

LINEAR INTEGRATED CIRCUITS

3-TERMINAL POSITIVE VOLTAGE REGULATORS

- OUTPUT CURRENT UP TO 1.5A
- OUTPUT VOLTAGES OF 5; 6; 8; 12; 15; 18; 20; 24V
- THERMAL OVERLOAD PROTECTION
- SHORT CIRCUIT PROTECTION
- OUTPUT TRANSISTOR SOA PROTECTION

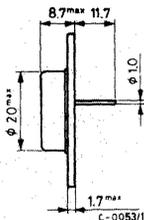

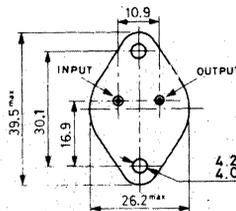

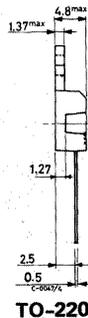

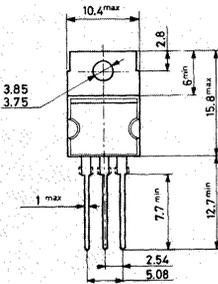

The L7800 series of three-terminal positive regulators is available in TO-220 and TO-3 packages and with several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shut-down and safe area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

ABSOLUTE MAXIMUM RATINGS

V_i	DC input voltage (for $V_o = 5$ to 18V) (for $V_o = 20, 24V$)	35 V 40 V
I_o	Output current	internally limited
P_{tot}	Power dissipation	internally limited
T_{op}	Operating junction temperature (for L7800) (for L7800C)	-55 to +150 °C 0 to +150 °C
T_{stg}	Storage temperature	-65 to +150 °C

APPLICATION INFORMATION (continued)

Fig. 30 - Power AM modulator (unity voltage gain, $I_o \leq 1A$)

Note: The circuit performs well up to 100 KHz.

Fig. 31 - Adjustable output voltage with temperature compensation

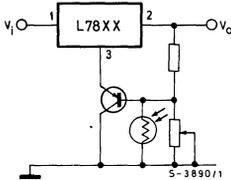

Note: Q_2 is connected as a diode in order to compensate the variation of the Q_1 V_{BE} with the temperature. C allows a slow rise-time of the V_o

$$V_o = V_{XX} \left(1 + \frac{R_2}{R_1}\right) + V_{BE}$$

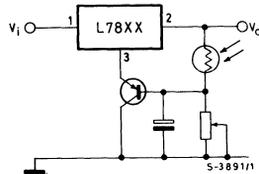

Fig. 32 - Light controllers ($V_o \min = V_{XX} + V_{BE}$)

(a)

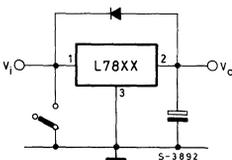

V_o falls when the light goes up

(b)

V_o rises when the light goes up

Fig. 33 - Protection against input short-circuit with high capacitance loads

Applications with high capacitance loads and an output voltage greater than 6 volts need an external diode (see fig. 33) to protect the device against input short circuit. In this case the input voltage falls rapidly while the output voltage decreases slowly. The capacitance discharges by means of the Base-Emitter junction of the series pass transistor in the regulator. If the energy is sufficiently high, the transistor may be destroyed. The external diode by-passes the current from the IC to ground.
