

**FEATURES**

- Operating Supply Voltage up to 46V
- Total Saturation Voltage 3.4V max at 1A
- Overtemperature Protected
- Operates in Switched and L/R Regulation Modes
- 25W Power-Tab Package for Low Installed Cost
- Individual Logic Inputs for Each Driver
- Channel-Enable Logic Inputs for Driver Pairs

**DESCRIPTION**

The L298 is a power integrated circuit usable for driving resistive and inductive loads. This device contains four push-pull drivers with separate logic inputs. Two enable inputs are provided for power down and chopping. Each driver is capable of driving loads up to 2A continuously.

Logic inputs to the L298 have high input thresholds (1.85V) and hysteresis to provide trouble-free operation in noisy environments normally associated with motors and inductors. The L298 input currents and thresholds allow the device to be driven by TTL and CMOS systems without buffering or level shifting.

The emitters of the low-side power drivers are separately available for current sensing. Feedback from the emitters can be used to control load current in a switching mode, or can be used to detect load faults.

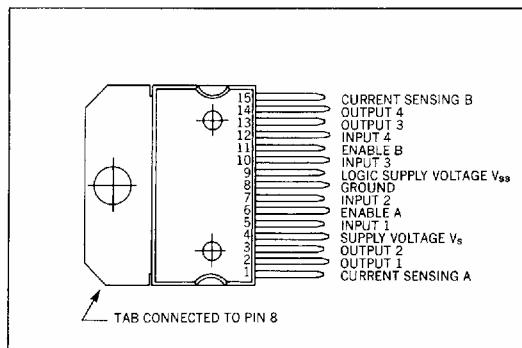

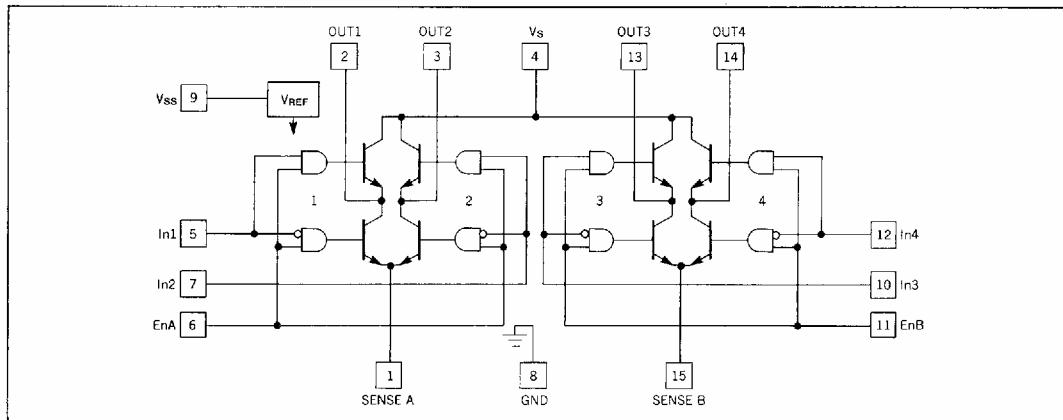

Separate logic and load supply lines are provided to reduce total IC power consumption. Power consumption is reduced further when the enable inputs are low. This makes the L298 ideal for systems that require low standby current, such as portable or battery-operated equipment.

**ABSOLUTE MAXIMUM RATINGS**

|  |                 |
|--|-----------------|
| Power Supply, $V_S$ .....  | 50V             |
| Logic Supply Voltage, $V_{SS}$ .....                                 | 7V              |
| Input and Inhibit Voltage, $V_i, V_{inhibit}$ .....                  | -0.3V to +7V    |
| Peak Output Current (each channel), $I_o$                            |                 |
| Non-Repetitive ( $t = 100\mu s$ ).....                               | 3A              |
| Repetitive (80% on - 20% off; $t_{on} = 10ms$ ) .....                | 2.5A            |
| DC Operation .....   | 2A              |
| Sensing Voltage, $V_{sens}$ .....                                    | -1V to +2.3V    |
| Total Power Dissipation ( $T_{case} = 75^\circ C$ ), $P_{tot}$ ..... | 25W             |
| Storage and Junction Temperature, $T_{stg}, T_j$ .....               | -40°C to +150°C |

**THERMAL DATA**

Thermal Resistance Junction-Case,  $R_{th j-case}$  ..... 3°C/W max.  
 Thermal Resistance Junction-Ambient,  $R_{th j-amb}$  ..... 35°C/W max.
