

LM12864FBC-1

LCD Module User Manual

Shenzhen TOPWAY Technology Co., Ltd.

Rev.	Descriptions	Release Date
0.1	Preliminary New release	2005-12-22

Table of Content

1. Basic Specifications	3
1.1 Display Specifications	3
1.2 Mechanical Specifications	3
1.3 Block Diagram	3
1.4 Terminal Functions	4
2. Absolute Maximum Ratings	5
3. Electrical Characteristics	5
3.1 DC Characteristics	5
3.2 LED Backlight Circuit Characteristics	5
3.3 AC Characteristics	6
4. Function Specifications	7
4.1 Basic Setting	7
4.2 Adjusting the LCD display contrast	7
4.3 Display Memory Map	7
4.4 Internal Registers	8
4.5 Display Control Instructions	8
5. Design and Handling Precaution	9

1. Basic Specifications

1.1 Display Specifications

- 1) LCD Display Mode : STN-YG, Positive, Transflective
- 2) Display Color : Display Data = "1" : Dark Blue (*1)
: Display Data = "0" : Light Yellow Green (*2)
- 3) Viewing Angle : 6 H
- 4) Driving Method : 1/64 duty, 1/9bias
- 5) Back Light : Yellow Green LED backlight

Note:

*1. Color tone may slightly change by Temperature and Driving Condition.

*2. The Color is defined as the inactive / background color

www.DataSheet4U.com

1.2 Mechanical Specifications

- 1) Outline Dimension : 78.0 x 70.0 x 12.9MAX
(see attached Outline Drawing for details)

1.3 Block Diagram

1.4 Terminal Functions

Pin No.	Pin Name	I/O	Descriptions
1	CS1	Input	Chip selection, When CS1=1 (*1) enable access to the Left Side (64 column) of the LCD module
2	CS2	Input	Chip selection When CS2=1 (*1) enable access to the Right Side (64 column) of the LCD module
3	VSS	Power	Negative Power Supply, Ground (0V)
4	VDD	Power	Positive Power Supply
5	V0	Power	LCD Contrast reference
6	RS	Input	RS = H; DB0 – DB7 = Display RAM data RS = L; DB0 – DB7 = Instruction data
7	R/W	Input	In read mode R/W = H; Data read from the LCD module, data appears at DB0 – DB7 and can be read by the host while, E = H and the device is being selected In write mode R/W = L; Data write to the LCD module, data appears at DB0 – DB7 will be written into the LCD module at E = H→L and device is being selected
8	E	Input	
9	DB0	I/O	Data bus;
:	:	:	Three state I/O terminal for display data or instruction data
16	DB7	I/O	
17	BLA	Power	Positive Power for LED backlight
18	BLK	Power	Negative Power for LED backlight
19	NC	-	No Connection (leave open)
20	VOUT	Output	Power Booster output for V0

Note:

- *1. Display or instruction data could write into the LCD module's driver/controllers individually or at the same time. Only read display or instruction data from one of the driver/controller in the LCD module at a time, otherwise unexpected data collision may occur.

2. Absolute Maximum Ratings

Items	Symbol	Min.	Max.	Unit	Condition
Supply Voltage	V_{DD}	0	7.0	V	$V_{SS} = 0V$
Operating Temperature	T_{OP}	-20	70	°C	No Condensation
Storage Temperature	T_{ST}	-30	80	°C	No Condensation

Cautions:

Any Stresses exceeding the Absolute Maximum Ratings may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

3. Electrical Characteristics

3.1 DC Characteristics

$V_{SS}=0V$, $V_{DD}=5.0V$, $T_{OP}=25^{\circ}C$

Items	Symbol	MIN.	TYP.	MAX.	Unit	Applicable Pin
Operating Voltage	V_{DD}	4.8	5.0	5.2	V	VDD
Input High Voltage	V_{IH}	3.5	-	V_{DD}	V	RS, R/W, E, CS1, CS2, DB0-DB7
Input Low Voltage	V_{IL}	0	-	0.4	V	
Operating Current	I_{DD}	-	6.5	15	mA	VDD, VSS

3.2 LED Backlight Circuit Characteristics

$V_{BLK}=0V$, $I_{f_{BLA}}=270mA$, $T_{OP}=25^{\circ}C$

Items	Symbol	MIN.	TYP.	MAX.	Unit	Applicable Pin
Forward Voltage	$V_{f_{BLA}}$	-	5.0	-	V	BLA
Forward Current	$I_{f_{BLA}}$	-	-	390	mA	BLA

Cautions:

Exceeding the recommended driving current could cause substantial damage to the backlight and shorten its lifetime.

3.3 AC Characteristics

 $V_{SS}=0V$, $V_{DD}=5.0V$, $T_{OP}=25^{\circ}C$

Item	Symbol	MIN.	TYP.	MAX.	Unit
E cycle time	t_c	1500	-	-	ns
E high level width	t_{wh}	700	-	-	ns
E low level width	t_{wl}	700	-	-	ns
E rise time	t_r	-	-	18	ns
E fall time	t_f	-	-	18	ns
Address set-up time	t_{asu}	210	-	-	ns
Address hold time	t_{ah}	15	-	-	ns
Data set-up time	t_{dsu}	300	-	-	ns
Data delay time	t_d	-	-	480	ns
Data hold time (write)	t_{dhw}	15	-	-	ns
Data hold time (read)	t_{dhr}	30	-	-	ns

Host Write Timing Diagram

Host Read Timing Diagram

4. Function Specifications

4.1 Basic Setting

To drive the LCD module correctly and provide normally display, please use the following setting

Display start line (Z address)= 0

LCD Display = on

Note:

These setting/commands should issue to both controllers while start up.

