

1.65V – 3.6V, 1x Low EMI Reduction IC

Features

- FCC approved method of EMI attenuation
- Proprietary “SaPhiC™” technology, a non-PLL phase controlled Active EMI management architecture
- Generates a 1X low EMI Phase Modulated replication of the input signal.
- Input frequency range 20~27MHz
- Output frequency range
 - 1MHz to 200MHz @ 2.5V~3.3V
 - 1MHz to 125MHz @ 1.8V
- Multiple Deviation Selections
- Minimum frequency deviation selection capability
- Power Down Mode
- 8-pin WDFN package
- Supports automotive reliability standard:
AEC-Q100 Grade 1 and Grade 2 certified

Product Description

The LX606 is a versatile 1x Active EMI management IC designed to provide system wide reduction of Electromagnetic Interference (EMI) and Radio Frequency Interference (RFI) from clock and data sources. The LX606 allows significant system cost savings by reducing the number of circuit board layers, ferrite beads, shielding and other passive components that are traditionally required to pass EMI regulations. The LX60x family of mobile active EMI management

ICs is unique in its design and is based on LFC's proprietary “SaPhiC™” phase controlled Active EMI management technology. This allows operation on aperiodic as well periodic signals. By the precise placement of the edges of the reconstructed input signal, the peak energy of the output is distributed over a wider and controlled energy band thereby significantly lowering system EMI compared to the typical narrow band signal produced by oscillators and most frequency generators.

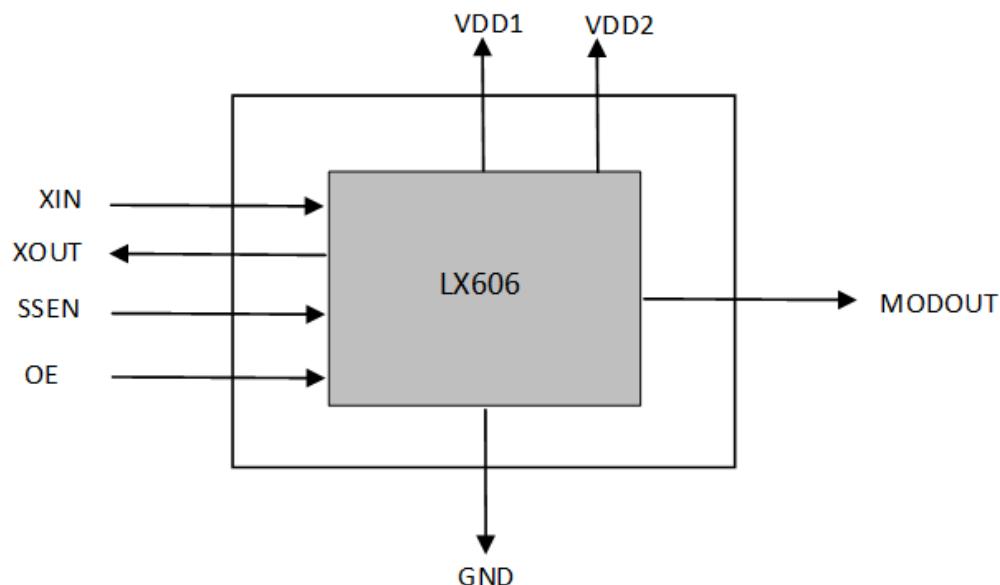

The LX606 has an output frequency range of 1 MHz to 125MHz/200MHz over a wide voltage range of 1.65V to 3.6V. The device can be placed in a “non-modulated clock mode” by setting the SSEN pin to GND where sets the MODOUT pin to no modulated clock output.

The device is available in an 8 pin DFN package.

Applications

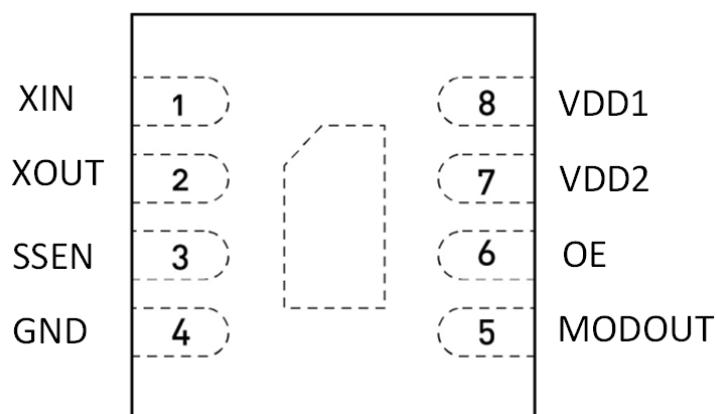

The LX606 is targeted towards mobile platforms such as cell phones, MIDs, notebooks and other “power and space” sensitive applications.

Pin Configuration

Pin Description

Pin#	Pin Name	Typ	Description
1	XIN	I	Crystal Oscillator Input.
2	XOUT	O	Crystal Oscillator Output.
3	SSEN	I	Modulated Clock Output if Pull-Up. No Modulated Clock Output if Pull-Down. Internal Pull-Up Resistor.
4	VSS	P	System ground reference input.
5	MODOUT	O	phase modulated buffered output.
6	OE	O	Clock output if Pull-Up. Hi-Z Output if Pull-Down. Internal Pull-Up Resistor
7	VDD2	P	System Power Supply pin.
8	VDD1	P	System Power Supply pin.

Operating Conditions

Parameter	Description	Min	Max	Unit
