1. General Description

LC470WUN is a Color Active Matrix Liquid Crystal Display with an Cold Cathode Fluorescent Lamp(CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 46.96 inch diagonally measured active display area with WUXGA resolution (1080 vertical by 1920 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the luminance of the sub-pixel color is determined with a 10-bit gray scale signal for each dot, thus presenting a palette of more than 1.06Billion(FRC) of colors.

It has been designed to apply the 10-bit 2 port LVDS interface.

It is intended to support LCD TV, PCTV where high brightness, super wide viewing angle, high color gamut,

high color depth and fast moving picture response time are important.

General Features

Active Screen Size	46.96 inch (1192.87mm) diagonal		
Outline Dimension	1096.0(H) x 640.0 (V) x 51.0 mm (D) (Typ.)		
Pixel Pitch	0.5415 mm x 0.5415 mm x RGB		
Pixel Format	1920 horiz. by 1080 vert. Pixels, RGB stripe arrangement		
Color Depth	10Bit(D), 1.06 Billion colors		
Luminance, White	450 cd/m ² (Center 1point ,Typ.)		
Viewing Angle (CR>10)	Viewing angle free (R/L 178 (Min.), U/D 178 (Min.))		
Power Consumption	Total 219.5W (Typ.) [Logic= 6.5W, Backlight=213W (V _{BR-A} =1.65V)]		
Weight	13.0 Kg (Typ.)		
Display Mode	Transmissive mode, Normally black		
Surface Treatment	Hard coating(3H), Anti-glare treatment of the front polarizer (Haze : 10%)		

Ver. 1.0 4 / 42

2. Absolute Maximum Ratings

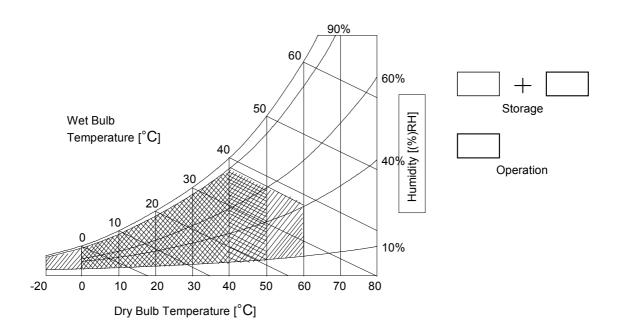

The following items are maximum values which, if exceeded, may cause faulty operation or damage to the LCD module.

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter		Symbol Value		Unit	Remark			
F 6	Parameter		Min	Max	Offic	Remark		
Power Input	LCM	VLCD	-0.3	+14.0	VDC	at 25 ± 2 °C		
Voltage	Backlight inverter	VBL	-0.3	+27.0	VDC			
ON/OFF Con	ON/OFF Control Voltage		-0.3	+5.5	VDC			
Brightness C	Brightness Control Voltage		0	+5.0	VDC			
Operating Te	mperature	Тор	0	+50	°C			
Storage Tem	Storage Temperature		Storage Temperature		-20	+60	°C	Note 1,2
Operating Ambient Humidity		Нор	10	90	%RH	Note 1,2		
Storage Hum	idity	Нѕт	10	90	%RH			

Note: 1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be Max 39 °C. and no condensation of water.

2. Gravity mura can be guaranteed below 40°C condition.

Ver. 1.0 5 / 42

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power for the LCD circuit.

The other Is used for the CCFL backlight circuit.

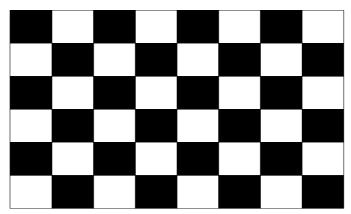

Table 2. ELECTRICAL CHARACTERISTICS

Parameter	Symbol		Value	Unit	Note	
rarameter	Oymboi	Min	Тур	Max	Offic	Note
Circuit :						
Power Input Voltage	V _{LCD}	10.8	12.0	13.2	V_{DC}	
Dower Input Current		-	540	702	mA	1
Power Input Current	I _{LCD}	-	760	988	mA	2
Power Consumption	P _{LCD}	-	6.5	8.45	Watt	1
Rush current	I _{RUSH}	-	-	5	Α	3

Note: 1. The specified current and power consumption are under the V_{LCD} =12.0V, 25 \pm 2°C, f_V=60Hz condition whereas mosaic pattern(8 x 6) is displayed and f_V is the frame frequency.

