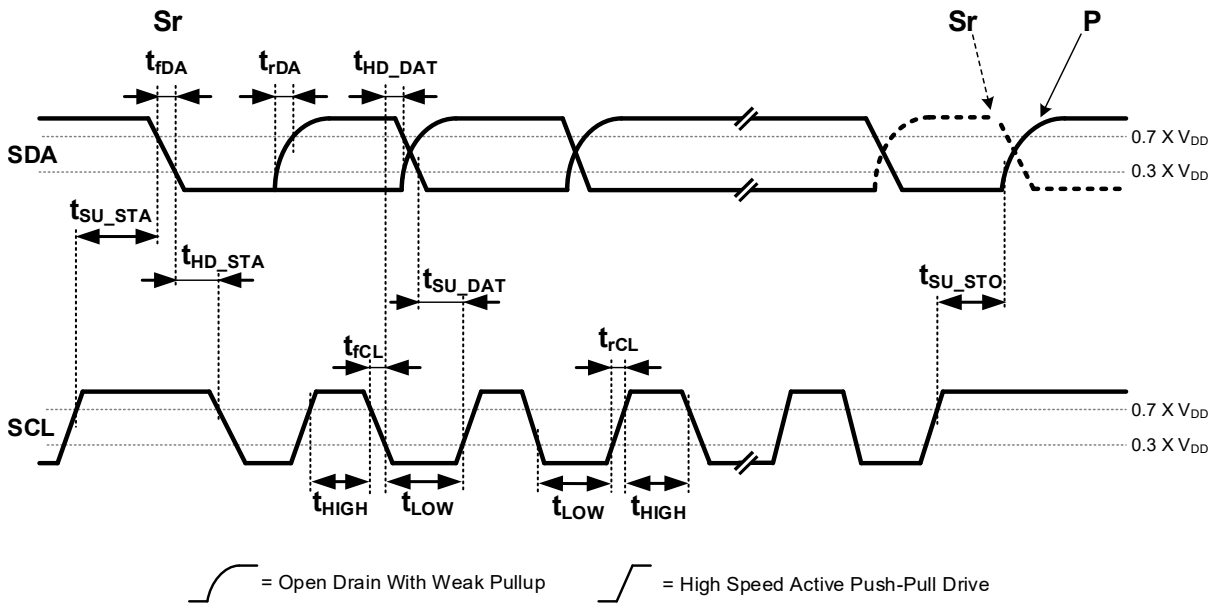

Figure 21. I3C legacy mode timing

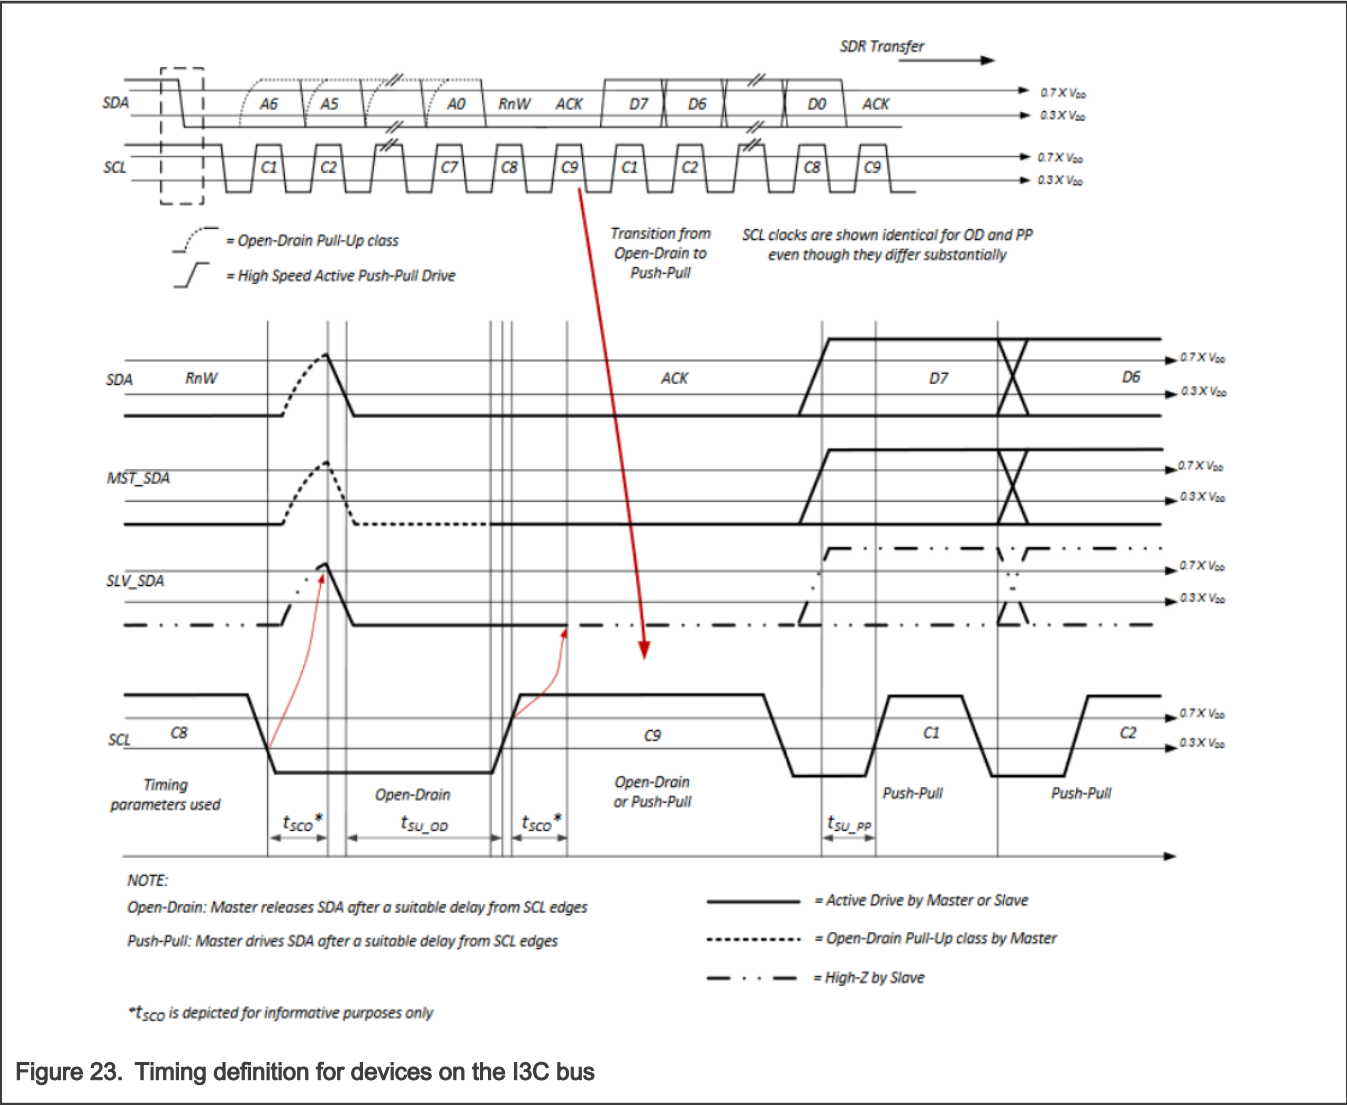

Figure 22. t_{DIG_H} and t_{DIG_L}

3.7.5 CAN switching specifications

See [General switching specifications](#).

3.8 Human Machine Interface (HMI) modules

3.8.1 General Purpose Input/Output (GPIO)

See [General switching specifications](#).

3.8.2 Flexible IO controller (FlexIO)

Table 61. FlexIO Timing Specifications

Symbol	Description	Min	Typ	Max	Unit	Notes
t_{ODS}	Output delay skew between any two FlexIO_Dx pins configured as outputs that toggle on same internal clock cycle	0	—	10	ns	¹

Table continues on the next page...

Table 61. FlexIO Timing Specifications (continued)

Symbol	Description	Min	Typ	Max	Unit	Notes
t_{IDS}	Input delay skew between any two FlexIO_Dx pins configured as inputs that are sampled on the same internal clock cycle	0	—	10	ns	¹

1. Assumes pins muxed on same VDD_IO domain with same load

4 Package dimensions

4.1 Obtaining package dimensions

Package dimensions are provided in package drawings.

To find a package drawing, go to nxp.com and perform a keyword search for the drawing's document number:

If you want the drawing for this package	Then use this document number
40-pin HVQFN	SOT618-13(DD)
48-pin QFN	SOT619-17(D)

1. This signal is not available for the parts without Radio modules.
2. VREF shorts to VSS.
3. For the parts that have no radio modules, this pin is not connected.
4. This signal is not available for the parts without CAN module.
5. PTC6_WUU0_P11 pin signal available only as a wake up source for FlexCAN module on signal CAN0_RX from pin PTC5. Other configuration on PTC6 shall not be used.

