# LM308A

Precision Operational Amplifier

The LM308A operational amplifier provides high input impedance, low input offset and temperature drift, and low noise. These characteristics are made possible by use of a special Super Beta processing technology. This amplifier is particularly useful for applications where high accuracy and low drift performance are essential. In addition high speed performance may be improved by employing feedforward compensation techniques to maximize slew rate without compromising other performance criteria.

The LM308A offers extremely low input offset voltage and drift specifications allowing usage in even the most critical applications without external offset nulling.

- Operation from a Wide Range of Power Supply Voltages
- Low Input Bias and Offset Currents
- Low Input Offset Voltage and Guaranteed Offset Voltage Drift Performance
- High Input Impedance

LM308A

MAXIMUM RATINGS (T_A = +25°C, unless otherwise noted.)

Rating	Symbol	Value	Unit
Power Supply Voltage	V_{CC}, V_{EE}	±18	Vdc
Input Voltage (Note 1)	V_I	±15	V
Input Differential Current (Note 2)	I_{ID}	±10	mA
Output Short Circuit Duration	t_{SC}	Indefinite	–
Operating Ambient Temperature Range	T_A	0 to +70	°C
Storage Temperature Range	T_{stg}	−65 to +150	°C
Junction Temperature	T_J	+150	°C

1. For supply voltages less than ±15 V, the maximum input voltage is equal to the supply voltage.
2. The inputs are shunted with back−to−back diodes for overvoltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1.0 V is applied between the inputs, unless some limiting resistance is used.

ELECTRICAL CHARACTERISTICS (Unless otherwise noted these specifications apply for supply voltages of +5.0 V ≤ V_{CC} ≤ +15 V and −5.0 V ≥ V_{EE} ≥ −15 V, T_A = +25°C.)

Characteristic	Symbol	Min	Typ	Max	Unit
Input Offset Voltage	V_{IO}	–	0.3	0.5	mV
Input Offset Current	I_{IO}	–	0.2	1.0	nA
Input Bias Current	I_{IB}	–	1.5	7.0	nA
Input Resistance	r_i	10	40	–	MΩ
Power Supply Currents (V_{CC} = +15 V, V_{EE} = −15 V)	I_{CC}, I_{EE}	–	±0.3	±0.8	mA
Large Signal Voltage Gain (V_{CC} = +15 V, V_{EE} = −15 V, V_O = ±10 V, R_L ≥ 10 kΩ)	A_{VOL}	80	300	–	V/mV

The following specifications apply over the operating temperature range.

| Characteristic	Symbol	Min	Typ	Max	Unit
Input Offset Voltage	V_{IO}	–	–	0.73	mV
Input Offset Current	I_{IO}	–	–	1.5	nA
Average Temperature Coefficient of Input Offset Voltage T_A (min) ≤ T_A ≤ T_A (max)	$\Delta V_{IO}/\Delta T$	–	1.0	5.0	μV/°C
Average Temperature Coefficient of Input Offset Current	$\Delta I_{IO}/\Delta T$	–	2.0	10	pA/°C
Input Bias Current	I_{IB}	–	–	10	nA
Large Signal Voltage Gain (V_{CC} +15 V, V_{EE} = −15 V, V_O = ±10 V, R_L ≥ 10 kΩ)	A_{VOL}	60	–	–	V/mV
Input Voltage Range (V_{CC} = +15 V, V_{EE} = −15 V)	V_{ICR}	±14	–	–	V
Common Mode Rejection (R_S ≤ 50 kΩ)	CMR	96	110	–	dB
Supply Voltage Rejection (R_S ≤ 50 kΩ)	PSR	96	110	–	dB
Output Voltage Range (V_{CC} = +15 V, V_{EE} = −15 V, R_L = 10 kΩ)	V_{OR}	±13	±14	–	V

SUGGESTED DESIGN APPLICATIONS

INPUT GUARDING

Special care must be taken in the assembly of printed circuit boards to take full advantage of the low input currents of the LM308A amplifier. Boards must be thoroughly cleaned with alcohol and blown dry with compressed air. After cleaning, the boards should be coated with epoxy or silicone rubber to prevent contamination.

Even with properly cleaned and coated boards, leakage currents may cause trouble at +125°C, particularly since the input pins are adjacent to pins that are at supply potentials. This leakage can be significantly reduced by using guarding to lower the voltage difference between the inputs and adjacent metal runs. The guard, which is a conductive ring surrounding the inputs, is connected to a low−impedance point that is at approximately the same voltage as the inputs. Leakage currents from high voltage pins are then absorbed by the guard.
(1) Power Bandwidth: 250 kHz
    Small Signal Bandwidth:
    3.5 MHz
    Slew Rate: 10 V/μs

(2) $C5 = \dfrac{6 \times 10^{-8}}{R1}$

(3) In addition to increasing speed, the LM101A raises high and low frequency gain, increases output drive capability and eliminates thermal feedback.