- 2. The current is specified at maximum current pattern.
- 3. The duration of rush current is about 2ms and rising time of power input is 0.5ms (min.).

Lamp:									
Discharge Stabiliz	ation Time		Ts			3	min	3	
Life Time				50,000			Hrs	4	

Notes:

- 1. Electrical characteristics are determined after the unit has been 'ON' and stable for approximately 120 minutes at 25±2°C. The specified current and power consumption are under the typical supply Input voltage 24Vand VBR (VBR-A: 1.65V & ExtVBR-B: 100%), it is total power consumption.
- 2. Electrical characteristics are determined within 30 minutes at $25\pm2^{\circ}$ C. The specified currents are under the typical supply Input voltage 24V.
- 3. The brightness of the lamp after lighted for 5minutes is defined as 100%.

 TS is the time required for the brightness of the center of the lamp to be not less than 95% at typical current.

 The screen of LCD module may be partially dark by the time the brightness of lamp is stable after turn on.
- 4. Specified Values are for a single lamp which is aligned horizontally.

 The life time is determined as the time which luminance of the lamp is 50% compared to that of initial value at the typical lamp current (VBR-A: 1.65V & ExtVBR-B:100%), on condition of continuous operating at 25± 2°C
- 5. LGD recommend that the PWM freq. is synchronized with two times harmonic of Vsync signal of system.
- 6. The duration of rush current is about 10ms.

Ver. 1.0 7 / 42

3-2. Interface Connections

This LCD module employs two kinds of interface connection, 51-pin is used for the module electronics and Master 14-pin and Slave 12-pin connectors are used for the integral backlight system.

3-2-1. LCD Module

- LCD Connector(CN1): FI-R51S-HF(manufactured by JAE) or KN25-51P-0.5SH(manufactured by Hirose)
 Refer to below and next Page table
- Mating Connector : FI-R51HL(JAE) or compatible

Table 4-1. MODULE CONNECTOR(CN1) PIN CONFIGURATION

No	Symbol	Description		No	Symbol	Description

25	R1EP	FIRST LVDS Receiver Signal (E+)		51	VLCD	Power Supply +12.0V
26	Reserved	No connection or GND		-	-	-

Notes: 1. All GND(ground) pins should be connected together to the LCD module's metal frame.

- 2. All VLCD (power input) pins should be connected together.
- 3. All Input levels of LVDS signals are based on the EIA 644 Standard.
- 4. Specific pins(pin No. #2~#6) are used for internal data process of the LCD module. If not used, these pins are no connection.
- 5. Specific pins(pin No. #8~#10) are used for OPC function of the LCD module.

 If not used, these pins are no connection. (Please see the Appendix V for more information.)
- 6. LVDS pin (pin No. #24,25,40,41) are used for 10Bit(D) of the LCD module. If used for 8Bit(R), these pins are no connection.
- 7. Specific pin No. #44 is used for "No signal detection" of system signal interface. It should be GND for NSB(No Signal Black) during the system interface signal is not. If this pin is "H", LCD Module displays AGP(Auto Generation Pattern).