5.2 Recommended connection for unused analog and digital pins

Table 62 shows the recommended connections for pins if those pins are not used in the customer's application

Table 62. Recommended connection for unused interfaces

Pin Type	Pin Function	Recommendation	Comments
Power	VDD_LDO_CORE	Connect to VOUT_CORE and VSS	When the LDO is not used, the input and output should be connected together and tied to ground through a 10 kΩ resistor. The regulator should also be disabled in software.
Power	VOUT_CORE	Connect to VDD_LDO_CORE and VSS	When the LDO is not used, the input and output should be connected together and tied to ground through a 10 kΩ resistor. The regulator should also be disabled in software.
Power	VOUT_SYS	Connect to VDD_IO_D	When the LDO is bypassed, the input and output should be connected together and tied to an external supply that shall not exceed the maximum input voltage for VDD_SYS. The regulator should also be disabled in software.
Power	VDD_DCDC	Ground	When the DCDC is not used, the input should be tied to VSS through a 10 kΩ resistor.
Power	DCDC_LX	Float	
Power	VDD_IO_D	Must be powered	VDD_IO_D is used to power parts of the system power controller (SPC) and must be powered to use the chip. If LDO_SYS is not being used, then tie VDD_IO_D to VOUT_SYS and supply power from an external source. The regulator should also be disabled in software.
Power	VDD_SWITCH	Must be powered	Powers FRO16 and a portion of RAM.
Power	VOUT_SWITCH	Float	
Power	VDD_IO_ABC	Must be powered	VDD_IO_ABC powers the mux logic for PORTA, PORTB and PORTC. It must be powered during POR. The recommendation is to keep it powered, but it can be connected to the output of the Smart Power Switch and be left floating in shelf storage mode.
Power	VPA_2P4GHz	Float	
Power	VDD_ANA	Float	
Power	VREFH	Always connect to VDD_ANA potential	Always connect to VDD_ANA potential
Power	VREFL	Always connect to VSS potential	Always connect to VSS potential
Power	VSS_ANA	Always connect to VSS potential	Always connect to VSS potential
Power	VREFO	220 nF capacitor	220 nF capacitor if VREF is used otherwise Float
Power	VSS_DCDC	Always connect to VSS potential	Always connect to VSS potential

Table continues on the next page...

Table 62. Recommended connection for unused interfaces (continued)

Pin Type	Pin Function	Recommendation	Comments
Power	VSS_RF	Always connect to VSS potential	Always connect to VSS potential
Analog/non-GPIO	ADC _n _x	Float	
Analog/non-GPIO	VREFO	Float	Analog output - Float
Analog/non-GPIO	TAMPERx	Float	
Analog/non-GPIO	RTC_WAKEUP_B	Float	
Analog/non-GPIO	RTC_RTCCLKOUT	Float	
Analog/non-GPIO	EXTAL32K	Float	
Analog/non-GPIO	XTAL32K	Float	Analog output - Float
Analog/non-GPIO	EXTAL_32M	Float	
Analog/non-GPIO	XTAL_32M	Float	Analog output - Float
GPIO/Analog	PTx/CMP _n _INx	Float	Float (default is analog input)
GPIO/Digital	PTD1/NMI_b	10kΩ pullup or disable and float	Pull high or disable in PCR & FOPT and float
GPIO/Digital	PTx	Float	Float (default is disabled)
Digital/non-GPIO	SWITCH_WAKEUP_B	Float	Enable internal pull-up

5.3 Pinouts diagram

The below figure shows the pinout diagram for the devices supported by this document. Many signals may be multiplexed onto a single pin. To determine what signals can be used on which pin, see the previous section.

