1. General Description

The LC320WXN is a Color Active Matrix Liquid Crystal Display with an integral External Electrode Fluorescent Lamp(EEFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 31.51 inch diagonally measured active display area with WXGA resolution (768 vertical by 1366 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the luminance of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus presenting a palette of more than 16.7M(true) colors.

It has been designed to apply the 8-bit 1-port LVDS interface.

It is intended to support LCD TV, PCTV where high brightness, super wide viewing angle, high color gamut, high color depth and fast response time are important.

General Features

| Active Screen Size | 31.51 inches(800.4mm) diagonal |
|------------------------|--|
| Outline Dimension | 760.0 mm(H) x 450.0 mm(V) x 48.0 mm(D) (Typ.) |
| Pixel Pitch | 170.25 / x 510.75 / x RGB |
| Pixel Format | 1366 horiz. by 768 vert. pixels RGB stripe arrangement |
| Color Depth | 8bit, 16,7 M colors |
| Luminance, White | 500 cd/m² (Center 1 point) (Typ.) |
| Viewing Angle (CR>10) | Viewing angle free (R/L 178(Typ.), U/D 178(Typ.)) |
| Power Consumption | Total 87.3Watt (Typ.) (Logic=3.3 W, Lamp= 84W [Boost=1.65V]) |
| Weight | 6,150g(Typ.) |
| Display Operating Mode | Transmissive mode, normally black |
| Surface Treatment | Hard coating(3H), anti-glare treatment of the front polarizer (Haze 13%) |

Ver. 1.0 4 / 26

2. Absolute Maximum Ratings

The following items are maximum values which, if exceeded, may cause faulty operation or damage to the LCD module.

Table 1. ABSOLUTE MAXIMUM RATINGS

| Parameter | | Cymhol | Va | lue | Linit | Remark |
|----------------------------|----------------------------|---------------------|------|-------|-----------------|-------------|
| | | Symbol | Min | Max | Unit | Remark |
| Power Input LCM | | VLCD | -0.3 | +14.0 | VDC | at 25 ± 2 ℃ |
| Voltage | Backlight inverter | VBL | -0.3 | +28.0 | VDC | |
| ON/OFF Control Voltage | | V _{ON/OFF} | -0.3 | +5.5 | VDC | |
| Brightness Co | Brightness Control Voltage | | 0 | +5.0 | VDC | |
| Operating Ter | Operating Temperature | | 0 | +50 | $_{\mathbb{C}}$ | |
| Storage Temperature | | Тѕт | -20 | +60 | ℃ | Note 1.2 |
| Operating Ambient Humidity | | Нор | 10 | 90 | %RH | Note 1,2 |
| Storage Humidity | | Нѕт | 10 | 90 | %RH | |

Notes: 1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 ℃ Max. and no condensation of water.

2. Gravity mura can be guaranteed under 40 °C condition.

Ver. 1.0 5 / 26

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power for the LCD circuit.

The other Is used for the EEFL backlight and inverter circuit.

Table 2. ELECTRICAL CHARACTERISTICS

| Parameter | Symbol | | Value | Unit | Note | |
|---------------------|-------------------|------|-------|------|-----------------|-------|
| rarameter | Cymbol | Min | Тур | Max | Offic | 14010 |
| Circuit : | | | | | | |
| Power Input Voltage | V _{LCD} | 11.4 | 12.0 | 12.6 | V _{DC} | |
| Power Input Current | I _{LCD} | - | 270 | 350 | mA | 1 |
| Power Input Current | | - | 350 | 450 | mA | 2 |
| Power Consumption | P _{LCD} | - | 3.3 | 4.2 | Watt | 1 |
| Rush current | I _{RUSH} | - | - | 3.0 | А | 3 |

Notes : 1. The specified current and power consumption are under the V_{LCD} =12.0V, 25 \pm 2 °C, f_V =60Hz condition whereas mosaic pattern(8 x 6) is displayed and f_V is the frame frequency.

2. The current is specified at full white pattern.

White: 255 Gray

3. The duration of rush current is about 2ms and rising time of power input is 1ms (min.).

Black: 0 Gray

White: 255 Gray

| Life Time | | Boost(0V~3.3V) | 50,000 | | | Hrs | 5 | |

Notes:

- 1. Electrical characteristics are determined after the unit has been 'ON' and stable for approximately 120 minutes at 25± 2 ℃. The specified current and power consumption are under the typical supply Input voltage 24V and Vbr 1.65V, it is total power consumption.
 - The ripple voltage of the power supply input voltage is under 0.5 Vp-p. LPL recommend Input Voltage is $24.0V \pm 5\%$.
- 2. Electrical characteristics are determined within 30 minutes at 25± 2℃. The specified currents are under the typical supply Input voltage 24V.
- 3. Brightness Control. This VBR-A Voltage control brightness.

| Boost Voltage | Function | Boost Voltage | Function |
|---------------|--------------------------|---------------|---------------------------|
| 0V | Minimum Brightness (95%) | 3.3V | Maximum Brightness (105%) |

- 4. LPL recommend that the PWM freq. is synchronized with Two times harmonic of Vsync signal of system.
- 5. Specified Values are for a single lamp which is aligned horizontally.
 - The life time is determined as the time which luminance of the lamp is 50% compared to that of initial value at the typical/ maximum lamp current on condition of continuous operating at $25 \pm 2 \,^{\circ}$ C
- 6. The duration of rush current is about 20ms.