3-2-2. Backlight Inverter

Master

-Inverter Connector: 20022WR-14B1(Yeonho)

or Equivalent

- Mating Connector: 20022HS-14 or Equivalent

Slave

-Inverter Connector: 20022WR-12B1(Yeonho)

or Equivalent

-Mating Connector: 20022HS-12 or Equivalent

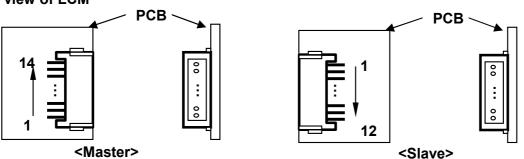

Table 5. INVERTER CONNECTOR PIN CONFIGURATION

Pin No	Symbol	Description	Master	Slave	Note
1	VBL	Power Supply +24.0V	VBL	VBL	
2	VBL	Power Supply +24.0V	VBL	VBL	
3	VBL	Power Supply +24.0V	VBL	VBL	
4	VBL	Power Supply +24.0V	VBL	VBL	
5	VBL	Power Supply +24.0V	VBL	VBL	
6	GND	Backlight Ground	GND	GND	
7	GND	Backlight Ground	GND	GND	
8	GND	Backlight Ground	GND	GND	1
9	GND	Backlight Ground	GND	GND	
10	GND	Backlight Ground	GND	GND	
11	VBR-A	Analog Dimming	VBR-A	Don't care	2
12	Von/off	Backlight ON/OFF control	VON/OFF	Don't care	3
13	EXTVBR-B	External PWM	EXT VBR-B	-	4
14	Status	Lamp Status	Status	-	5

Notes: 1. GND should be connected to the LCD module's metal frame.

- 2. Minimum Brightness: 0.0V / Maximum Brightness: 3.3V / "OPEN": 1.65V
- 3. ON : 2.5 \sim 5.0V / OFF : 0.0 \sim 0.8V . Open or 'H' for B/L On is default status.
- 4. High: Lamp ON/ Low: Lamp OFF, Pin#13 can be opened. (if Pin #13 is open, EXTVBR-B is 100%) Please see Appendix V for more information.
- 5. Normal: Low (under 0.7V) / Abnormal: High (upper 3.0V) Please see Appendix VI for more information.
- 6. Each impedance of pin #11, 12 and 13 is over 96 [K Ω], over 100[K Ω] and over 100[K Ω].

Rear view of LCM

Ver. 1.0 9 / 42

3-3. Signal Timing Specifications

Table 6 shows the signal timing required at the input of the LVDS transmitter. All of the interface signal timing should be satisfied with the following specification for normal operation.

Table 6. TIMING TABLE for NTSC (DE Only Mode)

	TEM	Symbol	Min	Тур	Max	Unit	Note
	Display Period	t⊦∨	-	960	-	tclk

	Vertical	fv	47	50	53	Hz	

Note: The Input of HSYNC & VSYNC signal does not have an effect on normal operation(DE Only Mode).

The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rate.

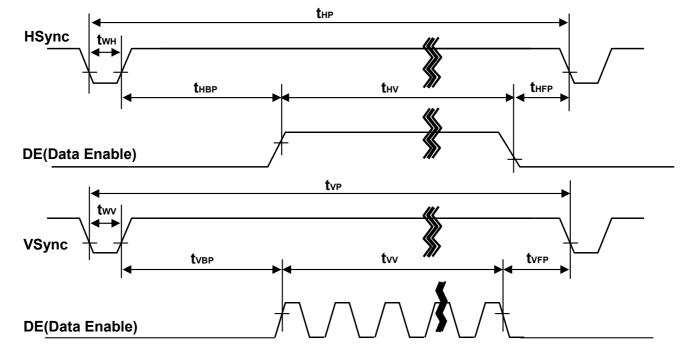

Ver. 1.0 10 / 42

3-4. Signal Timing Waveforms

* Reference : Sync. Relation

- * $t_{HB} = t_{HFP} + t_{WH} + t_{HBP}$
- * $t_{VB} = t_{VFP} + t_{WV} + t_{VBP}$

Ver. 1.0

3-5. Color Data Reference

The brightness of each primary color(red,green,blue) is based on the 10-bit gray scale data input for the color. The higher binary input, the brighter the color. Table 8 provides a reference for color versus data input.

Table 8. COLOR DATA REFERENCE

Notes: 1. T1 describes rising time of 0V to 24V and this parameter does not applied at restarting time.