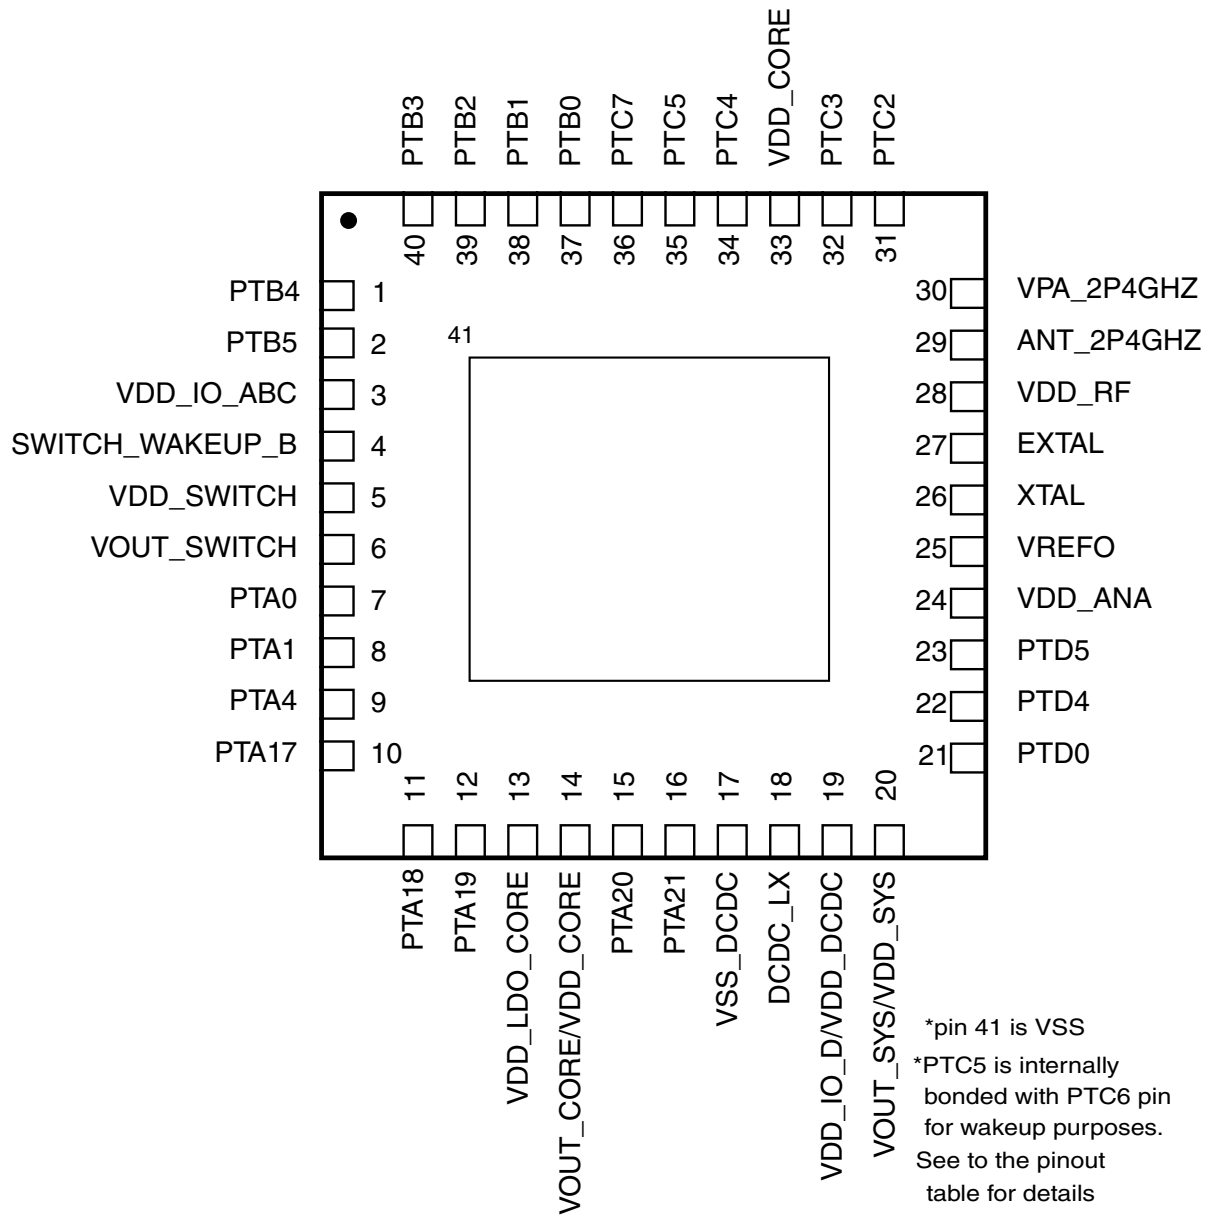

Figure 24. 48-pin HVQFN package pinout diagram

6 Ordering parts

6.1 Determining valid orderable parts

Valid orderable part numbers are provided on the web. To determine the orderable part numbers for this device, go to nxp.com and perform a part number search for the following device numbers: KW45

7 Part identification

Part numbers for the device have fields that identify the specific part. Use the values of these fields to determine the specific part.

7.1 Part number format

Part numbers for this device have the following format:

B R PF R FS SF T PG SR PT

Table 63. Part number fields descriptions

Field	Description	Values
B	Brand	<ul style="list-style-type: none"> • KW45
R	Radio	<ul style="list-style-type: none"> • B = Bluetooth LE • Z = No Radio
PF	Product Family	<ul style="list-style-type: none"> • 41
R	Radio	<ul style="list-style-type: none"> • Z = Upgradable • 0 = Not Applicable (No Radio)
FS	Flash Size	<ul style="list-style-type: none"> • 5 = 512 KB • 8 = 1 MB
SF	Sub Feature	<ul style="list-style-type: none"> • 2 = Secure Enclave • 3 = Secure Enclave and CAN
T	Temperature	<ul style="list-style-type: none"> • A = Automotive, -40 °C to +105 °C (Ta), -40 °C to +125 °C (Tj)
PG	Package	<ul style="list-style-type: none"> • FP = 40 HVQFN "Wettable", 6 mm x 6 mm, 0.5p • FT = 48 HVQFN "Wettable", 7 mm x 7 mm, 0.5p
SR	Silicon Revision	<ul style="list-style-type: none"> • A = Initial Mask Set • B = Production Release Mask Set
PT	Packaging Type	<ul style="list-style-type: none"> • R = Tape and Reel • T = Tray

