

**COS/MOS INTEGRATED CIRCUIT****PRELIMINARY DATA****3-STAGE COUNTER**

- LOW QUIESCENT POWER DISSIPATION
- WIDE SUPPLY VOLTAGE RANGE: 3 to 15V
- HIGH NOISE IMMUNITY: 45% of  $V_{DD}$  (TYP.)
- INPUTS FULLY PROTECTED
- OUTPUT WAVEFORMS SHAPED for a 25% DUTY CYCLE

The M714 (standard temperature range) is 23-stage binary counter constructed with MOS-P channel and N-channel enhancement mode devices in a single monolithic chip. The device may be used as timing circuit. It consists of 23 flip-flops, two output buffers, providing push-pull operation one zener diode providing transient protection at  $\sim 10V$ , and input inverters for use in a crystal oscillator. The device is available in 14-lead dual in-line plastic or ceramic package.

**ABSOLUTE MAXIMUM RATINGS\***

$V_{DD}^{**}$	Supply voltage	-0.5 to 15 V
$V_I$	Input voltage (at any pin)	$V_{SS} \leq V_I \leq V_{DD}$
$P_{tot}$	Total power dissipation (per package, including zener diode)	200 mW
$T_{stg}$	Storage temperature	-65 to 150 °C
$T_{op}$	Operating temperature	-40 to 85 °C

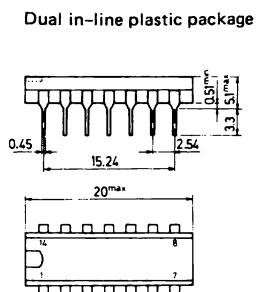

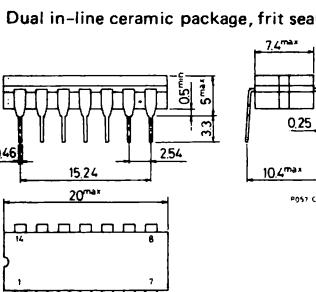

\* Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other condition above those indicated in the "Recommended operating conditions" section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

\*\* With respect to  $V_{SS}$  (GND) pin.

## TYPICAL APPLICATIONS

Digital equipment in which ultra-low dissipation and/or operation using a battery source are primary design requirements.

Accurate timing from a crystal oscillator for timing applications such as wall clocks, table clocks, automobile clocks, and digital timing references in any circuit requiring accurately timed outputs.

Driving miniature synchronous motors, stepping motors, or external bipolar transistors in push-pull fashion.