- 2. T4(max) is less than T2.
- 3. In T7 section, EXTV_{BR-B} is recommended 100%.

Ver. 1.0 14 / 42

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable in a dark environment at $25\pm2^{\circ}$ C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 °.

FIG. 1 shows additional information concerning the measurement equipment and method.

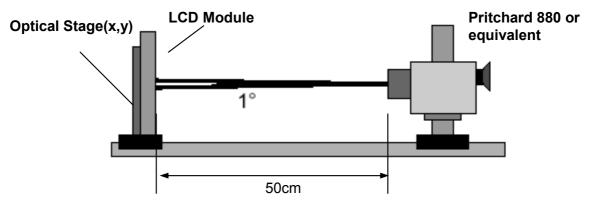

FIG. 1 Optical Characteristic Measurement Equipment and Method

Ver. 1.0 15 / 42

Notes: 1. Contrast Ratio (CR) is defined mathematically as:

CR (Contrast Ratio) = Maximum CRn (n=1, 2, 3, 4, 5)

CR = Surface Luminance at position n with all white pixels
Surface Luminance at position n with all black pixels

n =the Position number(1, 2, 3, 4, 5). For more information, see FIG 2.

- 2. Surface luminance is determined after the unit has been 'ON' and 1Hour after lighting the backlight in a dark environment at 25±2°C. Surface luminance is the luminance value at center 1-point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see the FIG. 2.
- 3. The variation in surface luminance , δ WHITE is defined as : δ WHITE(5P) = Maximum(L_{on1},L_{on2}, L_{on3}, L_{on4}, L_{on5}) / Minimum(L_{on1},L_{on2}, L_{on3}, L_{on4}, L_{on5}) Where L_{on1} to L_{on5} are the luminance with all pixels displaying white at 5 locations . For more information, see the FIG. 2.
- 4. Response time is the time required for the display to transit from G(N) to G(M) (Rise Time, Tr_R) and from G(M) to G(N) (Decay Time, Tr_D). For additional information see the FIG. 3. (N<M)
 ※ G to G Spec is average of measured time (N, M = 0 (Black) ~ 1023(White), 128 gray step). Photo Detector: RD-80S / Field: 2°
- 5. Gray to Gray Response time uniformity is Reference data. Please see Appendix XI.
- 6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD module surface. For more information, see the FIG. 4.
- 7. Gray scale specification
 Gamma Value is approximately 2.2. For more information, see the Table 12.

9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

9-1. Mounting Precautions

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
 Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer. * There is no problem of Panel crack under 5kgf / φ10mm
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. Operating Precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : V=±200mV(Over and under shoot voltage)
- (2) Response time depends on the temperature .(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)

 And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer
- (4) Be careful for condensation at sudden temperature change .Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw.
 - (if not, it can causes conductive particles and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.
- (10) It is recommended to avoid the signal cable and conductive material over the inverter transformer for it can cause the abnormal display and temperature rising.
- (11) Partial darkness may happen during 3~5 minutes when LCM is operated initially in condition that luminance is under 40% at low temperature (under 5°C). This phenomenon which disappears naturally after 3~5 minutes is not a problem about reliability but LCD characteristic

