*1 TEST1 are either the time when power is applied or "00000000" is set. Do not attempt to change "00000000" during operation.

"00000000" is returned when reading is made.

*2 No problem in terms of operation occurs even when writing is made to the address 02h to 0Dh & 0Fh, 12h to 1Dh & 1Fh and 72h to 7Dh & 7Fh.

"00000000" is returned when this address is read.

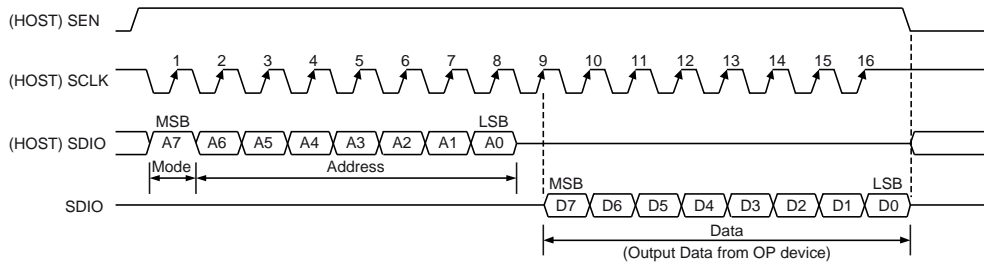

*3 When I performed address reading except the register group set by an SSEL terminal, I keep Hi-Z without paying a value.