Ver. 1.0 7 / 26

3-2. Interface Connections

This LCD module employs two kinds of interface connection, a 30-pin connector is used for the module electronics and One connectors(14-pin) are used for the integral backlight system.

3-2-1. LCD Module

- LCD Connector(CN1): FI-X30SSL-HF (Manufactured by JAE) or Equivalent
- Mating Connector : FI-X30C2L (Manufactured by JAE) or Equivalent

Table 4. MODULE CONNECTOR(CN1) PIN CONFIGURATION

| 24 | RD- | LVDS Receiver Signal(-) | |
| 25 | RD+ | LVDS Receiver Signal(+) | |
| 26 | GND | Ground | |
| 27 | NC | NC | |
| 28 | NC | NC | |
| 29 | GND | Ground | |
| 30 | GND | Ground | 2 |

- Notes: 1. The pin no 9 is an option pin for DISM or LG format. (VESA Format = "GND" / JEIDA Format = "VCC")
 Please refer to Appendix for further details.
 - 2. The pin no 30 is LCD Test option.
 - LCM operates "AGP" (Auto Generation Pattern) or "NSB" (No Signal Black) is case that LVDS signals are out of frequency or abnormal condition in spite of 12 volt power supply. LPL recommends "NSB". (AGP : "VCC" or "OPEN" / NSB : "GND")
 - 3. All GND (ground) pins should be connected together, which should be also connected to the LCD module's metal frame.
 - 4. All VLCD (power input) pins should be connected together.
 - 5. Input Level of LVDS signal is based on the IEA 664 Standard.

3-2-2. Backlight Inverter

Master

-Inverter Connector: 20022WR-14B1

(manufactured by Yeon-Ho) or Equivalent

- Mating Connector: PHR-14 or Equivalent

Table 7. INVERTER CONNECTOR PIN CONFIGULATION

| Pin No | Symbol | Description | Master | Note |
|--------|------------|-----------------------------|--------------|---------------------------------------|
| 1 | VBL | Power Supply +24.0V | VBL | |
| 2 | VBL | Power Supply +24.0V | VBL | |
| 3 | VBL | Power Supply +24.0V | VBL | |
| 4 | VBL | Power Supply +24.0V | VBL | |
| 5 | VBL | Power Supply +24.0V | VBL | |
| 6 | GND | Backlight Ground | GND | |
| 7 | GND | Backlight Ground | GND | |
| 8 | GND | Backlight Ground | GND | 1 |
| 9 | GND | Backlight Ground | GND | |
| 10 | GND | Backlight Ground | GND | |
| 11 | Boost | 0.0V ~ 3.3V | Boost | 2 |
| 12 | VON/OFF | 0.0V ~ 5.0V | On/Off | 3, Open/High for B/L on as default |
| 13 | EXT. VBR-B | PWM signal (30%~100%) input | External PWM | 4 |
| 14 | GND | POWER GND | GND | 5 |

Notes: 1. GND should be connected to the LCD module's metal frame.

- 2. Minimum Brightness: Boost = 0.0V Maximum Brightness: Boost = 3.3V "OPEN": Boost = 1.65V
- 3. Rising Edge: Lamp "ON" / Falling Edge: Lamp "OFF"
- 4. Pin#13 can be opened. (if Pin #13 is open, EXTVBR-B is 100%)
- 5. Pin#14 can be opened. (GND or NC)
- 6. Each impedance of pin #11, 12 and 13 is $\ 147[K\Omega]$, 30 $[K\Omega]$ and 55 $[K\Omega]$.

Rear view of LCM

Ver. 1.0 9 / 26

3-3. Signal Timing Specifications

Table 6 shows the signal timing required at the input of the LVDS transmitter. All of the interface signal timings should be satisfied with the following specification for normal operation.

Table 6. TIMING TABLE for NTSC &PAL

[DE (Data Enable) Only]

| ITEM | Symbol | | Min | Тур | Max | Unit | Note |

Note:

- 1. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rate.
- 2. Above Timing Tables are only valid for DE Mode.

Ver. 1.0 10 / 26

3-4. Signal Timing Waveforms

3-5. Color Data Reference

The brightness of each primary color(red,green,blue) is based on the 8-bit gray scale data input for the color. The higher binary input, the brighter the color. Table 8 provides a reference for color versus data input.

Table 8. COLOR DATA REFERENCE

Note: 1. Please avoid floating state of interface signal at invalid period.