Ver. 1.0 25 / 42

9-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

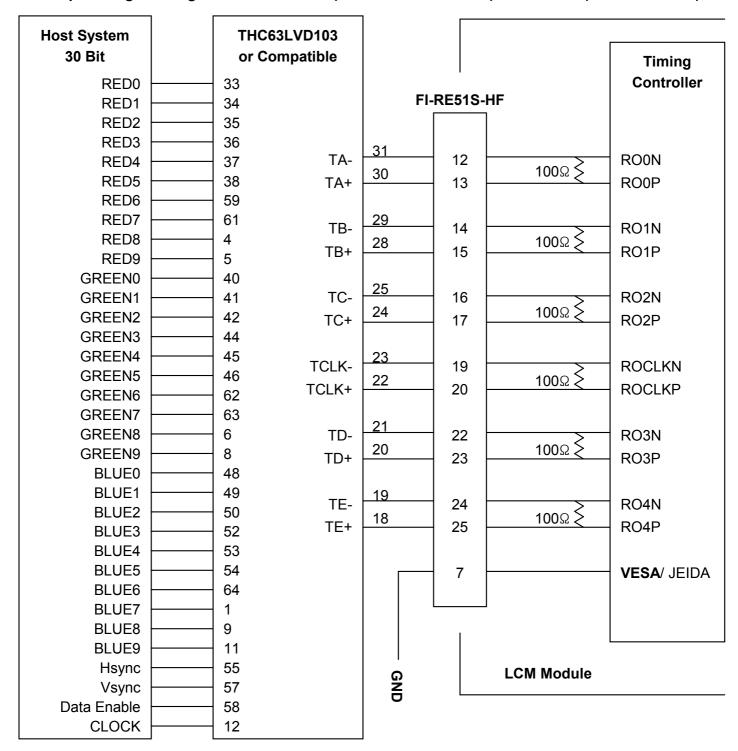

9-6. Handling Precautions for Protection Film

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

Inverter 13th Pin (EXTVBR-B) Design Guide

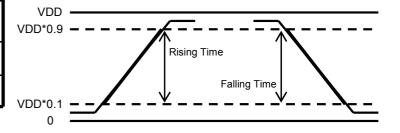

- ♦ When OPC Enable is "H", OPC Output = System Dimming.
 OPC Output(PWM Signal) is synchronized with V-Sync Freq. of System in T-Con Board.
- ♦ Regardless of OPC, System should always give dimming Signal (EXTVBR-B) to T-con.

♦ PWM Specification (VDD = 3.3V) @ OPC

PWM High Voltage Range : 2.5V~3.6V
 PWM Low Voltage Range : 0.0V~0.8V

Input Frequency	MAX 1Khz (Recommendation:50~300Hz)
Rising Time	MAX 10.0 μs
Falling Time	MAX 10.0 μs

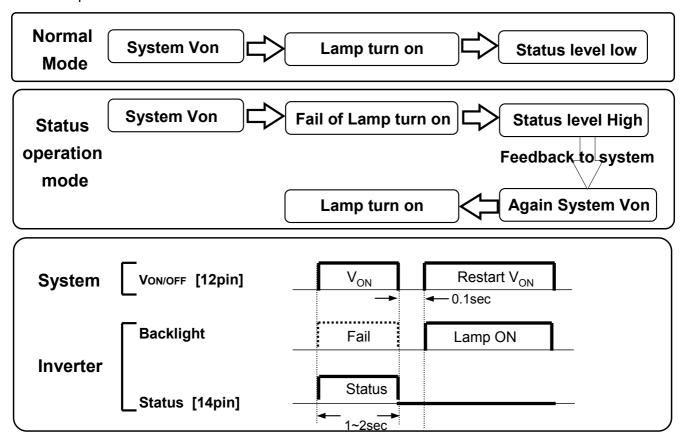

Ver. 1.0 32 / 42

APPENDIX- VI

Inverter 14th Pin (Status) Design Guide

- ☐ Function of Status pin
- Purpose : Preventing of backlight off by restarting the inverter technically
- How to: When inverter is abnormal operation, TV system inputs the Von signal in the inverter once more to turn on the lamp safely
- Attention : Restart system's Von signal when status pin continue 1~2sec high

 (The turn on time of lamp can be late such as the low temperature or the storage time)
- ☐ Status operation modes in TV set

