LA73079CL — Monolithic Linear IC Video Driver for DSC

Overview

The LA73079CL is a low voltage drive (2.7V to 3.6V) video driver developed for portable appliances including digital still cameras and cell phones. It incorporates a minus-voltage generator that allows the LA73079CL to generate its output with the pedestal voltage set to 0V, so that no output coupling capacitor is required. This enables substantial reduction in mounting space without concerned about V-sag.

Features

- Output coupling capacity not required
- Low-voltage drive (V_{CC} = 2.7V to 3.6V)
- No V-sag
- Sextic LPF incorporated (fc = 9MHz)
- Current drain of 0μA in the standby mode
- Amplifier gain selectable from three options (6, 12, and 16dB) (Pin control (GND/Open/V_{CC}))
- Output drive capable of covering maximum 75Ω output, one channel

Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{CC} max		4.0	V
Allowable power dissipation	Pd max	Ta ≤ 80°C, *Mounted on a specified board	160	mW
Operating temperature	Topr		-20 to +85	°C
Storage temperature	Tstg		-55 to +150	°C

*: Mounted on a specified board: 10mm×20mm×0.8mm, Paper phenol