- 2. When the interface signal is invalid, be sure to pull down the power supply V_{LCD} to 0V.
- 3. The T3/T4 is recommended value, the case when failed to meet a minimum specification, abnormal display would be shown. There is no reliability problem.
- 4. If the on time of signals(Interface signal and Option signals) precedes the on time of Power(V_{LCD}), check the LCD logic Power(Vcc) is under 0.8V, otherwise it will be happened abnormal display.
- 5. T6 should be measured after the Module has been fully discharged between power off and on period.

3-6-2. On/Off for Inverter

3-6-3. Deep condition for Inverter

Table 10. Power Sequence for Inverter

| Darameter | | Values | | Unito | Domarko |
|-----------|------|--------|-----|-------|-----------------------------|
| Parameter | Min | Тур | Max | Units | Remarks |
| T1 | 20 | - | - | ms | 1 |
| T2 | 500 | - | - | ms | |
| T3 | 200 | - | - | ms | 2 |
| T4 | 0 | | - | ms | 3 |
| T5 | 10 | - | - | ms | |
| T6 | - | - | 10 | ms | V _{BL} (Typ) x 0.8 |
| T7 | 1000 | - | - | ms | |

Note: 1. T1 describes rising time of 0V to 24V and is not applied at restarting time.

- 2. T4(max) is less than T2.
- 3. For 1 second after lamp on (T7), Boost should be typical 1.65V and Ext. V_{BR} -B should be 100%

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable in a dark environment at 25± 2 $^{\circ}$ C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 $^{\circ}$.

FIG. 1 shows additional information concerning the measurement equipment and method.

FIG. 1 Optical Characteristic Measurement Equipment and Method

Ver. 1.0 15 / 26

Notes: 1. Contrast Ratio(CR) is defined mathematically as:

CRn = Surface Luminance at all white pixels
Surface Luminance at all black pixels

It is measured at center 1-point.

- 2. Surface luminance are determined after the unit has been 'ON' and 30min after lighting the backlight in a dark environment at 25± 2 ℃. Surface luminance is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see the FIG. 2.
- 3. The variation in surface luminance , δ WHITE and δ BLACK are defined as : δ WHITE(5P) = Maximum(L_{on1},L_{on2},\,L_{on3},\,L_{on4},\,L_{on5}) / Minimum(L_{on1},L_{on2},\,L_{on3},\,L_{on4},\,L_{on5}) / \delta BLACK(5P) = Maximum(L_{on1},L_{on2},\,L_{on3},\,L_{on4},\,L_{on5}) / Minimum(L_{on1},L_{on2},\,L_{on3},\,L_{on4},\,L_{on5}) / Where Lon1 to Lon5 are the luminance with all pixels displaying white at 5 locations . For more information, see the FIG. 2.
- 4. Response time is the time required for the display to transition from G(N) to G(M) (Rising Time, Tr) and from G(M) to G(N) (Falling Time, Tf). For additional information see the FIG. 3. (N<M)
- 5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD module surface. For more information, see the FIG. 4.
- 6. Gray scale specification
 Gamma Value is approximately 2.2. For more information, see the Table 12.

Table 12. GRAY SCALE SPECIFICATION

| Gray Level | Luminance [%] (Typ.) |
|------------|----------------------|
| LO | 0.10 |
| L15 | 0.32 |

9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

9-1. Mounting Precautions

- (1)You must mount a module using specified mounting holes (Details refer to the drawings).
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
 Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. Operating Precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage: V=± 200mV(Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)

 And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.
- (10) It is recommended to avoid the signal cable and conductive material over the inverter transformer for it can cause the abnormal display and temperature rising.
- (11) Partial darkness may happen during 3~5 minutes when LCM is operated initially in condition that luminance is under 40% at low temperature (under 5°C). This phenomenon which disappears naturally after 3~5 minutes is not a problem about reliability but LCD characteristic.

Ver. 1.0 25 / 26

9-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5 ℃ and 35 ℃ at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.

 It is recommended that they be stored in the container in which they were shipped.

9-6. Handling Precautions for Protection Film

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

APPENDIX-I-1

■ Required signal assignment for Flat Link (DS90C385) Transmitter(Pin9="L")

Notes:

- 1. The LCD module uses a 100 Ohm(Ω) resistor between positive and negative lines of each receiver input.
- 2. Refer to LVDS transmitter data sheet for detail descriptions. (THC63LVD823 or Compatible)
- 3. '7' means MSB and '0' means LSB at R,G,B pixel data.

APPENDIX-I-2

■ Required signal assignment for Flat Link (DS90C385) Transmitter(Pin9="H")

Notes:

- 1. The LCD module uses a 100 Ohm(Ω) resistor between positive and negative lines of each receiver input.
- 2. Refer to LVDS transmitter data sheet for detail descriptions. (THC63LVD823 or Compatible)
- 3. '7' means MSB and '0' means LSB at R,G,B pixel data.