□ Inverter pin map

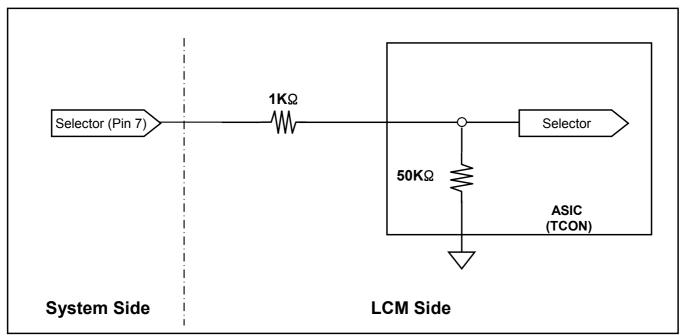

14	Status	Normal : Under 0.7V Abnormal : Upper 3.0V	status

APPENDIX- X-1

Mega DCR using condition(1)

- After Inverter ON signal, PWM Duty 100% should be sustained during 2sec.
- It is recommended not to sustain more than 10 min for Deep Dimming (PWM Low Duty 0%~20%).

The deep dimming must be used very carefully due to limitation of lamp characteristics and specification.

1) For stable lamp on, its duty condition should follow below the condition. After Inverter ON signal, T0 duration should be sustained.

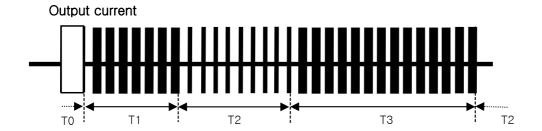

- 2) Low duty(0%~20%) of PWM input, B/L may not satisfy some of LCM specification.
 - Duration: the low duty operation(0 ~ 20%) must be limited within 10 minutes for one time operation.
 - Ratio: the period of the low duty operation must be less than 1/5 compare to that of the high duty operation(20~100%) in a certain period to prevent unwanted operation.
 - FOS: partial darkness or darkness of center area during the low duty might be happened due to insufficient lamp current.
 - Warm up : the low duty must be used 3 min after the lamps "ON". In case of low temperature, more warm up time may be needed.

Ver. 1.0 40 / 42

APPENDIX- X-2

Mega DCR using condition(2)

Doromotor		Value		l lmi4	Note	
Parameter	Min	Тур	Max	Unit	Note	
T1	3	-	-	min	PWM High Duty[20~100%]	
T2	-	-	10	min	PWM Low Duty[0~20%]	
T3	T2 x 5	-	-	min	PWM High Duty[20~100%]	

- 3) The output current duty may not be same as input PWM duty due to rise/fall time of output.
- 4) Following the recommended conditions as aforementioned, there is no difference of lamp lifetime between conventional method and new one.

Note : 1. To make Mega DCR > 50000:1, V_{BR} -A and PWM duty must be given by system.

2. DCR >50000:1 is defined mathematically as :

DCR = Maximum DCRn (n=1, 2, 3, 4, 5)

DCRn = $\frac{\text{Surface Luminance at position n with all white pixels (PWM duty =0~20%, VBR-A=1.65V)}}{\text{Surface Luminance at position n with all black pixels (PWM duty =0~20%, VBR-A=1.65V)}}$

n =the Position number(1, 2, 3, 4, 5).

- 3. Measurement Sequence (aging time 10 min each pattern):
 - 1 Turn On LCM
 - 2 Measure Black Luminance (VBR-B=0~20%, VBR-A=1.65V)
 - ③ Measure White Luminance (VBR-B=100%, VBR-A=1.65V)

Ver. 1.0 41 / 42

APPENDIX- XI

Gray to Gray Response Time Uniformity

This is only the reference data of G to G and uniformity for LC470WUN-SBC2 model.

1. G to G Response Time:

Response time is defined as Figure 3 and shall be measured by switching the input signal for "Gray (N)" and "Gray(M)".(128 Gray Step at 10bit (D))

2. G to G Uniformity

The variation of G to G Uniformity , δ G to G is defined as :

G to G Uniformity =
$$\frac{Maximum(GtoG) - Typical(GtoG)}{Typical(GtoG)} \le 1$$

*Maximum (GtoG) means maximum value of measured time (N, M = 0 (Black) ~ 1023(White), 128 gray step).

	0Gray	127ray	255Gray	•••	895Gray	1023Gray