7.2 Example

This is an example part number:

KW45B41Z82AFTBT

7.3 Package marking

Package marking for this device have the following format:

B R PF R FS SF T PG

Table 64. Package marking

Field	Description	Values
B	Brand	<ul style="list-style-type: none"> • KW45
R	Radio	<ul style="list-style-type: none"> • B = Bluetooth LE • Z = No Radio
PF	Product Family	<ul style="list-style-type: none"> • 41
R	Radio	<ul style="list-style-type: none"> • Z = Upgradable • 0 = Not Applicable (No Radio)
FS	Flash Size	<ul style="list-style-type: none"> • 5 = 512 KB • 8 = 1MB
SF	Sub Feature	<ul style="list-style-type: none"> • 2 = Secure Enclave • 3 = Secure Enclave and CAN
T	Temperature	<ul style="list-style-type: none"> • A = Automotive, -40 °C to +105 °C (Ta), -40 °C to +125 °C (Tj)
PG	Package	<ul style="list-style-type: none"> • FP = 40 HVQFN "Wettable", 6 mm x 6 mm, 0.5p • FT = 48 HVQFN "Wettable", 7 mm x 7 mm, 0.5p

7.3.1 Package marking information

The KW45 package has the following top-side marking:

- First line: aaaaaaa
- Second line: aaaaaa
- Third line: mmmmm
- Fourth line: xxxyywxx

Table 65. Package marking

Identifier	Description
a	Reduced part number code, refer to Package marking table
m	Mask set
y	Year
w	Work week
x	NXP internal use

8 Terminology and guidelines

8.1 Definitions

Key terms are defined in the following table:

Term	Definition
Rating	<p>A minimum or maximum value of a technical characteristic that, if exceeded, may cause permanent chip failure:</p> <ul style="list-style-type: none"> • <i>Operating ratings</i> apply during operation of the chip. • <i>Handling ratings</i> apply when the chip is not powered. <p style="text-align: center;">NOTE</p> <p>The likelihood of permanent chip failure increases rapidly as soon as a characteristic begins to exceed one of its operating ratings.</p>
Operating requirement	A specified value or range of values for a technical characteristic that you must guarantee during operation to avoid incorrect operation and possibly decreasing the useful life of the chip
Operating behavior	A specified value or range of values for a technical characteristic that are guaranteed during operation if you meet the operating requirements and any other specified conditions
Typical value	<p>A specified value for a technical characteristic that:</p> <ul style="list-style-type: none"> • Lies within the range of values specified by the operating behavior • Is representative of that characteristic during operation when you meet the typical-value conditions or other specified conditions <p style="text-align: center;">NOTE</p> <p>Typical values are provided as design guidelines and are neither tested nor guaranteed.</p>

8.2 Examples

Operating rating:

Symbol	Description	Min.	Max.	Unit
V _{DD}	1.0 V core supply voltage	-0.3	1.2	V

Operating requirement:

Symbol	Description	Min.	Max.	Unit
V _{DD}	1.0 V core supply voltage	0.9	1.1	V

Operating behavior that includes a typical value:

Symbol	Description	Min.	Typ.	Max.	Unit
I _{WP}	Digital I/O weak pullup/pulldown current	10	70	130	μA

8.3 Typical-value conditions

Typical values assume you meet the following conditions (or other conditions as specified):

Symbol	Description	Value	Unit
T _A	Ambient temperature	25	°C
V _{DD}	Supply voltage	3.3	V

8.4 Relationship between ratings and operating requirements

8.5 Guidelines for ratings and operating requirements

Follow these guidelines for ratings and operating requirements:

- Never exceed any of the chip's ratings.
- During normal operation, don't exceed any of the chip's operating requirements.
- If you must exceed an operating requirement at times other than during normal operation (for example, during power sequencing), limit the duration as much as possible.

9 Abbreviations and Acronyms

The following table provides the list of abbreviations and acronyms their definitions.

Table 66. Abbreviations and Acronyms and their definition

Abbreviations and Acronyms	Definitions
ADC	Analog-to-Digital Converter
AXBS	Crossbar Switch
CMC	Core Mode Controller

MPU	Memory Protection Unit
MRCC	Module Reset and Clock Control
MSCM	Miscellaneous System Control Module
MU	Messaging Unit
NBU	Narrowband Unit
NPX	FMC with NVM PRINCE Encryption and Decryption
NVIC	Nested Vectored Interrupt Controller
NVM	Non-Volatile Memory
OSC	Oscillator
RFMC	Radio Mode Controller
RTC	Real Time Clock
SEMA42	Semaphore Module
SCG	System Clock Generator

Table continues on the next page...

