

## Overview

The LA7454W is an audio recording and playback processor for 8-mm VCRs that is compatible with both PAL and NTSC video standards, and which supports stereo, standard-play (SP) and long-play (LP) modes.

The LA7454W incorporates an FM modulator and demodulator, a bandpass filter and deviation limiter for processing the encoded signal. On-chip noise reduction, long-play emphasis and lowpass filter circuits process and recover the audio signals.

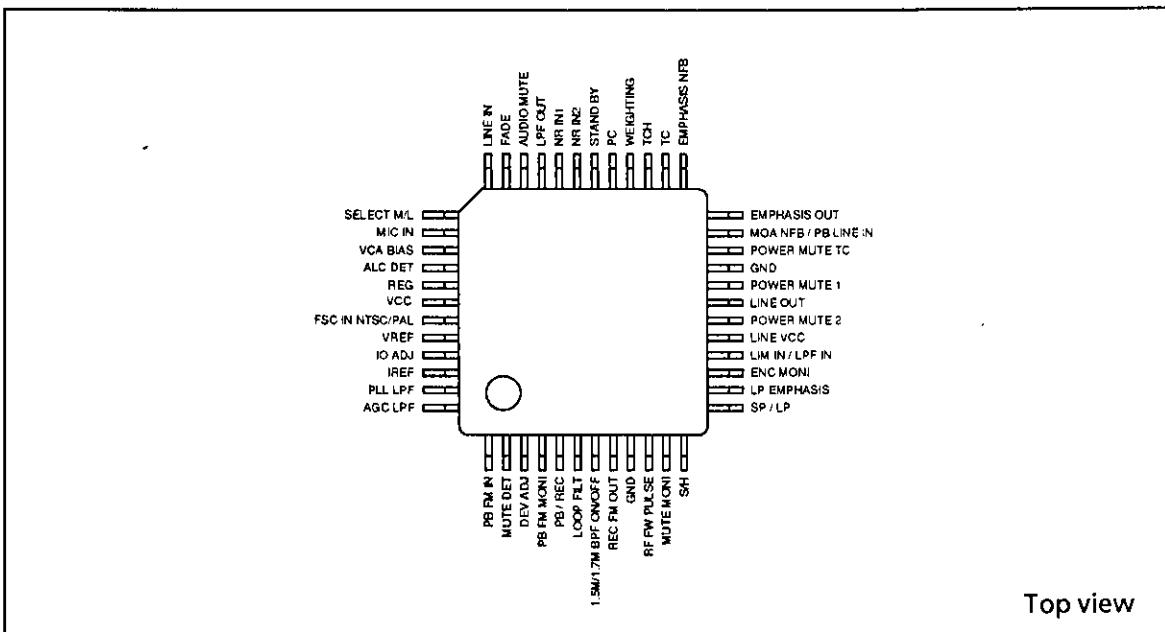

The LA7454W operates from a single 4.75 V supply and is available in 48-pin QFPs.

## Features

- Support for PAL and NTSC
- Stereo operation
- Supports SP and LP modes
- LP emphasis
- Noise reduction circuit
- Audio level control
- Audio fader
- 30 kHz lowpass filter
- 1.5 MHz bandpass filter
- Line amplifier for earphones
- Power mute for external amplifiers
- Low external component count
- Low power consumption
- 4.75 V supply
- 48-pin QFP
