

## Very low drop 1A regulator

#### **Feature summary**

- Low dropout voltage (450mV typ. at 1A)
- Very low quiescent current
- Thermal shutdown
- Short circuit protection
- Reverse polarity protection

#### **Description**

The L4941 is a three terminal 5V positive regulators available in TO-220 and DPAK packages, making it useful in a wide range of industrial and consumer applications. Thanks to its very low input/output voltage drop, these devices are particularly suitable for battery powered equipments, reducing consumption and

prolonging battery life. It employs internal current limiting, antisaturation circuit, thermal shut-down and safe area protection.

## 7 Schematic application

Figure 21. Distributed supply with On-card L4940 and L4941 low drop regulator

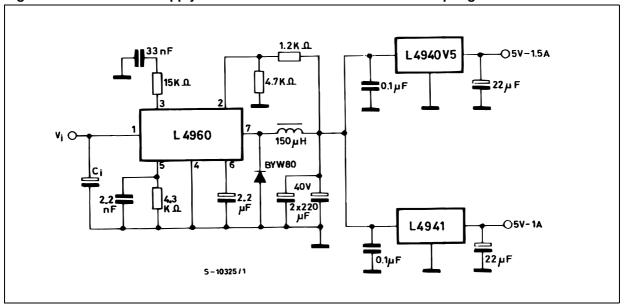

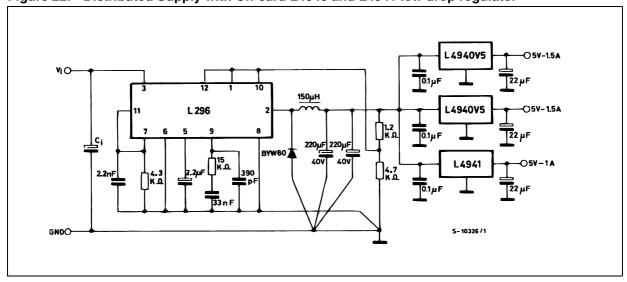

Figure 22. Distributed Supply with On-card L4940 and L4941 low drop regulator

ADVANTAGES OF THESE APPLICATION ARE:

On card regulation with short-circuit and thermal protection on each output.

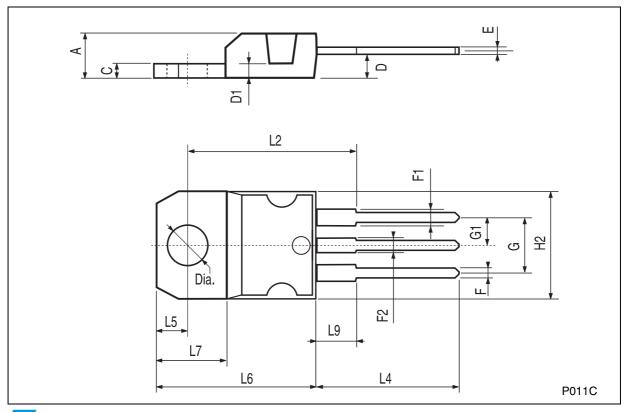

Vary high total system efficiency due to the switching preregulation and very low-drop postregulation.

# 8 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK<sup>®</sup> packages. These packages have a Lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