Table 66. Abbreviations and Acronyms and their definition (continued)

Abbreviations and Acronyms	Definitions
SFA	Signal Frequency Analyzer
SMSCM	Secure Miscellaneous System Control Module
SPC	System Power Controller
SWD	Serial Wire Debug
TPIU	Trace Port Interface Unit
TPM	Timer/PWM Module
TRDC	Trusted Resource Domain Controller
TRNG	True Random Number Generator
TRGMUX	Trigger Multiplexer
TSTMR	Time Stamp Timer
VREF	Voltage Reference
WDOG	Watchdog
WUU	Wake-Up Unit

10 Revision history

The following table provides a revision history for this document.

Table 67. Revision History

Rev. No.	Date	Substantial Changes
0	June 2020	Initial internal release
1	September 2020	<ul style="list-style-type: none"> Editorial updates in the front matter Updated the partnumber from K32W to KW45 all over the document Added Device Mask Set Number in Device Revision Number table Added the package drawing resource in Related Resource Table Removed V_{RAM} and VDD_IO_X- VDD_ANA from Voltage and current operating requirements Updated Power consumption operating behaviors table Updated the description of Δf_{fro6m} in FRO-6M specifications table and Δf_{fro32k} in FRO-32K specifications table Updated I_{fro16k} and added I_{por} in Free-running oscillator FRO-16K specifications Updated the maximum values in Flash timing specifications Updated Receiver Specifications with Generic FSK Modulations table Updated Part number format Updated LDO_CORE electrical specifications

Table continues on the next page...

Table 67. Revision History (continued)

Rev. No.	Date	Substantial Changes
		<ul style="list-style-type: none"> Updated VDD_IO_D in LDO_SYS electrical specifications Updated Smart power switch Updated Receiver Feature Summary Added Package marking section Added Power Sequence table
2	November 2020	<ul style="list-style-type: none"> Editorial updates in the front matter Updated minimum voltage of DC/DC voltage range from 1.8 V to 1.71 V Added the names of Reference Manual and Chip errata in Related Resources Table Updated the K4W1 block diagram in front matter Removed I_{ICIO}, I_{ICcont}, V_{OPDU}, and V_{RFSYS} from Voltage and current operating requirements Removed V_{HVD_HYS_SYS} and V_{LVD_HYS_SYS} from VDD_SYS supply HVD and LVD Operating Ratings table in HVD, LVD, and POR operating requirements Removed I_{OHT}, R_{PU(I3C)}, R_{HPU}, R_{HPD}, and I_{OLT} from Voltage and current operating behaviors Updated Power Switch to Smart Power Switch Updated the values of Power mode transition operating behaviors Removed EMC radiated emissions operating behaviors section and Designing with radiated emissions in mind Updated the General switching specifications section Updated 16-bit ADC electrical characteristics section Updated LPI values from LPSPi master mode timing table and LP10 value from LPSPi slave mode timing Updated Timing definition for devices on the I3C bus diagram Updated Package marking and Package marking information Added pinout table and pinout diagram and removed excel sheet format
3	May 2021	<ul style="list-style-type: none"> Changed VREF_OUT to VREFO to make it aligned in the whole book. Updated the Timers section in front matter content Updated DCDC converter specifications Updated the t_{startup} and jit_{per} in Free-running oscillator FRO-192M specifications table Updated the t_{startup} in Free-running oscillator FRO-6M specifications Updated Free-running oscillator FRO-32K specifications Updated the Low power mode peripheral power consumption adders Updated Voltage and current maximum ratings

Table continues on the next page...

Table 67. Revision History (continued)