See the Display Control Instructions section for details.

www.DataSheet4U.com

4.2 Adjusting the LCD display contrast

A Variable-Resistor must be connected to the LCD module for providing a reference to V0. Adjusting the VR will result the change of LCD display contrast.

The recommended value of VR is 25k to 50k

4.3 Display Memory Map

Page (X) address	data	LCD Display (front view)	
0	D0 : D7		
1	D0 : D7		
2	D0 : D7		
3	D0 : D7		
4	D0 : D7		
5	D0 : D7		
6	D0 : D7		
7	D0 : D7		
Column(Y) Address		00h → 3Fh	00h → 3Fh
Chip Select		CS1=1, CS2=0	CS1=0, CS2=1

Note:

- 1) Display star line (Z address) = 0
- 2) The Display Data store separately in two drivers.
- 3) The Display Data for the left section could be accessed by CS1=1.
The Display Data for the right section could be accessed by CS2=1.

4.4 Internal Registers

There are three registers in each section of LCD module. Each of them could be controlled independently.

Page (X) Address Register

X address register designates pages of the internal display data RAM. Count function is not available. The address should set by instruction.

Column (Y) Address Counter

Y address counter designates address of the internal display data RAM. It could be set by instruction and is increased by 1 automatically by read or write display data operations.

Display Start Line (Z) Register

Z address register indicates of display data RAM to LCD top line. It may be used for scrolling the display pattern on the LCD.

4.5 Display Control Instructions

Instructions	Code										Function	Note
	RS	RW	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0		
Display on/off	0	0	0	0	1	1	1	1	1	1/0	Controls the display on or off. Internal status and display data in RAM is not affected 0=off, 1=on	*2
Set Column (Y) Address	0	0	0	1	Y address (0-63)					Set the Column address into the Y address counter	*2	
Set Page (X) Address	0	0	1	0	1	1	1	X address (0-7)			Set the Page address into the X address register	*2
Set Display Start Line (Z address)	0	0	1	1	Z address (0-63)					Indicates the display data RAM displayed at the top of the screen	*2	
Status Read	0	1	Busy	0	on/off	Reset	0	0	0	0	Read status Busy=L, Driver ready; Busy=H, Driver busy on/off=L, Display is on; on/off=H, Display is off Reset=L, Normal Running; Reset=H, reset	*1
Write Display Data	1	0	Write data								Write display data into display data RAM, After writing instruction, Y address counter increased by 1 automatically	*2
Read Display Data	1	1	Read data								Read display data form the display data RAM	*1

Note:

- *1. Only one section (driver) could be read at the same time.
i.e. only the following setting is valid for the operation:
CS1=1, CS2=0 is valid
CS1=0, CS2=1 is valid
- *2. Instruction could be write into both drivers at the same time.
- *3. For the details of the Display Control Instructions, please refer to Samsung S6B0108 handbook.

5. Design and Handling Precaution

1. The LCD panel is made by glass. Any mechanical shock (eg. dropping from high place) will damage the LCD module.
2. Do not add excessive force on the surface of the display, which may cause the Display color change abnormally.
3. The polarizer on the LCD is easily get scratched. If possible, do not remove the LCD protective film until the last step of installation.
4. Never attempt to disassemble or rework the LCD module.
5. Only Clean the LCD with Isopropyl Alcohol or Ethyl Alcohol. Other solvents (eg. water) may damage the LCD.
6. When mounting the LCD module, make sure that it is free from twisting, warping and distortion.
7. Ensure to provide enough space (with cushion) between case and LCD panel to prevent external force adding on it, or it may cause damage to the LCD or degrade the display result.
8. Only hold the LCD module by its side. Never hold LCD module by add force on the heat seal or TAB.
9. Never add force to component of the LCD module. It may cause invisible damage or degrade of the reliability.
10. LCD module could be easily damaged by static electricity. Be careful to maintain an optimum anti-static work environment to protect the LCD module.
11. When peeling off the protective film from LCD, static charge may cause abnormal display pattern. It is normal and will resume to normal in a short while.
12. Take care and prevent get hurt by the LCD panel sharp edge.
13. Never operate the LCD module exceed the absolute maximum ratings.
14. Keep the signal line as short as possible to prevent noisy signal applying to LCD module.
15. Never apply signal to the LCD module without power supply.
16. IC chip (eg. TAB or COG) is sensitive to the light. Strong lighting environment could possibly cause malfunction. Light sealing structure casing is recommend.
17. LCD module reliability may be reduced by temperature shock.
18. When storing the LCD module, avoid exposure to the direct sunlight, high humidity, high temperature or low temperature. They may damage or degrade the LCD module