Rev. No.	Date	Substantial Changes
		<ul style="list-style-type: none"> Removed V_{RFSYS} and under-drive (0.9) Operation, updated note to the I_{CIO} in the Voltage and current operating requirements. Removed Target $VDD_{Core} = 0.9$ V from VDD_{CORE} supply HVD and LVD Operating Ratings table in HVD, LVD, and POR operating requirements Updated 32 MHz to 64 MHz in Power mode transition operating behaviors. Updated the Power Consumption Operating Behaviors Updated the Typical power-down mode RAM current adders Updated Thermal attributes. Added VPA_2P4GHz, VREFO and Digital/non-GPIO rows in Recommended connection for unused analog and digital pins. Updated CPU_CLK and slow clock frequency in Power mode transition operating behaviors Updated the values in General switching specifications Updated Transmit and PLL Feature Summary Updated Pinout Table Updated t_{SCO} in MIPI-I3C push-pull specifications for SDR and HDR-DDR modes table and added figures in Improved Inter-Integrated Circuit Interface (MIPI-I3C) specifications Updated the descriptions to the $VOUT_{SYS}$, I_{LOAD} and I_{DD} in the LDO_SYS electrical specifications Updated the comments to the DCDC_LX in the Recommended connection for unused analog and digital pins
4	September 2021	<ul style="list-style-type: none"> Editorial changes Updated the front matter content Updated the part numbers to add 'T' for Tray or 'R' for Reel in the end Updated ESD and Latch-Up Ratings Removed I_{DD} from Voltage and current maximum ratings Updated the Voltage and current operating requirements table Updated the typical value of $V_{LVDV_HYS_IO_ABC}$, $V_{HVD_HYS_SYS}$ and $V_{LVD_HYS_SYS}$ in HVD, LVD, and POR operating requirements Updated the typical values of VDD_{CORE} supply HVD and LVD Operating Ratings table Updated the EdgeLock Secure Enclave in KW45 block diagram Updated the description and values of VDD_{IO_D} in LDO_SYS electrical specifications Updated Voltage and current operating behaviors table Updated the description of I2C/I3C I/O pins in General switching specifications Updated the minimum value of V_{BAT} in Free-running oscillator FRO-16K specifications and added footnote

Table continues on the next page...

Table 67. Revision History (continued)

Rev. No.	Date	Substantial Changes
		<ul style="list-style-type: none"> Removed the bullet of 0 to 40 °C in Δf_{fro16K} in Free-running oscillator FRO-16K specifications Added four low voltage command times in Flash timing specifications table Added $t_{PORFAST}$ and updated t_{POR} in Power mode transition operating behaviors table Updated the values in Power mode transition operating behaviors table Added Typical hysteresis vs. Vin level (VDD = 3.3 V, HPMD = 1) chart, Typical hysteresis vs. Vin level (VDD = 3.3 V, HPMD = 0, NPMD = 1), and Typical hysteresis vs. Vin level (VDD = 3.3 V, HPMD = 0, NPMD = 0) in CMP and 8-bit DAC electrical specifications Updated Power Consumption Operating Behaviors table Updated maximum value of C_L in VREF operating requirements and VREF operating behaviors in Voltage reference electrical specifications Updated VDD_ANA symbol to VDD_IO_ABC and the maximum value of VREFH to VDD_IO_ABLC in CMP and 8-bit DAC electrical specifications Removed the references of NVM and added footnote for CAN in pinout table Pinout Table Updated Receiver Feature Summary and Transmit and PLL Feature Summary Removed the references of SUOX and SOX from 32 kHz oscillator electrical specifications
4.1	December 2021	<ul style="list-style-type: none"> Added parts Updated the Front matter content
5	December 2021	<ul style="list-style-type: none"> Editorial updates Removed the Note below package drawings Updated the Reel to Tape and Reel in Ordering Information table Added SIM_SDID value in Device Revision table Removed I_{ICont} parameter, updated the values of I_{ICIO}, and added another footnote to I_{ICIO} in Table 10 Updated the first footnote in Table 15 Updated the maximum value of I_{LOAD} at Normal drive mode in Table 16 Updated I_{LOAD} parameter in Table 17 Updated Table 21 Updated the values of Jit_{osc} and $v_{ec_extal32}$ in Table 32 Added typical values to all parameters in Table 40 Added new parameter VPA_2P4GHz in Table 41 Added footnotes in Table 42 Updated Table 43

Table continues on the next page...

Table 67. Revision History (continued)

Rev. No.	Date	Substantial Changes
		<ul style="list-style-type: none"> Updated the values of f_{ADCK} and R_{ADIN} in Table 48 Updated Table 49 Updated Table 50 Updated typical and maximum value of V_{acc} in Table 52 Added maximum value of f_{SCL} and minimum value of t_{SU_PP} in Table 60 Added Abbreviations and Acronyms Updated Table 44 Removed RF_UART signal from Pinout Table
6	September 2022	<ul style="list-style-type: none"> Updated the Front Matter Content content Updated Bluetooth Low Energy 5.2 to Bluetooth Low Energy 5.3 all over the datasheet Updated the minimum value and maximum value of V_{OUT_CORE} for low drive strength in LDO_CORE electrical specifications Updated the values of t_{P_WDN} and t_{DP_WDN} in Power mode transition operating behaviors Updated the values to TBD in Power Consumption Operating Behaviors and added IDD tables for phantoms: 512M + RF, 1M + non-RF and 512 + non-RF. Updated the ambient temperature range from 120 °C to 105 °C Removed the values for ambient temperature 120 °C all over the document Updated the range of Target V_{DD_CORE} in Table 12 Updated the values of V_{LVD_CORE} at Target $V_{DD_CORE} = 1.05$ in Table 12 Updated the values of V_{OUT_DCDC} in Table 15 Updated Table 24 to show only 25 °C Updated Typical power-down mode RAM current adders Added footnotes to Receiver Feature Summary and Transmit and PLL Feature Summary Update the minimum value of V_{DD_CORE}, $V_{DD_LDO_CORE}$ and maximum value of V_{DD_RF} in Voltage and current operating requirements Updated Table 31 Added footnotes to Table 42
7	September 2022	<ul style="list-style-type: none"> Updated the Ordering information of radio parts and non-radio parts in Front Matter Content content to reflect "B" instead of "A" as Silicon Revision Updated Table 63
8	December 2022	<ul style="list-style-type: none"> Updated Front matter content Updated Power Consumption Operating Behaviors and removed IDD tables for phantom parts Updated minimum and maximum value of Electrostatic discharge voltage, charged-device model (antenna pin) in ESD and Latch-Up Ratings to -250 V and +250 V

Table continues on the next page...

Table 67. Revision History (continued)

Rev. No.	Date	Substantial Changes
		<ul style="list-style-type: none"> Updated Power mode transition operating behaviors to remove t_{POR} and $t_{PORFAST}$ Updated description and I_{DD} values in Low power mode peripheral power consumption adders Removed 26.0 MHz information from Reference oscillator specification Merged crystal and frequency tolerance entry and crystal frequency stability and aging information entry to single entry in Reference oscillator specification Removed the maximum value of $SEL_{BLE1M, 4+ MHz}$ in Table 42 Removed 26 MHz from Reference frequency bullet in Transmit and PLL Feature Summary Added SoC Power Consumption section Updated typical value of f_{ref} in 2.4 GHz radio transceiver electrical specification to show 32 MHz only Updated the typical value of $TRIM_{step}$ in Free-running oscillator FRO-32K specifications to 0.03 Added footnote to PTC6 pin in 40 HVQFN package in Pinout Table Added footnote to PTC5 in 40HVQFN pinout diagram Removed $V_{switchWakeup}$ and $t_{switchWakeup}$ from Smart power switch Updated Part number format and Package marking
9	December 2022	<ul style="list-style-type: none"> Updated the frequency from 48 MHz to 64 MHz in "Dedicated CM3 core running at up to 48MHz" in front matter Updated the complete ESD and Latch-Up Ratings table

Legal information

Data sheet status

Document status ^{[1][2]}	Product status ^[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <http://www.nxp.com>.

Definitions

Draft — A draft status on a document indicates that the content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included in a draft version of a document and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the Terms and conditions of commercial sale of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <http://www.nxp.com/profile/terms>, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Suitability for use in automotive applications — This NXP product has been qualified for use in automotive applications. If this product is used by customer in the development of, or for incorporation into, products or services (a) used in safety critical applications or (b) in which failure could lead to death, personal injury, or severe physical or environmental damage (such products and services hereinafter referred to as "Critical Applications"), then customer makes the ultimate design decisions regarding its products and is solely responsible for compliance with all legal, regulatory, safety, and security related requirements concerning its products, regardless of any information or support that may be provided by NXP. As such, customer assumes all risk related to use of any products in Critical Applications and NXP and its suppliers shall not be liable for any such use by customer. Accordingly, customer will indemnify and hold NXP harmless from any claims, liabilities, damages and associated costs and expenses (including attorneys' fees) that NXP may incur related to customer's incorporation of any product in a Critical Application.

Quick reference data — The Quick reference data is an extract of the product data given in the Limiting values and Characteristics sections of this document, and as such is not complete, exhaustive or legally binding.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Translations — A non-English (translated) version of a document, including the legal information in that document, is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.

Security — Customer understands that all NXP products may be subject to unidentified vulnerabilities or may support established security standards or specifications with known limitations. Customer is responsible for the design and operation of its applications and products throughout their lifecycles to reduce the effect of these vulnerabilities on customer's applications and products. Customer's responsibility also extends to other open and/or proprietary technologies supported by NXP products for use in customer's applications. NXP accepts no liability for any vulnerability. Customer should regularly check security updates from NXP and follow up appropriately.

Customer shall select products with security features that best meet rules, regulations, and standards of the intended application and make the ultimate design decisions regarding its products and is solely responsible for compliance with all legal, regulatory, and security related requirements concerning its products, regardless of any information or support that may be provided by NXP.

NXP has a Product Security Incident Response Team (PSIRT) (reachable at PSIRT@nxp.com) that manages the investigation, reporting, and solution release to security vulnerabilities of NXP products.

Trademarks

Notice: All referenced brands, product names, service names, and trademarks are the property of their respective owners.

NXP — wordmark and logo are trademarks of NXP B.V.
